
Last Updated January 14, 2020
You’ll soon be able to take a safe vaccine to protect you from getting COVID-19.

It’s free to everyone.

Here’s what you need to know.
Leading with equity: We must build trust.

- Racism runs throughout our social, economic, and health care systems, causing unequal access to care, maltreatment, and neglect for historically marginalized communities. These longstanding and continuing racial and ethnic injustices in our health care system contribute to lack of trust in vaccines.

- North Carolina is drawing upon the experience and expertise of leaders from historically marginalized communities to develop and implement its vaccine plan.
Tested, safe and effective, COVID-19 vaccines will help us get back in control of our lives and back to the people and places we love.

- Scientists had a head start, and thousands of volunteers helped with clinical trials.
- The vaccines are tested, safe, and effective.
- You cannot get COVID-19 from the vaccine.
- Supplies will be limited at first.
- You have a spot to take your shot.
Scientists had a head start.

- COVID-19 vaccines are built on years of work to develop vaccines for similar viruses.
- The first two vaccines use a method that researchers have been studying and working with for decades.

Dr. Kizzmekia Corbett is a viral immunologist at the Vaccine Research Center at the National Institute of Allergy and Infectious Diseases, National Institutes of Health. Dr. Corbett’s team began the first stage of clinical trials. They took the knowledge they gained in the last six years of research and applied it to a vaccine platform in collaboration with Moderna. The vaccine rolled out 10 months later. Dr. Corbett is from Hurdle Mills, NC.
The vaccines are tested, safe, and effective.

• All vaccines are rigorously tested for safety and effectiveness.

• More than 70,000 people volunteered in clinical trials for two vaccines—Pfizer-BioNTech and Moderna—to make sure the vaccines were safe and worked to prevent COVID-19.

• To date, the vaccines are 95% effective in preventing COVID-19.

• There were no serious safety concerns in the clinical trials with either vaccine.

• You could have temporary reactions like a sore arm, headache, or feeling tired and achy for a day or two.
There have been intentional efforts to recruit volunteers from historically marginalized populations.

**You cannot get COVID-19 from the vaccine.**

Vaccines safely increase your body’s natural ability to fight the virus before the virus attacks you. That’s how you win, and the virus loses. Here is how the Pfizer-BioNTech and Moderna vaccines work:

<table>
<thead>
<tr>
<th>Vaccines imitate COVID without giving it to you.</th>
<th>You can fight off the real virus if it tries to attack you.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vaccine</td>
<td>Antibodies</td>
</tr>
</tbody>
</table>

The Pfizer-BioNTech and Moderna vaccines give your body instructions to make a protein that safely teaches your body how to make an antibody to fight the real COVID-19.

After getting vaccinated, you develop the ability to fight off the real virus because your body is strong enough and knows how to win.
Two shots are necessary—and we have a plan to help everyone get both doses.

- The Pfizer-BioNTech and Moderna vaccines require two shots to build up strong immunity against COVID-19.
- The second shot will come 3 to 4 weeks after the first.
- It is important to get two doses of the same vaccine.
- We built a system—the COVID-19 Vaccine Management System—to help make sure people are safe and get the right second dose at the right time.
More than 5.9 million Americans have received their first dose as of 1/7/21

Frank Jones Wilson, Community Leader

Former Governor Jim Hunt
I want to be around my grandkids. I enjoy being out. The sooner people get vaccinated, the sooner we can finally get ahead of this. Just as more and more people began wearing masks, I think we’ll see a growing number of people who want to get vaccinated to protect themselves and others.

- Representative Shelly Willingham
Your privacy and personal information are protected at all times.

- Nothing in the vaccine can be tracked—the protein your body makes cannot be tracked and it disappears after it finishes making you stronger.

- Personal information about your vaccination and health are protected at all times.

- We do not send any personal information to the CDC.
Vaccines will be available to all—for free.

- Supplies will be limited at first.
- The Pfizer-BioNTech and Moderna vaccines have been authorized and sent to states, but it will be some time before they are widely available to everyone.
- The best way to fight COVID-19 is to start first with vaccines aimed at helping to slow the spread and save lives.
- More people will be reached when the vaccine supply increases throughout 2021.
- The vaccines are free to everyone, even if you don’t have health insurance.
- Rest assured: You have a spot to take your shot.
Your best shot at stopping COVID-19.

1. Health Care Workers and Long-term Care Staff and Residents

2. Older Adults

3. Frontline Essential Workers

4. Adults at High Risk for Exposure and Increased Risk of Severe Illness

5. Everyone

Our goal is to vaccinate as many people as quickly as possible given the limited supply of vaccines. North Carolina moves through vaccination groups by aligning to federal priorities while empowering local health departments and hospitals with flexibility to move to the next priority group as they complete groups and have vaccines available.

For more information: YourSpotYourShot.nc.gov
COVID-19 Vaccinations in North Carolina: January 2021

Who is being vaccinated now?

Health care workers: Such as doctors, nurses and those caring for and cleaning areas

Long-term care staff and residents: People living and working in places like skilled nursing facilities or group homes

Older Adults: Limited supplies mean those age 65 and over may have to wait, but they have one of the first spots to take their shot

Where are they being vaccinated?

Health care workers: In hospitals or local health departments that have received early shipments of the vaccine

Long-term care staff and residents: The federal government manages vaccinations for most long-term care facilities. Most will be vaccinated at their facilities under the Pharmacy Partnership for Long-Term Care Program with CVS and Walgreens

Older Adults: Call the COVID-19 line at 1-877-490-6642, visit YourSpotYourShot.nc.gov, or contact their local health department or hospital
North Carolina receives shipments of COVID-19 vaccine each week.

Federal government decides how much vaccine each state receives based on the state’s population.

NC DHHS determines which providers will receive doses based on reaching prioritized populations.

Manufacturer ships the vaccines to local providers.

Providers safely store and handle vaccines.

North Carolinians are vaccinated in groups, as vaccine is available.
Finding your spot: How will you know when and where to get your shot?

• Health care workers should talk with your employer about where your spot is, according to your health and job status.

• Long-term care staff and residents should ask your facility about when you will be able to receive your shot.

• Health departments and hospitals can now vaccinate older adults (age 65+). There will be a wait to receive your vaccine, but you should contact your local health department or hospital to find out when you will be able to make an appointment for your vaccine.

• Additional information on where to take your shot is available by calling the COVID-19 line at 1-877-490-6642 or visiting YourSpotYourShot.nc.gov.
Keeping everyone informed: You have a spot, take your shot.

- We are working hard to give North Carolinians the information they need to take their shot.

- Look for information at news conferences, our website, social media, and from trusted community leaders.

- Community leaders and organizations are helping to shape the campaign and are reaching out to the public.

- The goal is to provide all with a spot for honest information and updates on where they can get their shot.

Keep practicing the 3 Ws: Wear, Wait, and Wash.

• Getting the COVID-19 vaccine and following the 3 Ws is everyone’s best protection from getting and spreading COVID-19.

• Continue using the 3 Ws and limiting social gatherings until most people are vaccinated.

• Getting back in control, getting back to family and friends, and getting kids back to school will take some time—but the COVID-19 vaccine and the 3 Ws will get us there quicker and safer.
Let’s work together to share information.
Help distribute information and materials:

**YourSpotYourShot.nc.gov**

- **Help direct people to “their spot” for reliable information about the vaccine**: Maybe it’s you, now that you have new vaccine knowledge.

- **Show people that you trust the safety and effectiveness of the vaccines**: Share your positive experience when you have your shot against COVID-19—use our tip sheet to create and share your own video to promote vaccination:
  
  [files.nc.gov/covid/documents/vaccines/NC-Vaccine-Selfie-Video-Tip-Sheet.pdf](files.nc.gov/covid/documents/vaccines/NC-Vaccine-Selfie-Video-Tip-Sheet.pdf)

- **Use and share the COVID-19 vaccine communications materials to make sure more North Carolinians have accurate and up-to-date information on the vaccines**: Find them at **YourSpotYourShot.nc.gov**
Let’s talk.
