I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

HK GUNN

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Anne Garvey

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

John and Phyllis Edwards

Dear Joelle Burleson,

I support the EPA's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As the effects of climate change continue to increase, we must act NOW to reduce our carbon emissions.

Why are you and your environmental agency purposefully setting North Carolina up to fail the federal requirements under the CPP? The 'Department of Environmental Quality' -- a misnomer if there ever was one -- is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, and our energy mix. Instead, the federal government will step in to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Caroline Martin`

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). There are hundreds of obvious signs, in public health, in environmental quality, in intelligent economics, that insist we should be working towards reducing our carbon emissions.

To be honest, I am not surprised at all that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. This, along with many of your other environmental policies, is a disgrace to the Old North State I know and love. Nothing about this "plan to fail" makes sense other than putting money into the hands of the few at the expense of millions of less fortunate and innocent North Carolinians and this place we call home.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Alan Spencer

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Tiffany Culler

Dear Joelle Burleson,

I am embarrassed as a North Carolinian to read the proposed plan that NC is submitting to meet the requirements of the federal Clean Power Plan. How can we only address coal and not the natural gas and renewable energy blocks required in the CPP? This strategy seems blatantly foolish to me, unless I assume that the Department of Air Quality is more concerned about business interests in NC than the health of its citizens and the sustainability of the natural resources in this state.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Shawn Cooper

Dear Joelle Burleson,

As a senior with COPD and asthma, I wholeheartedly support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP).

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we must work towards reducing our carbon emissions.

I am intensely disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is designed to fail, the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Lynn Barry

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Risa Wood

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Sandra Petteway

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Jeff Crenshaw

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Linnie Abernathy

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Jada Mayo

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Xaphan Jacobs

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. june johnson

NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Suzette Schrump

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Cynthia McGuire

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Robert Davis

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Judith Patrick

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Dolores Matarazzo

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Wanda Cox

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Henry Wall

Subject: Re: 111(d) Draft Rule
Date: Monday, November 30, 2015 11:55:21 AM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Judy Strickland

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Alisa Parker

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Subject: Re: 111(d) Draft Rule
Date: Tuesday, December 01, 2015 9:37:03 AM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Mason Atwater

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Martin Hazeltine

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Randolph Lawrence

In these times of high unemployment and rising prices, the last thing we need is an energy plan that will drastically affect costs on utility bills. to make our citizens pay while China, the MAJOR contributor to pollution, does nothing is a move in the wrong direction. Likewise, solar and wind generation are not the right way to go either as both are affected by weather and nightfall when there is no sunlight.

Therefore, I strongly urge you to do nothing that will have a negative impact on utility customers.

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Mary Endecott Green

Subject: Re: 111(d) Draft Rule
Date: Tuesday, December 01, 2015 2:26:27 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Kelly Sims

Date: Tuesday, December 01, 2015 7:35:04 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Joelle Burleson
NC

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Carson Butler

Subject: Re: 111(d) Draft Rule
Date: Tuesday, December 01, 2015 10:46:22 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. Sabrina Bahre

Dear Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Subject: Re: 111(d) Draft Rule
Date: Wednesday, December 02, 2015 12:49:17 PM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

josh carlough

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Adam Meyer

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions. I urge you to think of the young ones in your family, did you know that asthma is the #1 reason children miss school? I was born and raised in NC, and I want my state to strive to make every effort to keep NC clean, healthy and beautiful. I have experienced nothing but disappointment with Governor Pat McCrory and the DEQ.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Gracie Woody

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Garland Singletary

Dear Joelle Burleson,

Along with all Americans with a conscience and all those who believe in making the world safer and stronger for our children, I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma, autism, and Alzheimers rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am astonished that you, your government supporters and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is of paramount importance for our families, our environment, our country and for North Carolina's economy. Please gain more NC supporters by doing the morally right thing and protect our clean environment.

Thank you.

Sincerely,

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Jen Johnson

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution---the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, science clearly indicates that we should be working towards reducing our carbon emissions.

I am appalled that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for all North Carolina, its communities and our energy mix.

Clean air is good for our families, our environment and for North Carolina's economy. Do the right thing and protect our clean air.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Richard Strowd

Dear Joelle Burleson,

We MUST become less dependent on fossil fuels. We must therefore become more dependent on clean energy-- wind, sun, water. You need to move NC away from the old-style energy companies and move it to the companies suitable for the 21st, not the 19th century. As childhood asthma goes up, the state suffers from evermore abrupt weather changes, and the temperatures in the area soar above what is normal, you should realize that climate change is here NOW. It's not something that we'll see in a century or so. You need to help the state by encouraging stronger environmental regulations leading to better air and water quality.

Sincerely,

Patti Gillespie

Dear Joelle Burleson,

McCrory - seriously - FUCK YOU!

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Joseph Nolan

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

I'm a native born NCarolinian. I support the EPA's proposed Clean Power Plan (CPP). We should be working towards reducing our carbon emissions

.What about this do you not understand?

I know- it's all about " business"/ development , money. But you cannot sacrifice our air and water for the sake of business.

I'm a voter. NC's Dept of Env. Is a disgrace to NC and to the nation.

We should be LEADING on this by recognizing SCIENCE!!!

How on earth can you hope to advance science and technology in our state with policies that attempt to completely dismiss the very science and technology you purport to support?

Nothing about this makes any sense.

Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Dear Joelle Burleson,

Climate Change creates the greatest economic opportunity in our lifetimes. We need to redesign everything - those states that take the time to understand the potential for economic gain will flourish - those who fearfully cling to the past will languish. With the advent of computers, innovations are growing exponentially in number and impact. We need visionary leaders who are capable and interested in embracing these new technologies and leveraging them to both strengthen their state's economies and improve quality of life for their constituents. I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

David R Pruette

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

North Carolina has the opportunity to prepare for the future by aggressively moving towards clean energy and reduce emissions. Already, our coasts are experiencing increased flooding due to global warming. By making these changes now, we avoid far more costly problems in the future, while also protecting our environment and the tourism that depends on it. Cutting carbon pollution also will decrease many other air pollutants, such as the mercury from coal burning that makes fish statewide unsafe to consume.

Thank you.

Sincerely,

David Campbell

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Patti Dmuchowski

Dear Joelle Burleson,

Everyone seems to know that action needs to be taken with respect to global warming and weaning us off coal but a portion of the Republican party. Exxon knows, Shell knows, the US Military knows, 200 countries around the world know. So it is not OK to just thwart efforts to act in order to play to a misguided base.

Boilerplate letter to follow.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Subject: Re: 111(d) Draft Rule
Date: Wednesday, December 02, 2015 1:45:05 PM

DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants.

The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for Our state, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Margaret Clemen

Dear Joelle Burleson,

As a NC citizen who suffers from a chronic lung ailment, I write to say I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions and not continuing to play politics with our citizens' health.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our communities, and our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Donald Saunders

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Tom Mathern

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Tia Douglass

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Terry LaBombard

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Walter Davis

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

christine Massey

Dear Joelle Burleson,

I support the Environmental Protection Agency's proposed limits on carbon pollution, known as the Clean Power Plan (CPP). We must work towards carbon emission reduction for the benefit of public and environmental health.

I have concern about actions taken by North Carolina government representatives, including Governor McCrory, that block efforts to comply with the CPP. I have concern that these actions have been unjustly influenced by the political pressure of Duke Energy.

An elected official serves the people and renders decisions by and for the people. I ask you to honor your commitment to serve through enactment of policies that promote sustainable energy sources and diversified energy carriers.

We must work to protect the health and environment of North Carolina. I appreciate your critical appraisal of this message. Choose the bold path of noble action that places the needs of the people before the needs of corporations.

Sincerely,

Jennifer Baker

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Jacklene Spector

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is "designed to fail," the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Sincerely,

M. mari elvi

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Ann Floyd

Dear Joelle Burluson,

Please support the Clean Power Plan.

Childhood asthma rates continue to rise in North Carolina.

The effects and threat of climate change continue to increase.

These statistics require a reduction in carbon emissions.

You and your environmental agency want North Carolina fail by denying it the opportunity to plan for the state, its community, and the energy mix.

You have allowed far-away bureaucrats in Washington to determine what is best for the state. .

Clean air is essential for families, the environment and for North Carolina's economy.

Please protect North Carolina's clean air.

Thank you.

Sincerely,

Jane Beattie

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

constance mitchell

Dear Joelle Burleson,

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Kelley Wallace

Dear Joelle Burleson,

Our children and grandchildren deserve that you work hard to support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP).

I support them for the sake of the health of our children and for all of us. As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

And surely ethical people would not try to cheat and lie on what you propose to do to follow the Federal requirements.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Dear Joelle Burleson,

Our political party will not matter when the weather gets warmer or more strange than it currently is. Daffodils in my yard are 4-5 inches high? Why? It is warm and wet. We need to work to limit the amount of carbon we put into the air.

I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.

I am very disappointed that you and your environmental agency are purposefully setting North Carolina up to fail with the federal requirements under the CPP. By championing a plan that is 'designed to fail,' the Department of Environmental Quality is denying North Carolina the opportunity to create a plan that works best for North Carolina, our community, our energy mix, and instead allowing bureaucrats in Washington to determine what is best for our state. Nothing about this makes sense.

Clean air is good for our families, our environment and for North Carolina's economy no matter what political party we belong to.. Please do the right thing and protect our clean air.

Thank you.

Sincerely,

Marlene Pratto

Subject: Urging the DEQ to take the CPP seriously!
Date: Thursday, December 03, 2015 12:40:28 AM

I am writing because DEQ must do more to meet the goals set forth in the Clean Power Plan by including clean zero-emission energy, energy-efficiency, and input from low-income communities in NC's state implementation plan. Thank you for the opportunity to comment on North Carolina's state plan to reduce carbon pollution from power plants. The federal Clean Power Plan is a tremendous opportunity for the State to not only reduce carbon pollution that contributes to climate change but to also improve public health, generate new clean energy jobs, and reduce consumers' electricity bills.

I support a strong and just state Clean Power Plan. Unfortunately DEQ's proposed rules do not come close to achieving the carbon dioxide reductions required by the EPA. I respectfully request that the Division of Air Quality consider my comments on the draft rules to comply with Section 111 (d) of the Clean Air Act (Clean Power Plan):

- Renewable energy and energy efficiency should be a core part of the state's Clean Power Plan. North Carolina is well positioned to meet the goals set forth in the Clean Power Plan if we build upon our zero-emission renewable energy successes (i.e. wind, solar). Currently, there is no clean energy in DEQ's proposal. Renewable energy must be zero-emission. This means no woody biomass as studies have proven biomass is worse for our climate than coal.
- The state plan must include documentation that the agency has conducted community outreach and community involvement, including engagement with vulnerable communities. The Department of Environmental Quality has failed to engage stakeholders as required by the Clean Power Plan. The draft rules do not include this documentation.
- The EPA Clean Energy Incentive Program offers states incentives, such as double credits, to develop clean energy and energy efficiency projects for low income communities. North Carolina should prioritize participation in the EPA Program, and should include the voices of NC communities impacted by dangerous pollution caused by woody biomass facilities.. The draft rules do not take advantage of this program.

Again, thank you for the opportunity to comment as North Carolina develops its state Clean Power Plan.

Dear Joelle Burleson,

You don't need to look too hard to realize that the hotter our air temperatures become, the more difficult and expensive it becomes to maintain quality land for agriculture/livestock production. As well as keeping land suitable for housing and businesses. Every year, more and more families and firefighters pay as record forest fires burn; taking property and sometimes lives with them. I support the Environmental Protection Agency's recently proposed limits on carbon pollution, known as the Clean Power Plan (CPP). As childhood asthma rates continue to rise in North Carolina and the effects and threat of climate change continue to increase, we should be working towards reducing our carbon emissions.
