Executive Summary
This document provides information about the operation, management, and scope of the North Carolina digital preservation program (program), established by the North Carolina Department of Natural and Cultural Resources in accordance with state laws that authorizes the State Archives of North Carolina and State Library of North Carolina to collect and preserve state government information for public access. The program, which supports the preservation and access of authentic digital records throughout their entire lifecycle, provides for strategic decisions about technology and workflows as well as formal structures whereby those records are made available to citizens as part of North Carolina's heritage. Operating principles – from robust administrative support to adoption of best practices and accepted preservation standards – guide the program and its stakeholders. These operating principles call for collaborative efforts stewarded by the State Archives and State Library, efforts that involve managing a record throughout its lifecycle in cooperation with participants from all parts of state government.
North Carolina Digital Preservation Program Overview

Purpose
This document outlines the operation, management, and scope of the North Carolina digital preservation program (program), established by the North Carolina Department of Natural and Cultural Resources in accordance with state laws that authorizes the State Archives of North Carolina and State Library of North Carolina to collect and preserve state government information for public access. The State Archives and State Library work to ensure the historical and cultural legacy of the state manifested in digital form will not be lost to future generations. This commitment is guaranteed through the adoption of strategic and technical measures for the long-term preservation of North Carolina’s digital state government assets, including digital content produced by state and local governments, contained within private collections, and produced by the staff of the State Archives and the State Library. The adoption of the following policies to capture, preserve, and make accessible the digital record of North Carolina’s government and its citizens will ensure the administrative integrity, information authenticity, government transparency, and legislative compliance of the State’s digital assets. This document outlines the State Archives’ and State Library’s strategic approach to minimizing the risks associated with technological changes and ensuring that the records remain reliable and accessible over time, therefore avoiding the costs associated with the potential loss of data and public records.

This document formally supersedes the 2005 *DCR Digital Preservation Policy Framework* and the 2014 North Carolina Department of Cultural Resources Digital Preservation Policy.\(^1\) It is consistent with the State Archives’ core mandates as authorized by GS §132 and GS §121 to “preserve and administer, in the North Carolina State Archives, such public records as may be accepted into its custody, and to collect, preserve, and administer private and unofficial historical records and other documentary materials relating to the history of North Carolina…”\(^2\) and the State Library’s mandate GS § 125, which charges the State Library as the “official, complete, and permanent depository for all State publications.”\(^3\)

This document policy acknowledges that a viable and successful digital preservation program requires an ongoing commitment of resources—financial, technical, and human—from the State Archives and State Library. As technologies mature and become viable options for digital preservation, State Archives and State Library staff will continue to identify, assess, procure, and implement technical digital preservation environment solutions.

Audience
The intended audience for this document includes:

- State agency staff responsible for the maintenance and preservation of digital records for the State of North Carolina, including members of the State Archives of North Carolina, State Library of North Carolina, DNCR information technology, and the Department of Information Technology.

---

2 G.S. §121-4 “Powers and duties of the Department of Cultural Resources”
3 G.S. §125-11.7 “State Library designated the official depository for all State publications”
North Carolina Digital Preservation Program Overview

- Creators of digital records that may be held in the North Carolina Digital Repository. This includes employees of state and local governments, as well as private donors whose private papers and collections may be donated to the State Archives.
- Members of the public, for whom the digital records and assets of the state are being preserved.

Objectives

The digital preservation program is intended to preserve, maintain, and make accessible digital state government assets as well as assets in the private collections, including those originating in digital format, sometimes referred to as “born digital”, and those transformed to a digital form and referred to as “digitized.”

The primary objectives of the digital preservation program are to:

- Preserve digital North Carolina assets that are either born digital or digitized. Retain a copy of the original bit stream of born digital material appraised as being archival for authenticity purposes, as well as potential access in the future. These assets include state government information as well as materials in its private collections.
- Where necessary, migrate records into formats that are acceptable for long-term preservation and access.
- Make strategic decisions, based on long-term resources, system sustainability, and identified efficiencies, to establish processes and technologies that support both the Trusted Digital Repository standard (ISO 16363) and the Open Archival Information System (OAIS) reference model (ISO 14721).
- Ensure record authenticity through preservation and technical solutions that promote and maintain composition (especially for assets with multiple objects or files), lineage, fixity, and validity.
- Establish operational processes and procedures to meet archival requirements pertaining to provenance, chain of custody, authenticity, and integrity.
- Provide tools that facilitate the discovery of online digital assets from the State Archives and State Library.
- Define policies and procedures for the preservation and availability of digital assets while maintaining intellectual property ownership and rights.
- Make strategic decisions, based on long-term resources, system sustainability, and identified efficiencies, to maintain a technical and operational infrastructure based on the conceptual framework of ISO 14721 OAIS.
- Automate preservation processes as technical capabilities and resources—financial and human—allow.
- Support and manage storage media for archival copies and their derivatives in accordance with environmental, quality control, security, and other standards. Sustain a storage architecture that provides strategically selected redundancy in the event of technical failure, natural disaster, or human error.
Scope
The program is responsible for identifying, securing, and providing the means to preserve and ensure ongoing access to digital state government assets. Examples of digital assets include relatively simple formats such as word processing documents, spreadsheets, digital publications, or digital images, and complex application-specific digital assets such as email, websites, databases, and geospatial datasets. To become part of the digital preservation program, a digital asset will be evaluated in accordance with records retention and disposition schedules and appraisal of its long-term or permanent value to the State of North Carolina. Digital assets selected for permanent retention will have ongoing usefulness or significance, based on the administrative, legal, fiscal, evidential, or historical information they contain that justifies their continued preservation. The following types of materials will be included under this program:

- Records and publications that contain scanned or digitized material for which no analog counterpart exists;
- Born-digital assets produced by state government agencies;
- Born-digital assets produced by local government agencies;
- Approved unique materials that are part of a non-governmental collection at the State Archives or State Library; and
- Archives or Library materials that are digitized and identified for long-term digital retention.

With the ever-growing volume of digital information, the State Archives and the State Library may need to allocate priorities for preservation action based on the relative significance of digital assets and the technical complexity of preserving and ensuring access to those assets.

Operating Principles
The State Archives’ and State Library’s digital preservation objectives are best achieved through the development of practices that comply with an adequate, coherent, and widely understood framework for reliable, accountable, and manageable digital archives. The digital preservation program is based on the following principles:

- A collaborative approach to realizing a digital preservation program involving stakeholders, both within North Carolina and the nation, at all levels of planning, development, and implementation.
- Ongoing, sustained support and engagement from the Department of Natural and Cultural Resources (DNCR) management, information technology professionals, and the content and records creators.
- Development of an interoperable digital repository framework using the best technology available—commercially or in house—incorporating open source options whenever feasible.
- Implementation of a range of community-based standards, best practices, and national and/or international standards that inform preservation procedures and technology as well as archival requirements such as provenance, chain of custody, intellectual property rights, and authenticity.
- To the best of our capability, compliance with ISO 14721 OAIS reference model and ISO 16363 Trusted Digital Repository Standard for preservation, as well as with all requirements of
the North Carolina Uniform Electronic Transactions Act (UETA)\(^4\) that pertain to the delivery of
digital content to the public.

- Development of consistent documented guidelines and procedures for each stage of the
  lifecycle (i.e., creation, selection, acquisition, ingest, preservation action—including
  reformatting and producing derivatives—storage, identification/cataloging, access and use,
  transform, dispose).\(^5\)

- Ongoing communication with peer institutions about opportunities for improved processes,
  monitoring the landscape for services offered by third party vendors and participation in
  national research projects regarding digital preservation.

- Review of policies and procedures on a regular basis, taking into account changes in the
  organizational, legal, and technical environment of the State Archives, State Library, and
  government statewide.

**Roles & Responsibilities**

The Department of Natural and Cultural Resources (DNCR) serves as the lead agency for digital
preservation in North Carolina state government responsible for supporting and sustaining the
statutory responsibilities of the State Archives and the State Library to preserve and provide public
access to print and digital state government information and materials in private collections and
coordinating stakeholder involvement and collaboration within and outside state government.
Primary stakeholders in the digital preservation of state government information include:

- **DNCR management**: It is the responsibility of DNCR management to provide adequate
  managerial and financial commitment for the digital preservation program. As resource
  commitments are made, management should take into consideration the extent to which digital
  preservation can enhance or replace existing services and functions.

- **State Archives and State Library Staff**: Traditionally, responsibility has been divided
  between the State Archives and the State Library for records and publications. Expertise from
  both programs will ensure that all digital content in scope is collected and preserved.

- **Digital record producers / contributors**: The producers and contributors of the digital
  records will be responsible for complying with established submission requirements and
  working with the management of the digital archive to ensure successful transfer. Records
  producers will have the same financial responsibilities for preparing digital records as they
  currently do analog records.

- **State agencies and local government**: As with analog materials, state agencies and local
  governments are responsible for collaborating with DNCR in order to manage their digital
  assets and transfer them to the State Archives and State Library as necessary, according to
  their retention schedule and clearinghouse guidelines.

- **DNCR-IT**: The preservation of digital materials requires a much higher level of involvement
  of information technology experts than needed with analog materials. DCNR-IT needs to assist

\(^5\) Lifecycle management of digital assets is based on the Digital Curation Centre’s Lifecycle Model.
the State Archives and State Library with the purchase, configuration, customization (custom development), and maintenance of hardware and software solutions as well as the network infrastructure.

- **Department of Information Technology (DIT):** For the program to have a true lifecycle approach to the management of digital assets, recognition and collaboration with statewide ITS management is needed to manage content from creation to disposition.

**Collaboration / Cooperation**
DNCR is committed to supporting collaboration internally between the State Archives and the State Library, as well as externally with local and state government and other institutions, both within the state of North Carolina and nationally to advance the development of the digital preservation program, share lessons learned with other digital preservation programs, extend the breadth of available expertise, and extend the digital content that is available to the public through cooperative efforts.

DNCR will:
- Identify appropriate partners and stakeholders able to contribute to the statewide effort.
- Establish agreements regarding responsibilities and roles.
- Pursue agreements that provide a reliable basis for ongoing accessibility over time.
- Help identify and develop policies, procedures, and tools to support the management and preservation of digital information.
- Work with creators, publishers, and re-users of digital content to encourage practices that will enable, rather than hinder, preservation.
- Work with government agencies and officials to develop legislative and funding frameworks that will enable cost-effective preservation.

**Technical Principles**

**Authenticity**
The State Archives and State Library strive to ensure the authenticity of digital resources; the mutable nature of digital assets opens the possibility for unauthorized and undetectable changes. Confidence in the authenticity of digital records over time is particularly crucial owing to the ease with which alterations can be made. From the moment that digital resources are acquired, the State Archives and State Library undertake protective procedures to prevent, discover, and correct loss or corruption of digital assets due to either inadvertent or malicious intent. In addition, the Archives and Library staff will endeavor to secure supporting evidence, ideally in the form of metadata, from those creating the resources. This will enable those who access the resources to evaluate the authenticity of all preserved digital resources.

**Metadata**
Metadata (descriptive, preservation and administrative) is fundamental to preserving and providing access to the State Archives’ and State Library’s digital assets. The preservation process includes maintenance of metadata submitted with the digital asset as well as the creation of additional
metadata to manage the long-term/active preservation and access of that asset. The Archives and Library staff are committed to identifying and collecting the needed metadata to preserve digital assets in its collection and to provide access to those assets.

**Formats**

In acquiring digital materials, the State Archives and State Library will define and communicate levels of preservation appropriate to each type of format. The State Archives and State Library reserve the right to assign different preservation standards to different file formats. Please see *File Formats for Transfer of Electronic Records to the State Archives of North Carolina* document for current standards.

**Access/Use**

The purpose of preserving digital assets is to ensure that the assets remain accessible in the future. The State Archives and State Library must provide access using the most up-to-date technology available. For data that end users may download to their own computers, users will need to be informed of what software is necessary to render the digital record. Where possible, the State Archives and State Library will strive to make digital records available in openly-documented formats for which rendering tools are readily available (e.g. PDF files, TIFF files, WAVE files).

In some cases, the digital record may be so tightly coupled with its originating software program that the record can only be rendered through the application used to create the digital record (e.g. Esri Geodatabases). In order to ensure continued access, the State Archives and State Library may migrate assets to a new format. Some information may be lost during the migration but the fundamental information in the records will be accessible. However, the State Archives and State Library, as part of their preservation program, will maintain the original bit stream of archival digital materials and make that available should it be needed. Sensitive and confidential information will require appropriate restrictions for access and use. Content intended for public dissemination will be available for public use.

**Document Updates**

This document may be revised and updated at any time, in order to reflect technological, infrastructural, and operational developments in the digital preservation program. The document is intended to be updated at least biennially.

---

References

Glossary

Access: The permission to locate and retrieve information for use within legally established restrictions of privacy, confidentiality, and security clearance.

Authenticity: A quality of a digital resource to be judged trustworthy and genuine based on internal and external evidence.

Born-digital: Information created in electronic format. Born-digital information is distinguished from information that was created in another format and digitized through scanning or digital photography, creating a digital surrogate. A document created using a word processor may be described as born-digital.

Digital asset: digital content that has value based on the administrative, legal, fiscal, evidential, or historical information it contains. Digital assets can consist of born-digital or digitized content.

Digital (electronic) content: Data or information that has been captured and fixed for storage and manipulation in an automated system and that requires the use of the system to render it intelligible by a person. This definition encompasses records and publications.

Digitization: The process of transforming analog material into digital (electronic) form, especially for storage and use in a computer. Also referred to as scanning or imaging.

Digital Preservation: The management of digital information to allow for access to authentic copies over time.

Fixity: The quality of being stable and resisting change. Mechanisms such as checksums or cyclical redundancy checks can record a fixity value for a digital object, and can be used as a basis of later comparison to ensure that the digital object has not been altered.

Lifecycle: The series of activities required to manage digital assets throughout their existence.

Metadata: Information that describes significant aspects of a resource. Preservation metadata are required to describe, manage, and preserve digital resources over time and will assist in ensuring essential contextual, administrative, historical, and technical information are preserved along with the digital resource.

Open Archival Information System (OAIS): An archive, consisting of an organization of people and systems that has accepted the responsibility to preserve information and make it available for a Designated Community. It meets a set of responsibilities, as defined in 3.1, that allows an OAIS archive to be distinguished from other uses of the term archive. The term Open in OAIS is used to imply that this Recommendation and future related Recommendations and standards are developed in open forums, and it does not imply that access to the archive is unrestricted.

Permanent value: The ongoing usefulness or significance of records, based on the administrative, legal, fiscal, evidential, or historical information they contain that justifies their continued preservation.

Preservation: A series of active managed activities and processes involved in the physical and intellectual protection of administrative, legal, fiscal, evidential, historical information and cultural materials. Preservation encompasses a host of policies, procedures, and processes that together sustain access or prevent further deterioration to the materials chosen to save.
Provenance: The source and ownership history of a (digital) resource.

**Trusted Digital Repository (Repository):** A repository whose mission is to provide reliable, long-term access to managed digital resources to its designated community, now and in the future. A critical component is the ability to prove reliability and trustworthiness over time.
