Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Susan Chiurco

Dear Joelle Burleson,

I believe the current effort to "fight" the implementation of the Clean Power Plan is both poorly advised and not beneficial to the citizens of NC. Limits on carbon pollution to 30% less than 2005 levels will both improve air quality and health and it will also lead to additional jobs in other energy sectors that could promote the NC economy. My argument doesn't even need to address the likely valuable impact of the plan in reducing greenhouse gas emissions, which may contribute to increased global temperatures, as the plan stands on its own for the other reasons.

I believe the cost-benefit analyses of this plan means favoring its implementation and I urge you to take the long view of the benefits of this plan and that you should drop any lawsuit against the EPA to block these rules. And in fact you should whole-heartedly support the plan.

Thank you.

Sincerely,

Roger Shew

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Sarah Charles

Subject: Re: 111(d) Draft Rule
Date: Thursday, December 03, 2015 8:17:38 AM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.

- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.

- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air. This has been studied and studied. Scientists agree. We have to clean up our air and water. You are a good thinker and surely should see this. You need to act to protect where we live, our state and our planet.

Thank you.

Sincerely,

Larry Sauder

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Margaret Bollini

Subject: Re: 111(d) Draft Rule
Date: Thursday, December 03, 2015 1:10:02 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Stephanie Phillippi

Stop fouling us!

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

I await your reply.

Sincerely,

Lawrence Turk, RN

I support a clean, beautiful, healthy North Carolina for current and future generations. That requires a reasonable common sense approach that includes a strong state Clean Power Plan. The N.C. Department of Environmental Quality's current proposed rules do not even come close. Please accept the following comments on the draft:

- Draft a decent plan and not a legalistic dodge. That way NC businesses and communities will have the opportunity to have input in a more reasonable federal plan that can be implemented in the best interest of all our state's citizens.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. As a resident of an economically deprived rural community I think North Carolina should seriously consider participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for rural populations, geographically isolated populations, historically marginalized and ignored populations of all kinds including minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Subject: Re: 111(d) Draft Rule Comments
Date: Thursday, December 03, 2015 6:40:04 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

MARTIN HAZELTINE

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Rebecca Brady

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Martha Spencer

Subject: Re: 111(d) Draft Rule
Date: Friday, December 04, 2015 6:25:10 AM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Subject: Re: 111(d) Draft Rule Comments
Date: Friday, December 04, 2015 3:21:11 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Susan Treadway

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Gary Logan

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Rita Burns-Wooten

Subject: Re: 111(d) Draft Rule
Date: Saturday, December 05, 2015 3:11:01 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Carol-Anne Abbink

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. David Schmidt

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Cindy Brooks

Subject: Re: 111(d) Draft Rule Comments
Date: Sunday, December 06, 2015 6:43:45 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Joshua Lobe

Subject: Re: 111(d) Draft Rule
Date: Sunday, December 06, 2015 10:33:43 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Zac Tomchin

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Alexis Keyworth

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Kiyryn Harris

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Carol Smith

Subject: NC needs a strong set of rules to combat carbon emissions
Date: Monday, December 07, 2015 12:11:40 PM

Dear Ms. Burluson,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules fall well short of achieving the carbon pollution reductions required by EPA's new regulations. I respectfully submit these comments on the state's draft rules to comply with Section 111(d) of the Clean Air Act for your consideration.

The EPA Clean Energy Incentive Program offers state incentives, such as double credits, to develop clean energy and energy efficiency projects for low-income communities. North Carolina should prioritize participation in this program, but the draft rules do not include the program. Please address this and include language supporting this program in your final rule.

Thank you.

North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our state's solid clean energy economy. At present the state's plan ignores our clean energy resources, but renewable energy and energy efficiency should be a core part of the state's Clean Power Plan.

Thank you.

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Robin Bateman

Subject: NC needs a strong set of rules to combat carbon emissions
Date: Monday, December 07, 2015 1:01:32 PM

Dear Ms. Burleson,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules fall well short of achieving the carbon pollution reductions required by EPA's new regulations. I respectfully submit these comments on the state's draft rules to comply with Section 111(d) of the Clean Air Act for your consideration.

The EPA Clean Energy Incentive Program offers state incentives, such as double credits, to develop clean energy and energy efficiency projects for low-income communities. North Carolina should prioritize participation in this program, but the draft rules do not include the program. Please address this and include language supporting this program in your final rule.

Thank you.

Subject: Re: 111(d) draft rules upcoming public hearings - speaker sign up question?
Date: Monday, December 07, 2015 1:05:28 PM

Thank you for this information Joelle; that is helpful. I'd guess for the Charlotte hearing a safe bet is that at least 100 attendees will be there - and some portion will wish to speak. I'm less sure about numbers for Raleigh and Wilmington.

Thanks again, Cassie

On Mon, Dec 7, 2015 at 12:45 PM, Burluson, Joelle <joelle.burluson@ncdenr.gov> wrote:

Hi Ms. Gavin:

We will have attendees sign in (name, whom they represent, and whether they wish to speak) as they come in to the hearing and indicate if they would like to speak at the hearing. Speakers present in the order that they sign up. It would be helpful if speakers can arrive a bit early given that there is the potential for there to be a greater number of speakers on this topic than we typically have at hearings. There is not a predetermined number limit on speakers and the hearing officer will determine the amount of time allowed per speaker at the hearing depending on how many people there are that sign up to speak. In the past for large hearings I have seen about 3 minutes per speaker.

I hope this is helpful. How many speakers are you expecting from your organization at the three hearings?

Have a nice day.

Subject: 111(d) draft rules upcoming public hearings - speaker sign up question?

Good afternoon Joelle,

I'm reaching out to see if you might have any info on plans for the process of speaker sign ups at upcoming public hearings on the draft state rules to comply with 111(d) (Standards of Performance for Carbon Dioxide (CO₂) Emissions for Existing Electric Utility Generating Units (EGUs) Under Clean Air Act Section)?

Will members of the public who wish to speak need to arrive early to sign up? How much time will speakers be allowed? And will the number of speakers be limited to a predetermined number?

Thanks for anything you can share; I realize that the EMC may still be working these details out.

Thanks!

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. rhianna collins

Subject: I support a strong proposal to meet the Clean Power Plan rules
Date: Monday, December 07, 2015 5:36:39 PM

Dear Ms Burluson,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules fall well short of achieving the carbon pollution reductions required by EPA's new regulations. I respectfully submit these comments on the state's draft rules to comply with Section 111(d) of the Clean Air Act for your consideration.

North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our state's solid clean energy economy. At present the state's plan ignores our clean energy resources, but renewable energy and energy efficiency should be a core part of the state's Clean Power Plan.

Thank you.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Subject: Re: 111(d) Draft Rule Comments
Date: Monday, December 07, 2015 10:33:19 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Rosemarie Sawdon

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Subject: I support a strong proposal to meet the Clean Power Plan rules
Date: Tuesday, December 08, 2015 2:45:07 PM

Dear Ms Burleson,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules fall well short of achieving the carbon pollution reductions required by EPA's new regulations. I respectfully submit these comments on the state's draft rules to comply with Section 111(d) of the Clean Air Act for your consideration.

North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our state's solid clean energy economy. At present the state's plan ignores our clean energy resources, but renewable energy and energy efficiency should be a core part of the state's Clean Power Plan.

Thank you.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Terry Pope

Subject: I support a strong proposal to meet the Clean Power Plan rules
Date: Tuesday, December 08, 2015 10:05:22 PM

Dear Ms Burlison,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules fall well short of achieving the carbon pollution reductions required by EPA's new regulations. I respectfully submit these comments on the state's draft rules to comply with Section 111(d) of the Clean Air Act for your consideration.

North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our state's solid clean energy economy. At present the state's plan ignores our clean energy resources, but renewable energy and energy efficiency should be a core part of the state's Clean Power Plan.

Thank you.

Subject: Section 111(d) of the Clean Air Act (Clean Power Plan)
Date: Tuesday, December 08, 2015 10:47:36 PM

Dear NC Division of Air Quality,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111(d) of the Clean Air Act (Clean Power Plan):

North Carolina should build upon our state's booming clean energy sector to generate clean, renewable energy that will create jobs and investment in our communities. Unfortunately, the plan put forth by the Department of Environmental Quality does not contain any new clean energy requirements.

Further, our state should take advantage of energy efficiency as the least cost compliance option for reducing carbon pollution and, at the same time, help consumers reduce their energy consumption and power bills. I highly encourage DEQ to revise the proposed Clean Power Plan to include clean energy, like solar and wind, as well as energy efficiency.

I urge you to take a close look at what has happened in California. With an economy growing 50% faster than the national average, California shows it is possible to increase jobs AND cut harmful emissions-reducing per capita energy use and saving citizens money through energy efficiency and cleaner cars.

Thank you and I hope the McCrory administration revises its plan to better protect our communities and make significant carbon dioxide reductions.

Sincerely,

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Sherwin Ting

Subject: Re: 111(d) Draft Rule Comments
Date: Wednesday, December 09, 2015 10:10:23 AM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Hal Trufan

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Tammy Dudley

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

At this point, given the environmental lack of stewardship in NC and poor air quality and heavily-polluting, gridlocked "infrastructure" in Charlotte area, I would not want my grandchildren to leave the more environmentally healthy State they now live in.

It is a shame because we had hoped that our daughter and her husband would consider re-locating to Charlotte area..but with asthma in the family and award-winning public education, and cleaner water and air where they live; we in NC can't compete at this time.

Please at least raise our environmental standards of behavior for now. Perhaps in a few years, given stewardship, our schools here can compete as well!! For now, NC won't be getting an engineer who makes state of the art medical equipment or an award-winning tech savvy optimization and marketing specialist. :(How many more educated, productive transplants will NC continue to miss out on? Please raise our standards of expected environmental stewardship.

Thank you.

Sincerely,

Katherine Crothers

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Joe Horn

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Leon Penny

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Susan Wade

NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Tracy Mallon

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Jamie Gaudette

Subject: Re: 111(d) Draft Rule
Date: Thursday, December 10, 2015 7:05:16 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Gina Nash

Subject: I support a strong proposal to meet the Clean Power Plan rules
Date: Thursday, December 10, 2015 11:50:21 PM

Dear Ms Burleson,

I support a strong and just state Clean Power Plan. Unfortunately, DEQ's proposed rules fall well short of achieving the carbon pollution reductions required by EPA's new regulations. I respectfully submit these comments on the state's draft rules to comply with Section 111(d) of the Clean Air Act for your consideration.

North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our state's solid clean energy economy. At present the state's plan ignores our clean energy resources, but renewable energy and energy efficiency should be a core part of the state's Clean Power Plan.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Subject: Re: 111(d) Draft Rule Comments
Date: Friday, December 11, 2015 1:50:17 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Amy Adams

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. chrs bennett

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Stormy Beveridge

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Raymond Purton

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Cari Mustard

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Katie Grice

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Pokyes Kromtit

NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Williema Harris

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Janice Palmer

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Mariah Huffman

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

From the coast to the mountains, North Carolina is a jewel of the east. Every time we fail to protect our environmental treasure we chip away at the facets on our jewel. Please stop devaluing what we have!

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Bernice Peltier

Dear Joelle Burleson,

I support the EPA's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). Virtually all climate scientists agree that the effects and threat of climate change continue to increase, and we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,
Lauren Essick

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

Subject: Meet or exceed EPA target
Date: Tuesday, December 15, 2015 3:03:17 PM

Dear Ms. Burlleson:

2015 is on track to be the hottest year on record. Our planet and our very survival as a species are at risk. It's time and past time to get serious about cutting emissions and minimizing further warming. I was dismayed to hear of Gov. McCrory's suit against the EPA, whose target is very reasonable, and less than many other states plan to do. What can the Governor be thinking? Doesn't he have children, and perhaps grandchildren? He and I will be gone before the worst consequences arrive, but our descendants will be suffering horribly if more is not done now.

Please tell him his constituents don't want more illness, more sea level rise, more wars, famines, and "natural" disasters. We can avert at least some of these consequences of climate change by making genuine, serious efforts to reduce emissions. NC needs to do our part.

Thank you.

Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Josh Gambrel

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Roderic Mullen

Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Lenore Madeleine

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. essence whitesides

Subject: Re: 111(d) Draft Rule Comments
Date: Wednesday, December 16, 2015 4:43:35 AM

I support a strong state Clean Power Plan.

Accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Subject: Re: 111(d) Draft Rule Comments
Date: Wednesday, December 16, 2015 9:16:27 AM

ENOUGH IS ENOUGH!! I am tired of having to explain to my children and my students why our Governor refuses to improve the state of our environment and our future. It is abhorrent that you will put your own interests above those of others. Just who, exactly, are you listening to anyway? I have never been so happy to know there is an election next year. This is truly sickening the way you have chosen to abandon our rights to clean water and air.

Dr. Valerie Reynolds
UNC Charlotte Geology Lecturer

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Valerie Reynolds

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Patrice Stevenson

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Tracey Wasson

Date: Wednesday, December 16, 2015 7:36:26 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Please clean up your environmental policy & finally do something we North Carolinians can be proud of instead of staying your dangerous & backwards & Nationally embarrassing course of protecting & promoting polluters.

We need you to do your job to PROTECT OUR PRECIOUS ENVIRONMENT.

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

HK GUNN

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

Subject: I support a strong proposal to meet the Clean Power Plan rules
Date: Thursday, December 17, 2015 12:10:45 AM

Dear Ms Burluson,

I support a strong and effective state Clean Power Plan. We can meet all of the carbon pollution reductions required by EPA's new regulations with good leadership. I am told that DEQ's proposed rules for complying with Section 111(d) of the Clean Air Act fall well short of achieving the level of leadership required to meet the carbon reduction goals. That would be unfortunate, and I respectfully ask that the state's draft rules be changed to comply with the Clean Air Act.

We support a full conversion of our energy economy to Renewable Energy in North Carolina. We are already doing this in our Renewable Energy companies every day, and completely affordable Green Bond financing is readily available to fully convert our buildings to Geothermal Heating and Cooling and PV power. We can do this now and we should start now. And, if we start now, we can completely succeed.

We invite the NC DEQ to join with Net Zero Foundation (<http://netzerofoundation.org/>) and PACE-NC (<http://pace-nc.org/>) to make this change to Renewable Energy. We can definitely show DEQ how to meet the EPA's Clean Air Act -- the law of our land.

Renewable Energy and Energy Efficiency should be a core part of the state's Clean Power Plan!

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Daniel Overman

Subject: Re: 111(d) Draft Rule Comments
Date: Thursday, December 17, 2015 12:38:16 PM

I support a strong state Clean Power Plan. Unfortunately, the N.C. Department of Environmental Quality's current proposed rules do not come close to achieving the U.S. Environmental Protection Agency goals, have failed to engage stakeholders as required, and fail to include clean energy resources in the proposal. Please accept the following comments on the draft clean power plan:

- Drafting a weak plan that the EPA is certain to reject increases the likelihood that North Carolina will have a federal plan implemented. That takes away an opportunity for North Carolina businesses and communities to provide input.
- The Clean Power Plan is an opportunity for every state to chart its clean energy future and rapidly expand renewable energy generation. North Carolina's goal is to reduce carbon pollution by 12.5% (from 2012 levels) by 2030 and the state is well-positioned to meet this target with increases in energy efficiency and renewable energy.
- North Carolina is well-positioned to meet the goals set forth in the Clean Power Plan if we build upon our solar and energy efficiency successes. Currently, there is no clean energy in the proposal written by the DEQ. Renewable energy and energy efficiency should be a core part of developing the state's Clean Power Plan.
- The EPA offers a Clean Energy Incentive Program, which provides incentives to develop clean energy and energy efficient projects that benefit low income communities. North Carolina should prioritize participation in this EPA program, rather than ignoring it.
- DEQ should provide transparent and meaningful engagement for minority populations, low-income populations, tribes, and indigenous peoples during the drafting of the state's plan, as required by the EPA.

Sincerely,

Claudine Cremer

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Jennifer Gentle

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

jeremy kearney

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Diane Thornton

Dear Joelle Burleson,

As a scholar who has studied environmental ethics for over forty years, I know that our role vis a vis nature is one of stewardship rather than ownership. This is true in Jewish, Christian and Muslim traditions.

As an American I want to see our government and industry both to do what is needed to protect the quality of the soil, water, and air on which our lives depend.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). We should be working towards reducing our carbon emissions for a host of reasons, one being the effects on climate change.

I'm perplexed and disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. I would think you would want North Carolinian's to have greater control on this issue and it does seem ironic that you would seemingly 'throw the baby out with the bathwater' when it comes to this plan.

Clean air is needed for our families, our environment and for North Carolina's economy. Please do the right thing to protect our clean air.

Thank you.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Iliana Hidalgo

Dear Joelle Burleson,

I have a granddaughter who's been diagnosed with asthma, and I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Instead of leading the way toward a healthy environment, you've chosen to follow short-term interests--a disappointing and flawed strategy.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Joyce Loring

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Kate Bond

Dear Joelle Burleson,

You and your administration look like petulant children throwing a tantrum because things aren't going your way. Clean power is the future whether you like it or not, and standing in the way of that is bad for business, our health, and the environment (...not that you care about the latter two).

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Alexander Osborn

Dear Joelle Burlison,

My son is an Environmental Science major at UNC-CH and has shared so many of his findings through education about the importance of keeping North Carolina headed in the right direction environmentally. We had been on such a progressive track, please do not take us backwards! Our beautiful state deserves clean energy, not only for our own benefits and enjoyment, but for the continued economic need to attract others to our state for both tourism and new business.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Tom Warren

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Nothing about this makes sense.

The CPP for NC needs to reduce our reliance on costly, outdated, inefficient, dirty and toxic waste generating energy systems and spur smart local clean energy innovations. I drive an EV, own a HERS rated EE Home with solar panels and have reduced both our utility bills and CO2 emissions by 20% since 2003. I choose to work, shop and invest with companies that have a 100% RE and EE Strategies. Solar powered Electric buses, E-trains, E-homes, and E-vehicles and Smart Grids are technologies with unlimited potential to solve urban problems. The CPP for NC needs to focus on empowering communities, businesses and individuals to transition to a clean, renewable, energy efficient economy, creating local green jobs. NC should be a Climate Leader in quickly reducing GHG emissions while also cutting costs and risks for NC citizens and businesses. Rate-payers should not be absorbing the high costs and risks of new nuclear or behind the fence-line efficiency improvements.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Nothing about this makes sense.

May I suggest you do your research. I do this when I teach my classes. 95% of all scientist today state that climate change is happening. They also state that Carbon Dioxide from the burning of fossil fuels is the source of this increase. I find it incredible that you and others insist burying your head in the sand. Our Outer Banks is going to pay a heavy price. Our temperatures lately have been record breaking. We are experiencing climate change now. You Must Act!

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Robert Taylor

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

David Tate

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP).

As cheap oil and fossil fuels continue to glut the market, we do not need to expand offshore drilling in any way, shape or form. North Carolina's natural resources are far more important than developing relationships with the energy industry, even at the expense of fewer jobs.

I am very disappointed that the NC environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

susan hendrickson

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. lynnsey lanier

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Julia Holiman
