I. VW Phase 1 Funding Overview

Program Details

In June 2019, North Carolina Department of Environmental Quality solicited applications for two grant programs: the Diesel Bus and Vehicle Program and Zero Emissions Vehicle Infrastructure Program. These programs are part of the North Carolina VW Settlement Program using the state's allocation of the Volkswagen Mitigation Settlement. In Phase 1 of the program, \$24.5 million in funds was allocated to the Diesel Bus and Vehicle Program to assist interested parties to mitigate NOx emissions by replacing or repowering older diesel heavy duty vehicles and equipment. Additionally, \$4.6 million was allocated to the Zero Emissions Vehicle Infrastructure Program to increase the installation of direct current fast charging stations for electric vehicles primarily along identified priority corridors on North Carolina interstates and pending interstates.

Eligible applicants included:

- projects submitted by local, state, and tribal government organizations,
- projects submitted by public or private nonprofit organizations (Incorporated Nonprofit – an organization as described in section 501(c)(3) of the Federal Internal Revenue Code of 1954, as amended. The organization must be incorporated under NC law or registered with the NC Department of the Secretary of State), and
- projects submitted by public-private partnerships where the lead applicant represents a public sector, public or private nonprofit organization.

Projects were eligible for funding up to 100% of the replacement or repower cost for vehicles and the cost of the installation of new ZEV charging infrastructure for government owned vehicles and charging infrastructure. Non-government applicants were subject to a mandatory maximum cost share of 20% per the Volkswagen Consent Decree. For projects that were public-private partnerships, the ownership of the original and replacement equipment/vehicle or charging infrastructure determined the maximum funding percentage. Applications for both programs were accepted until September 30, 2019. 116 applications were received with a total of 102 applications found eligible for funding between the two released RFPs. 70 applications were selected for full or partial funding.

Next Steps

- Week of July 13, 2020
 - DAQ VW Phase 1 presentation to DEQ Management
 - Award and decline letters prepared
- Week of July 20, 2020
 - Award notifications sent to applicants
 - D-4 funding paperwork prepared for approval to submit to VW Mitigation Trustee
- Week of August 3, 2020
 - Approval to submit D-4 funding requests to VW Mitigation Trustee
- Sixty-five days after D-4 submitted
 - Approval or denial of D-4 requests by VW Mitigation Trustee
 - Release ZEV Level 2 Rebate Program Request for Proposals
- Three to four months
 - Contracts fully executed for Diesel and DC Fast applications, project work begins
 - ZEV Level 2 rebate claims anticipated in Grant Management System (GMS)
 - Begin Phase 2 planning and stakeholder process
- Spring/Summer 2021
 - Claims entered in GMS for Diesel and DC Fast Program projects for reimbursement

Phase 1 Program Funding

Program	Eligible Fuels	Number of Applications Received	Phase 1 Funding		
			Targeted Percent	Funding Amount	
Off-road/DERA	All (diesel, propane, natural gas, electric)	6	10%	\$3,068,189	
On-road	All (diesel, propane, natural gas, electric)	33	10%	\$3,068,189	
School Bus	Diesel	8	25%	\$7,670,472	
	Propane & Natural Gas		10%	\$3,068,189	
	All-electric		5%	\$1,534,094	
Transit Bus	All (diesel, propane, natural gas, electric)	14	20%	\$6,136,377	
ZEV Charging	DC Fast Charging	55	15%	11.25%	\$3,451,712
	Level 2 Charging	NA*		3.75%	\$1,150,571

*The Level 2 Charging RFP will be a rebate program and will not be released until DEQ is able to request funds from the Volkswagen Mitigation Fund Trustee.

Application Review

After initial review and scoring by the program managers and the secondary reviewers, project applications for each program were submitted to program specific internal selection committees made up of other DEQ employees not directly involved with Volkswagen Mitigation Trust team for funding selections. Each selection committee made decisions on project funding independently of the other selection committees.

Selected Projects

Program	Program Allocation	Fuel Type	Applications Selected for Funding	Number of Vehicles Funded	Annual Tons of NO _x Reduced	Total Amount Funded
Off-Road*	\$3,068,189	Diesel	1	0	0.0	\$0
On-Road**	\$3,068,189	Diesel	17	40	10.0	\$3,046,859
		CNG		5	0.8	\$1,193,550
On-Road Totals				45	10.8	\$4,240,409
School Bus	\$12,272,755	Diesel	6	85***	5.3	\$8,050,598
		Propane		20	1.4	\$2,087,371
		Electric		6	0.6	\$2,151,931
School Bus Totals				111	7.3	\$12,289,900
Transit Bus	\$6,136,377	Bi-fuel	13	1	0.1	\$75,000
		CNG		1	0.3	\$550,000
		Diesel		3	0.3	\$339,750
		Electric		9	5.0	\$3,887,877
		Hybrid		2	0.9	\$1,280,000
Transit Bus Totals				16	6.6	\$6,136,377
ZEV Charging - DC Fast	\$3,451,712	NA	33	33 charging stations	3.0	\$3,415,748
Total	\$27,997,222		69	172 vehicles and 33 DC Fast stations	27.7	\$26,082,434

*Off-Road awardee declined the award. Funds will be applied to Phase 2

** Includes unawarded funds from Off-Road (\$1,169,344.34) and DC Fast (\$16,737.61) Programs

*** Includes unawarded funds (\$17,144.66) from Off-Road Program

A total of 172 vehicles will receive full or partial funding for replacement or repower and a total of 33 DC Fast charging stations will receive funding for the installation of charging equipment.

II. Off-Road Program Selection Committee Report

Program Details

In June 2019, North Carolina Department of Environmental Quality (NCDEQ) released the “North Carolina Volkswagen Settlement Program Phase 1 Diesel Bus and Vehicle Programs” Request for Proposals (RFP). In this RFP, \$3,068,189.00 was allocated to the North Carolina Clean Heavy-duty Off-Road Equipment Replacement Program. After initial review and scoring by the program manager (Jill Vitas) and the secondary reviewer (Melanie Henderson), project applications for off-road vehicle/equipment replacements were submitted to an internal selection committee made up of other DEQ employees not directly involved with Volkswagen Mitigation Trust team for funding selections. The selection committee for this program consisted of Rahatal Ashique, Ethan Brown, Matthew Mahler, Brian Phillips (non-voting member), and Jill Vitas (non-voting member).

Total funds available for program:	\$3,068,189
Number of eligible applications received:	1
Total requested VW funds for all applications received:	\$1,881,700
Number of applications selected for full funding:	1
Number of applications selected for partial funding:	0
Total estimated NOx emissions reductions (annual tons):	4.1
Total requested VW funds for applications selected:	\$1,881,700
Total project costs for applications selected:	\$1,881,700
Number of urban/suburban applications selected for funding:	0
Total amount of awarded funds for selected urban/suburban projects:	\$0
Percent urban/suburban funding:	-
Number of rural applications selected for funding:	1
Total amount of awarded funds for selected rural projects:	\$1,881,700
Percent rural funding:	100%
Number of diesel vehicle replacements funded:	0
Number of diesel vehicle repowers funded:	0
Number of alternative fueled vehicle replacements/repowers funded:	0
Number of electric-only vehicle replacements/repowers funded:	0
Electric vehicle infrastructure costs:	0

Method used to select applications:

There was one eligible project submitted for consideration for funding to replace or repower off-road vehicles or equipment as outlined under the 2019 “North Carolina Volkswagen Settlement Program Phase 1 Diesel Bus and Vehicle Programs” RFP. This proposal from the North

Carolina Department of Transportation, Ferry Division was for the repowering of four diesel engines on two ferries.

Off-road applications as well as the individual vehicles within each application were scored and ranked using the scoring criteria outlined in the Phase 1 Diesel Bus and Vehicle Program RFP. One application was received that was eligible under the off-road program criteria and two applications were eligible under the EPA Diesel Emission Reduction Act (DERA) option. The decision was made to fund the two DERA projects using DERA only funding without VW matching funds. Because the total funding for the one off-road project at \$1,881,700 was under the total available funds for Phase 1, the selection committee decided to fully fund the project.

Types of vehicles:

This program will award funding for the repowering of four diesel powered marine propulsion engines on two ferries. All engines in the off-road application were a replacement of diesel to a newer, cleaner diesel technology. No alternatively fueled or electric vehicles were included in the application received.

Final Note:

The awarded applicant, NC DOT Ferry Division, declined their award due to cost increases for the project and continued budget issues within the Department. The unspent funds will be added to Phase 2 available funds.

III. Off-Road Program Funded Projects Map

Off-Road Vehicles - Ferries

IV. On-Road Program Selection Committee Report

Program Details

In June 2019, North Carolina Department of Environmental Quality (NCDEQ) released the “North Carolina Volkswagen Settlement Program Phase 1 Diesel Bus and Vehicle Programs” Request for Proposals (RFP). In this RFP, \$3,068,189 was allocated to the North Carolina Clean Heavy-duty On-Road Equipment Replacement Program. After initial review and scoring by the program manager (Jill Vitas) and the secondary reviewer (Sheila Blanchard), project applications for on-road vehicle/equipment replacements were submitted to an internal selection committee made up of other DEQ employees not directly involved with Volkswagen Mitigation Trust team for funding selections. The selection committee for this program consisted of Rahatal Ashique, Ethan Brown, Matthew Mahler, Brian Phillips (non-voting member), and Jill Vitas (non-voting member).

Total funds available for On-Road program:	\$3,068,189
Unawarded funds added from Off-Road program:	\$1,169,344
Unawarded funds added from DC Fast program:	\$16,738
Revised total funds available for On-Road program:	\$4,254,271
Number of eligible applications received:	30
Total requested VW funds for all applications received:	\$12,965,887
Number of applications selected for full funding:	12
Number of applications selected for partial funding:	5
Total estimated NOx emissions reductions (annual tons):	10.8
Total awarded VW funds for vehicles selected:	\$4,240,409
Total project costs for vehicles selected:	\$6,423,580
Number of urban/suburban vehicles selected for funding:	29
Total amount of awarded funds for selected urban/suburban vehicles:	\$2,982,679
Percent urban/suburban funding:	70.3%
Number of rural vehicles selected for funding:	16
Total amount of awarded funds for selected rural vehicles:	\$1,257,730
Percent rural funding:	29.7%
Number of diesel vehicles replacements/repowers funded:	40
Number of alternative fueled vehicle replacements/repowers funded:	5
Number of electric-only vehicle replacements/repowers funded:	0
Electric vehicle infrastructure costs:	\$0.00

Method used to select applications:

There were 30 eligible projects representing 78 individual vehicles submitted for consideration for funding to replace on-road diesel vehicles as outlined under the 2019 “North Carolina Volkswagen Settlement Program Phase 1 Diesel and Vehicle Programs” Request for Proposals. Eleven projects were fully funded, and four projects were partially funded (multi-vehicle projects where one or more vehicles but not all vehicles were funded). These included one large proposal from American Lung Association in partnership with Sysco for the purchase of 20 short-haul combo vehicles which will achieve 6.2 tons of NOx reductions of the total anticipated of 10.8 tons. The remaining 25 funded vehicles come from a variety of projects including refuse haulers, dump trucks, and debris trucks.

Projects and individual vehicles were scored and ranked using the scoring criteria outlined in the Diesel Bus and Vehicle RFP. Because of the variety of vehicle types submitted in the 30 projects, the On-Road Selection Committee opted to evaluate individual vehicles instead of whole projects when making determinations of how to award funding.

When considering which vehicles to fund, all committee members determined to allot funding to the highest scoring vehicles. These vehicles scored highest based on several factors, most importantly NOx reduction, cost effectiveness, and location. This method resulted in full funding of 45 vehicles. The committee did not take fuel type into consideration when making selections.

The committee also gave priority to the commitment of North Carolina to fund both urban/suburban and rural projects. North Carolina is committed to spending 32% of the VW Settlement funding on rural projects and this is the split that was used in determining the funding levels for urban/suburban and rural vehicles.

Types of vehicles:

Awards provide funding to 40 new diesel vehicles and five new compressed natural gas vehicles. Because the committee decided to fund vehicles based on “total score” the four electric vehicle replacements submitted did not score high enough for funding.

Additional funding opportunity:

Under the umbrella of the diesel bus and vehicle program, the off-road allotment of funding did not receive applications for the entire \$3,068,189 allocated to the program. An excess of \$1,186,489.00 off-road funds was not awarded of which \$1,169,344.34 was reallocated to the on-road program and \$17,144.66 to the school bus program in Phase 1. Additionally, the DC Fast program had an excess of \$16,737.61 not awarded and was also added to the on-road program for projects. This in addition to the \$40,869.97 in on-road funding allocation not awarded results in an additional \$1,226,951.92 available for on-road vehicle funding. This changes the total overall funded amount for on-road vehicles to \$4,240,409.36.

V. On-Road Program Funded Projects Map

On-Road Vehicles

VI. School Bus Program Selection Committee Report

Program Details

In June 2019, North Carolina Department of Environmental Quality (NCDEQ) released the “North Carolina Volkswagen Settlement Program Phase 1 Diesel Bus and Vehicle Programs” Request for Proposals (RFP). In this RFP, \$12,272,755.00 was allocated to the North Carolina School Bus Replacement Program. After initial review and scoring by the program manager (Sheila Blanchard) and the secondary reviewers (Jill Vitas and Brian Phillips), project applications for school bus replacements were submitted to an internal selection committee made up of other DEQ employees not directly involved with Volkswagen Mitigation Trust team for funding selections. The selection committee for this program consisted of Sheila Blanchard (non-voting member), Heather Murphy, Brian Phillips (non-voting member), Scott Sanders and Lisa Whitaker.

Total funds available for program:	\$12,272,755	
Unawarded funds added from Off-Road program:	\$17,144,66	
Revised total funds available for School Bus program:	\$12,289,900	
Number of eligible applications received:	6	
Total requested VW funds for all applications received:	\$13,410,965	
Number of applications selected for full funding:	4	
Number of applications selected for partial funding:	2	
Total estimated NOx emissions reductions (annual tons):	7.3	
Total VW funds for buses selected:	\$12,289,900*	
Total project costs for buses selected:	\$12,821,557*	
Number of urban/suburban buses selected for funding:	43	
Total amount of awarded funds for selected urban/suburban buses:	\$5,054,226	
Percent urban/suburban funding:	41.1%	
Number of rural buses selected for funding:	68	
Total amount of awarded funds for selected rural buses:	\$7,235,674*	
Percent rural funding:	58.9%	
Number of diesel buses funded:	85	
Number of alternative fueled (Propane) buses funded:	20	
Number of electric-only buses funded:	6	
Electric vehicle infrastructure costs awarded with VW funds:	\$377,750	
Target Funding Amounts**		
Fuel Type	Targeted Percent	Funded Percent
Diesel	25%	26%
Propane and Natural Gas	10%	7%
Electric	5%	7%

*includes \$17,144,66 from Off-Road program

**Targeted funding amounts based on total funding allotment of \$30,681,886 for Phase 1 in the Mitigation Plan.

Method used to select applications:

There were six eligible projects submitted for consideration for funding to replace buses as outlined under the 2019 “North Carolina Volkswagen Settlement Program Phase 1 Diesel and Vehicle Programs” RFP. These included one large proposal from Department of Public Instruction for 113 school buses and five projects from the remaining entities for eight activity buses and one school bus. Of the six eligible projects, there were three multi-vehicle projects (DPI for 113 buses, Halifax County for three buses, and Polk County for three buses). There were 122 buses submitted for replacement.

Projects and individual vehicles were scored and ranked using the scoring criteria outlined in the Diesel Bus and Vehicle RFP. Because of the relative size of the DPI project compared to the other submitted projects, the School Bus Selection Committee opted to evaluate individual vehicles instead of whole projects when making determinations of how to award funding.

When considering which vehicles to fund, the selection committee determined to allot funding to the highest scoring vehicles. These vehicles scored highest based on several factors, most importantly NOx reduction, cost effectiveness, and location. This method resulted in full funding (at 100%) of 110 buses and 1 bus partially funded at 36.3% by multiple program funds (\$16,760.00 from school bus funds, and the remaining \$17,144.66 funded using the leftover off-road program grant funds). This committee did not take fuel type into consideration when making selections. However, upon final review of the selection committee choices, final funding selections were made based on the fuel allocations as specified in the RFP. This resulted in replacement of five diesel buses slated for funding, by five propane buses.

The committee also gave priority to the commitment of North Carolina to fund both urban/suburban and rural projects. Although North Carolina is committed to spending 32% of the VW Settlement funding on rural projects, 62.1% of buses in the applications received for replacement were located primarily in rural areas. While all urban/suburban buses submitted were funded, the final split resulted in 58.9% of the money going to rural replacements and 41.1% of money going to urban/suburban replacement.

Types of vehicles:

This program will award funding to six new electric buses and infrastructure, 20 propane buses, and 85 diesel buses. Because we did not have enough funding requests for the allocated amounts as specified by the RFP, the unallocated propane funds (\$980,818) went to funding one electric school bus (\$372,270) and remaining diesel school buses on a contingency basis (\$608,548).

VII. School Bus Program Funded Projects Map

VIII. Transit Bus Program Selection Committee Report

Program Details

In June 2019, North Carolina Department of Environmental Quality (NCDEQ) released the “North Carolina Volkswagen Settlement Program Phase 1 Diesel Bus and Vehicle Programs” Request for Proposals (RFP). In this RFP, \$6,136,377.00 was allocated to the North Carolina Transit Bus Replacement Program. After initial review and scoring by the program manager (Melanie Henderson) and the secondary reviewer (Dave Willis), project applications for transit/shuttle bus replacements were submitted to an internal selection committee made up of other DEQ employees not directly involved with Volkswagen Mitigation Trust team for funding selections. The selection committee for this program consisted of Chris Bryant, Melanie Henderson (non-voting member), Jeffrey Nelson, Brian Phillips (non-voting member), Katherine Quinlan and Jennifer Sides.

Total funds available for program:	\$6,136,377		
Number of eligible applications received:	13		
Total requested VW funds for all applications received:	\$13,158,396		
Number of applications selected for full funding:	6		
Number of applications selected for partial funding:	7		
Total estimated NOx emissions reductions (annual tons):	6.6		
Total requested VW funds for applications selected:	\$6,136,377		
Total project costs for applications selected:	\$9,740,642		
Number of urban/suburban transit buses selected for funding:	11		
Total amount of awarded funds for selected urban/suburban transit buses:	\$4,934,877		
Percent urban/suburban funding:	80.4%		
Number of rural transit buses selected for funding:	2		
Total amount of awarded funds for selected rural transit buses:	\$1,201,500		
Percent rural funding:	19.6%		
Electric vehicle infrastructure costs awarded with VW funds:	\$968,358		
Fuel Type	Number of Buses	VW Funded Amount	VW Funded Percent*
Bi-fuel	1	\$78,750	1.3%
Natural Gas (CNG)	1	\$550,000	9.0%
Diesel	3	\$339,750	5.5%
Electric	9	\$3,887,877	63.4%
Hybrid	2	\$1,280,000	20.9%

*Percentage of program allocation of \$6,136,377.

Method used to select applications:

There were thirteen eligible projects submitted for consideration for funding to replace transit buses as outlined under the 2019 “North Carolina Volkswagen Settlement Program Phase 1 Diesel Bus and Vehicle Programs” Request for Proposals. These included proposals from various transit authorities across the state, universities, city, and county governments. Of the thirteen eligible projects, there were six multi-vehicle projects (Cape Fear Public Transportation Authority for four transit buses, UNC Asheville for two buses, the City of Salisbury for 4 buses, Orange County for three buses, Charlotte Area Transit System for seven buses and the City of Fayetteville for four buses). One unique project is a school bus used to transport citizens to a community center, because the school bus replacement program requires school buses to solely transport children to and from school was evaluated under the transit/shuttle bus program. There was a total of 31 eligible transit/shuttle buses submitted for replacement.

Projects as well as individual vehicles were scored and ranked using the scoring criteria outlined in the RFP. The VW Transit/Shuttle Bus Selection Committee determined that it was best to evaluate individual vehicles instead of whole projects when making determinations where funding should be awarded.

When considering which vehicles to fund, the first focus was given to the highest scoring vehicles. These vehicles scored highest based on several factors, most importantly NOx reduction, cost effectiveness, and project location.

The committee also gave priority to the commitment of North Carolina to fund both urban/suburban as well as rural projects. Although the state is committed to spending 32% of the overall VW Settlement funding on rural projects, only two applications received for the Transit Shuttle Bus Program were from a rural area. It was the committee’s decision to fully fund both rural applications in Phase 1 to help meet this goal overall for all programs.

The selection committee determined that best use of funding would be to distribute funds to as many of the applicants as possible. This decision was made primarily due to the levels of funding requested for many of the smaller suburban projects versus the larger dollar amounts from some of the larger urban areas. The selection committee ultimately wanted to maximize the impact across the entire state. Taking this into consideration as well as how individual vehicles ranked overall, the committee made the decision that most projects would receive funding for all or a portion of one bus. The only bus to receive partial funding was the most expensive and least cost effective of all buses.

Types of vehicles:

Transit buses selected for funding include: one bi-fuel, one CNG, three diesel, two hybrid and nine new electric transit buses (one partially funded) with charging infrastructure.

IX. Transit Bus Program Funded Projects Map

-  Diesel Transit Buses
  Electric Transit Buses
  Hybrid Transit Buses

-  Bi-fuel Transit Buses

X. DC Fast Program Selection Committee Report

Program Details

In June 2019, North Carolina Department of Environmental Quality (NCDEQ) released the “North Carolina Volkswagen Settlement Program Phase 1 Zero Emission Vehicle Infrastructure Program” Request for Proposals (RFP). The state has committed to spending the full maximum allowable fifteen percent of the VW Settlement funds on zero emission vehicle charging infrastructure. In this RFP, \$3,451,712 was allocated to DC Fast Charging Stations. All DC Fast charging stations were required to be publicly accessible. After initial review and scoring by the program manager (Dave Willis) and the secondary reviewer (Steven Rice), project applications for DC Fast Charging Stations were submitted to an internal selection committee made up of other DEQ employees not directly involved with Volkswagen Mitigation Trust team for funding selections. The selection committee for this program consisted of Keith Bamberger, Starlette Hodge, Ryan Mills, Cynthia Moseley, Brian Phillips (non-voting member), and Dave Willis (non-voting member).

Total funds available for program:	\$3,451,712
Number of eligible applications received:	52
Total requested VW funds for all applications received:	\$5,539,613
Number of applications selected for full funding:	32
Number of applications selected for partial funding:	1
Total estimated NOx emissions reductions (annual tons):	3.0
Total requested VW funds for applications selected:	\$3,434,974
Total project costs for applications selected:	\$4,863,782
Number of urban/suburban applications selected for funding:	18
Number of charging ports funded in urban/suburban counties:	31
Total amount of awarded funds for selected urban/suburban projects:	\$2,106,103
Percent urban/suburban funding:	61.7%
Number of rural applications selected for funding:	15
Number of charging ports funded in rural counties:	19
Total amount of awarded funds for selected rural projects:	\$1,309,645
Percent rural funding:	38.3%

Method used to select applications:

There were 52 eligible projects submitted for consideration for funding to install DC Fast Charging Infrastructure along identified priority corridors across the state as outlined under the 2019 “North Carolina Volkswagen Settlement Program Phase 1 Zero Emission Vehicle Infrastructure Program” RFP. All eligible applications totaled 75 DC Fast Charging ports.

All accepted eligible zero emission vehicle infrastructure program DC Fast applications were scored per the RFP project scoring criteria's six categories and a possible bonus including the following; Cost Effectiveness (VW\$/NOx Reduction), Distance from the Priority Corridor, Environmental Justice Score, Traffic Density, Accessibility and bonus points based on Renewable Energy Credits usage. The selection committee chose to fully fund the top scoring projects in urban/suburban and rural counties and used the Phase 1 goal to install DC Fast charging sites in approximate 50-mile increments.

In counties where multiple applications were received, an additional high scoring project was selected. This decision to fund a second project in these counties was based on the annual average daily traffic data and the higher probable site usage.

After all projects were selected for funding the program had \$16,737.61 remaining. These funds were applied to the On-road program to fund additional projects.

Types of EV Charging Infrastructure:

The charging kilowatt (kW) capacity of the selected projects range from a low of 50kW to a high of 200kW, most of the projects selected are of 62kW capacity. A total of 33 DC Fast Charging sites were selected for funding with a total of 50 charging ports that will be added to the state EV charging network. The selection committee also recommended to partially fund two ports instead of the proposed four ports of one project due to the cost of the application. Another unique project with a lower charging capacity will use a DC Fast charger with a solar canopy. The sustainable merit of this project and the ability to review power consumption and energy generation will provide useful data for evaluation and feasibility of funding solar powered DC Fast chargers in future phases.

Additional Funding:

The State Energy Office plans to fund three rural county projects (with an option to fund a fourth rural county project later) using their funds, totaling \$194,445,78 in requested funds from the applicants. This will add four additional DC Fast Charging ports for a total of 54 DC Fast Charging ports added to the state EV charging network funded by both programs.

Final Note:

One awardee notified the program manager that they purchased their charging equipment prior to a contract being fully executed. The cost of the charging equipment was added to the applicant cost share and the awarded amount was reduced. This change reduced the total awarded amount for the DC Fast program to \$3,415,748.
