Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Kate Fulbright

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Katherine Goforth

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Judy Williams

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Geary Yelton

Dear Joelle Burleson,

As a person who has a Master's in Public Health with a focus in Pollution Prevention from UNC-Chapel Hill class of 95, I support NC have cleaner air. Including reducing our carbon emissions. I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). Please work with EPA, not fight them. We can do it and the costs are reasonable. Allow more natural gas, hydroelectric, and other forms of renewable including on land based wind-power. Even Nuclear is preferable to coal power plants. Anyway the coal come from out-of state.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Shelor Robin

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP).

I am very disappointed that you and your environmental agency. Appear to have a near complete lack of interest in protecting the environment by properly regulating fracking, allowing the alternate energy tax credits to lapse, and now not agreeing to meet the CO2 emission standards.

Climate change is real. Aggressive action is needed to prevent it from getting worse.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Pamela Johnston

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Helen Bell

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Edward Bujewski

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

Of course we all face many difficult problems in this time, which may seem to compete with one another for importance. However, nothing can take priority over clean air and clean water, on which all of our lives depend. Any responsible economic decision must be founded upon this obvious truth. Do not ignore it any longer!

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Karen Shapiro

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

D R Young

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Janet Link

Dear Joelle Burleson,

In the last few years Governor Pat McCrory you have signed the proclamation for the Native American Month in celebrating Aboriginal People. Yes you continue to seek avenues to to contaminate, destroy all that we believe in, the water of life, the soils we till, and the air that is breath! Why? As an Indigenous person living within homelands of NC stop the terrorist acts on the land.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Gillian Iery

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Sarah Jacobson

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Darlene Hamilton

Dear Joelle Burluson,

The 'greenhouse gas' effect of CO2 emissions from the burning of fossil fuels (especially coal) has been understood since the Industrial Revolution. The Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP) is a long overdue effort to reduce our carbon emissions and give polluters incentives to clean up their act.

The corrupt McCrory administration and the compromised Department of Environmental Quality is denying North Carolina the opportunity to create a plan that is effective because of the brazen collusion and corruption between the crony capitalist NC GOP and the chronic polluter/monopoly that is Duke Energy. Add to that a corrupted utilities commission and the Duke Energy monopoly is now granted a free pass to pollute at public expense while they block clean energy competitors. So much for a 'free market'.

The McCrory administration has set a new record for corruption, collusion, conflict of interest and crony capitalism that answers only to the elite corporate interests of monopolies and billionaires.

That is not democracy.

Sincerely,

Stephen Blake

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Clarissa Schaf

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Elizabeth Riddle

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burluson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

I don't wish your family to suffer asthma because of damage to our air, but you should be able to put yourself in others' shoes and realize how critical clean air is to OUR NORTH CAROLINIANS' HEALTH.
Thank you.

Sincerely,

Hazel Poolos

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Mimi Sexton

There needs to be more control, not less, and higher standards for all forms of energy production. Duke Energy is NOT helping clean up the mess it has made.

We must keep NC green and clean to attract not only young professionals with families, but also the retirees with higher levels of disposable income.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Lesley North

Dear Joelle Burleson,

The Environmental Protection Agency's recently proposed limits on carbon pollution would cut the childhood asthma rates that continue to rise in North Carolina. It also would address the projected threat of climate change.

It is beyond disappointing that you and your environmental agency are proposing a plan that is "designed to fail" the federal requirements under the Clean Power Plan. The Department of Environmental Quality thereby is denying North Carolina the opportunity to create a plan that actually serves the state and instead will allow bureaucrats in Washington to determine what is best for our state.

Clean air is not just an environmental issue; it is good for our families and for North Carolina's economy. Please make a responsible effort to address carbon pollution rather than play politics with our future. Thank you.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Thomas King

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

martha chambers

Mr. McRory.. I feel, actually KNOW you have backdoor allegiances with Duke Energy which is a conflict of interests. Duke should be MADE to clean up the mess at Salisbury plant and PAY for it without passing price to consumers and or giving politicians, particularly you sir, any kickbacks. I cannot wait for Mr Roy Cooper to take our state to a grander more powerful place that we were before you became governor and appeased and gave priority to the corrupt capitalists and your "good ol boys" GOP in our legislature.

Thank you.

Sincerely,

David Hutchins

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, our general air quality, and instead allows bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air by creating a plan set for success instead of knowingly setting up one for failure. If a student were to behave in this manner in school because they didn't approve of the format of the test, they would fail. What gives you the right to make that choice at a state level with no consequences? Make the responsible choice by conforming to better environmental standards.

Thank you.

Sincerely,

Sebastian George

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

S. Dee Ellis

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Corean Wagner

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Cliff Moone

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Not sure why you wouldn't want to keep our air clean, unless you like taking \$\$ from polluters in exchange for legislative favors? Oh yeah, you have already made it clear that you are just another purchased politician with no soul and no opinions of his own. Only decisions that make you money no matter how many lives are worsened by those decisions. You do know that many know this about you and won't say it to your face . . . even family and supposed friends.

Thank you.

Sincerely,

Bart Iannetta

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Mike Hamer

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Mike Ruck

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP).

I am very disappointed that you and Ms. Bureleson's DAQ agency are disavowing North Carolina options in response to the federal requirements under the CPP. Why promote the lazy choice of allowing bureaucrats in Washington to determine what is best for our state? It isn't as though we had nothing at stake on these issues! I resent this policy abandonment in favor of rule-making from afar.

Clean air is good for our families, our environment and for North Carolina's economy. Please reconsider: do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

kathleen magno

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

michael wallace

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

CHARLES & VIOLA ROBSON

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Kate Ladd

RE: EPA Region 4's 10/30 letter to Secretary van der Vaart.

Read between the lines. Your administration's total "fox in charge of the hen house" approach to "environmental quality" may lead to the federal government, with cause, removing NC's authority to administer the CAA and CWA. That would protect the environment, but it wouldn't do much for the GOP's electoral future in our state.

Thank you.

Sincerely,

Wilfred Robin

Dear Joelle Burluson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

We know McCrory is a puppet of Duke Energy, but maybe he'll get some sense and a conscience and realize the importance of ENVIRONMENT FIRST.

Thank you.

Sincerely,

Barbara Cerridwen

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air. Duke Power could CLOSE ALL its dirty coal plants instead of whining about what they can't do and deploy more solar and wind power generators quickly to fill the energy gap, instead of trying to kill solar across the state. You should plan for this and require Duke to do it. You could be a CLEAN ENERGY LEADER instead of a dragger of butt.

Thank you.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Don McKelvey

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Penny Beck

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Jerry Bolick

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Susan Yarnell

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Bruce & Carole Larivee

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Jennifer Vick

Nothing about this makes sense.

Most all of the republicans seem to think that addressing the issue of climate change will hurt the economy and the big money boys, yet they have done all they can to undermine the economy in hopes of making Obama look bad while handing out as much as they can in giveaways to their friends the rich corporations. I do not see how you can talk one way and act another--without looking foolish!

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Marissa Parker

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Angela Vieth

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Steven Tracy

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Tracy Feldman

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Chris Oakley

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Daniela Rossi

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

J.A. Dingman

Dear Joelle Burleson,

We need coal power in this country.

I don't know what CPP is but I've lost confidence in the feds so do what is right.

Thank you.

Sincerely,

Erik Blom

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Dallas Burkhardt

Dear Joelle Burleson,

No really. What is wrong with you guys running this state? Do you think there is a stone left unturned by this legislation and administration that could send us farther back into the stone ages of de-education, the destruction of the environment, and just plain out corruption and nepotism? I am coming to the conclusion that you have done a pretty thorough job in that regard.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

sherra franklin

Nothing about this makes sense.

I believe that state representatives are in positions of power to help North Carolina achieve success, well-being, health, and stability, not failure. Your job is not to bring positive movement to a standstill. Your job is not to be so stubborn as to accept failure over your own disappointed agenda. It is to represent the people and the land of North Carolina. Our clean air is undoubtedly a health concern for the people, and also a contributor to the beauty and integrity of North Carolina's landscape and environment.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Elizabeth Broyles

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Carolyn Jane Smyth

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Jan Phillips

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Patricia Belk

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

gerald pendleton

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Michael Savino
