All –

This communication is being sent as a courtesy and for information.

At approximately 6:40 p.m. on Tuesday 9/18/18, a tanker truck was filled with rainwater from Hurricane Florence from on-site dikes using standard procedures and checklists. The tanker was weighed and left the Chemours site. Approximately four miles after leaving the site, the driver noticed one of the top domes was not properly sealed when he approached a stop sign. The tanker has three top domes, only one of which is used for filling purposes. The driver estimated a gallon or less of rainwater leaked onto the pavement and roadside. Tobermory Volunteer Fire Department responded to the incident after a citizen notified them, and the Fire Department determined that no action was necessary due to their normal procedures and the fact that the tanker truck held rainwater.

Operations had been safely shut down at the site by Thursday, 9/13/18, and the dikes were being emptied of rainwater in preparation for operations startup activities.

Thank you –
Christel
