1. The first step in the process of the investigation is to determine the scope of the problem. This involves identifying the specific area of concern and the objectives of the study.

2. The second step is to gather information. This can be done through a variety of methods, including interviews, surveys, and the review of existing literature.

3. The third step is to analyze the data. This involves identifying patterns and trends in the data and drawing conclusions based on the findings.

4. The fourth step is to report the results. This involves preparing a written report that summarizes the findings of the study and provides recommendations for further action.

5. The fifth step is to evaluate the results. This involves assessing the effectiveness of the investigation and identifying areas for improvement.

6. The sixth step is to disseminate the results. This involves sharing the findings of the study with the relevant stakeholders and the wider community.

7. The seventh step is to monitor the results. This involves tracking the progress of the implementation of the recommendations and assessing the impact of the investigation.

8. The eighth step is to review the results. This involves evaluating the overall effectiveness of the investigation and identifying areas for improvement.

9. The ninth step is to conclude the investigation. This involves summarizing the findings of the study and providing recommendations for further action.

10. The tenth step is to disseminate the results. This involves sharing the findings of the study with the relevant stakeholders and the wider community.

There are no pending judgments or tax liens existing.

3rd Testing

4/25/68

James C. Lane

1. The first step is to identify the problem. This involves understanding the current situation and the goals that need to be achieved.
