Participants:
Upper Neuse River Basin Association (UNRBA); Center for Watershed Protection; Federal, State and Local Government Agencies; representatives of residential, commercial, and natural resource management interests in the local watershed.

Watershed Assessment Contractor:
Watershed Restoration Plan: UNRBA with funding from NC Division of Water Quality Section 319 Grant
Restoration Mapping and Implementation: Post, Buckley, Schuh, & Jernigan, Inc.

Project Overview
The Lick Creek Watershed Restoration Plan recommends comprehensive watershed management strategies for restoring the watershed’s water quality and aquatic habitat in the short-term and protecting them in the long-term. Lick Creek is on the NC Section 303(d) list of impaired water bodies, due primarily to the Creek’s poor aquatic life ratings. The Creek is also a tributary of Falls Lake, for which the State of NC has developed a nutrient management strategy.
LWP Project Activity
UNRBA initiated the Lick Creek Watershed Restoration Plan in 2006 and completed the plan in 2009 with US Environmental Protection Agency 319 funding. Other projects worked in tandem with the development of the local watershed plan. The Upper Neuse River Basin Association received a grant from the Home Depot foundation to implement volunteer riparian buffer plantings. This project resulted in the successful plantings of approximately 250 riparian trees and shrubs on four properties in the Lick Creek Watershed. Furthermore, the NC Division of Mitigation Services funded a large effort to identify and implement stream, wetland, and buffer restoration projects in the Lick Creek watershed as a way to reduce water pollution and improve water quality. The Project Atlas was completed in September 2009.
