## Preliminary Soil Remediation Goals (PSRG)

February 2018

(based on November 2017 USEPA Regional Screening Tables)

*These companion notes must be used with the PSRG Table*

### General Notes:

1. Use of the PSRG Table for remediation goals requires a complete site characterization including identifying the contaminants present and the range of their concentrations.
2. The health-based PSRGs (Residential and Industrial/Commercial) listed on the table represent the lower of:
  - a. the carcinogenic remediation goal at 1.0E-06 risk (C), or
  - b. the non-carcinogenic remediation goal at a hazard quotient of 0.2 (N).
3. The sum of chemical-specific hazard quotients for all contaminants detected may not exceed a value of 1. Therefore, if more than five contaminants with non-carcinogenic effects are detected, use the DEQ *Risk Calculator* or contact the appropriate remediation program within DEQ for additional guidance. Similarly, use of the calculator may allow higher remediation goals if less than five contaminants with non-carcinogenic effects are detected.
4. The protection of groundwater PSRGs are developed using a US EPA soil leaching model with conservative assumptions default values appropriate for North Carolina. As noted on the table, the protection of groundwater PSRGs are established based on one of the following:
  - a. **2L or IMAC** – the North Carolina 15A NCAC 02L Groundwater Quality Standards (2L) or the Interim Maximum Allowable Concentrations (IMAC), or
  - b. **Calculated** – For chemicals with no 2L or IMAC, a target groundwater concentration was calculated using the procedures and references in 15A NCAC 02L.0202. Check with the appropriate remedial program guidance to ensure applicability prior to use. *Use of these soil to groundwater values in no way exempts compliance from the 15A NCAC 02L Standards or IMACs (or risk-based alternate standards where approved by applicable remediation program) for groundwater, including the use of the Practical Quantitation Limit (PQL) where no numeric standard currently exists.*
5. A protection of groundwater PSRG may be calculated using the following formula if site-specific data for porosity ( $\theta_w$  and  $\theta_a$ ), bulk density ( $P_b$ ), and organic carbon content (Foc) are available.

$$C_{soil} = C_{gw} \left[ k_s + \frac{(\theta_w + \theta_a H')}{P_b} \right] df$$

	Parameters	Default Values	Units
C soil	Calculated Source Concentration for soil	not applicable	mg/kg - soil
C <sub>gw</sub>	Applicable Groundwater Target Concentration: 15A NCAC 02L Standard	<a href="#">02L standard or IMACs</a>	mg/L - water
df	Dilution factor	20 (0.5 acre source size) <sup>1</sup>	unitless
K <sub>s</sub>	Soil-water partition coefficient for organic constituents $k_s = k_{oc} \times f_{oc}$ for inorganic constituents $k_s = k_d$	Calculated from $k_{oc}$ and $f_{oc}$ , or $K_d$	L/kg
$k_{oc}$	Soil organic carbon-water partition coefficient	<a href="#">chemical-specific</a>	L/kg
$f_{oc}$	Fraction of organic carbon in subsurface vadose soils	0.002 (0.2%) <sup>2</sup>	kg/kg
$K_d$	Soil-water partition coefficient for inorganics	<a href="#">chemical-specific</a> (pH=5.5)	L/kg
$\theta_w$	Water-filled soil porosity-vadose soils	0.3 <sup>2</sup>	L <sub>water</sub> /L <sub>soil</sub>
$\theta_a$	Air-filled soil porosity-vadose soils	0.13 <sup>2</sup>	L <sub>air</sub> /L <sub>soil</sub>
P <sub>b</sub>	Dry bulk density	1.5 <sup>2</sup>	kg/L
H'	Henry's Law constant-dimensionless where: H' = Henry's Law constant (atm- m <sup>3</sup> /mole) x conversion factor of 41	<a href="#">chemical-specific</a>	unitless

1 - USEPA default value from US EPA 1996 Soil Screening Guidance

2 - DEQ default value appropriate for North Carolina

chemical-specific - use EPA data from: <https://semspub.epa.gov/work/HQ/197053.pdf>

6. Refer to the DEQ *Technical Guidance for Risk-Based Environmental Remediation of Sites* or contact the appropriate remediation program within DEQ for methods to develop site-specific health-based goals and protection of groundwater goals.

7. For contaminants not listed on the table or in Appendix A, contact the appropriate remediation program within DEQ.

#### Compound-Specific Notes:

8. **Cadmium:** Use the diet value as the PSRG.

9. **Cyanide:** Analyze for total cyanide. Compare the results to the lowest PSRG value for cyanide species on the table.

10. **Lead Compounds:** The PSRG for direct residential contact with lead in soil is 400 mg/kg in cases where it has been demonstrated that the lead exposure is from soil only. The PSRG is 250 mg/kg for a residential scenario if there are untested drinking water wells in use that are located in the area of lead contamination, or if the wells have been tested and the tapwater concentration contributed by non-background sources is greater than 5 ug/l. If the non-background tapwater concentrations are less than 5 ug/l, the PSRG is 400 mg/kg.

The PSRG is 800 mg/kg for an industrial/commercial scenario.

11. **Manganese:** Use the non-diet value as the PSRG, which accounts for the dietary contribution from the normal US diet.

12. **Mercury:** Use the elemental value for the PSRG.

13. **PCBs:** Screen the 12 dioxin-like PCBs vs their respective PSRGs. Total the remaining congener concentrations and compare to the high-risk number. Do not use the Aroclor values without first consulting with the appropriate remediation program within DEQ.

Preliminary Soil Remediation Goals (PSRG)

APPENDIX A

February 2018

(based on November 2017 USEPA Regional Screening Tables)

Appendix A lists chemicals with NC 02L Groundwater Standards or Interim Maximum Allowable Concentrations (IMACs) that are not listed on the EPA Regional Screening Level table.

CAS #	Chemical Name:	Csat mg/kg	Residential Health Based PSRG mg/kg	Industrial/ Commercial Health Based PSRG mg/kg	Protection of Groundwater PSRG mg/kg	NC Groundwater Protection Standard 2L <b>(IMAC)</b> ug/l	Federal Drinking Water Standard MCL ug/l
000086-74-8	Carbazole				0.74	<u>2</u>	
541-73-1	Dichlorobenzene, 1,3-(metadichlorobenzene)				3.8	200	
3648-20-2	Diundecyl phthalate				20,600	100	
1031-07-8	Endosulfan sulfate				16	<u>40</u>	
64-17-5	Ethanol (ethyl alcohol)				16	<u>4000</u>	
99-87-6	4-Isopropyl toluene (p-cymene)				1.24	<u>25</u>	
335-67-1	Perfluorooctanoic acid (PFOA; C8)				0.017	<u>2</u>	
208-96-8	Acenaphthylene				41	200	
191-24-2	Benzo(g,h,i)perylene				15,600	200	
85-01-8	Phenanthrene				134	200
