§ 143-215.94MM: Reserved for future codification purposes.

Part 2D. Training of Underground Storage Tank Operators.

§ 143-215.94NN. Applicability.

§ 143-215.94OO. Definitions.
Unless a different meaning is required by the context, the definitions in G.S. 143-212 and G.S. 143-215.94A apply in this Part.

(1) "Emergency response operator" means an on-site person whose responsibilities include addressing emergencies presented by a spill or release, or responding to alarms or releases from an underground storage tank system. For an unmanned facility, "emergency response operator" means the person responsible for responding to emergencies or alarms or releases at the facility.

(2) "Primary operator" means a person having primary responsibility for the daily on-site operation and maintenance of an underground storage tank system.

(3) "Underground storage tank" means: (i) any one or combination of tanks (including underground pipes connected thereto) that is used to contain an accumulation of regulated substances, and the volume of which (including the volume of the underground pipes connected thereto) is ten percent (10%) or more beneath the surface of the ground; and (ii) to which this Part applies pursuant to G.S. 143-215.94NN.

(4) "Underground storage tank system" or "tank system" means an underground storage tank, connected underground piping, underground ancillary equipment, dispenser, and containment system, if any. (2010-154, s. 2.)

§ 143-215.94PP. Designation of operators to be trained.
(a) The owner of an underground storage tank system shall designate the primary operator of the underground storage tank system. The person designated shall be the underground storage tank operator, as defined in 40 Code of Federal Regulations Part 280 (July 1, 2009 Edition), or an employee or agent of the underground storage tank operator. There shall be a designated primary operator of the underground storage tank system at all times, until the underground storage tank system has been permanently closed. If the owner fails to designate a primary operator, the owner shall be deemed to be the primary operator of the underground storage tank system for purposes of this Part.

(b) The primary operator shall designate one or more emergency response operators who are employees or agents of the primary operator and shall be on call to respond to emergencies or alarms at the facility. If an emergency response operator is not present at the facility at all times during which a regulated substance is being withdrawn from, or is capable of being withdrawn from, the underground storage tank system, the facility shall have an automated notification system in place that will alert the emergency response operator of an emergency or activated alarm at the facility. If the primary operator fails to designate one or more emergency response operators, the primary operator shall be deemed to be the emergency response operator of the underground storage tank system.
(c) A person may act as both the primary operator and the emergency response operator of the underground storage tank system. (2010-154, s. 2.)

§ 143-215.94QQ. Training requirements for primary operators.

(a) The Department shall develop and implement a training program for primary operators. The training program shall provide instruction on the proper operation and maintenance of the underground storage tank system at the facility, principles of construction and safety, and all regulatory requirements associated with the underground storage tank system. The training may consist of a combination of on-site instruction and on-site testing, as well as online instruction and online testing. In order to satisfactorily complete the training, a primary operator shall, at a minimum, demonstrate all of the following:

(1) Knowledge of the requirements for spill prevention, overfill prevention, release detection, corrosion protection, emergency response, and product compatibility.

(2) Site-specific knowledge of the equipment used at the facility and the components of the underground storage tank system, and the methods of release detection and release prevention associated with the underground storage tank components.

(3) Knowledge of the requirements for demonstrating financial responsibility.

(4) Understanding of notification requirements associated with the underground storage tank system, including requirements for reporting releases and suspected releases.

(5) Understanding of the requirements for the temporary and permanent closure of underground storage tank systems.

(6) Knowledge of the emergency response operator training requirements, and the actions to be taken in response to emergencies and alarms.

(b) A primary operator shall be retrained if an inspection at the facility reveals that the underground storage tank system is not in substantial compliance with the requirements for: release detection, release prevention, financial responsibility, emergency response, suspected release reporting and investigation, the proximity of the underground storage tank system to water supply wells and surface water, and permitting. A primary operator who is required to be retrained shall complete the retraining within a reasonable time as determined by the Department. The retraining shall include training in the areas for which the underground storage tank system was not in compliance. The retraining may consist of a combination of on-site instruction and on-site testing, as well as in-class instruction and in-class testing, and, if available, the Department shall offer online instruction and online testing in lieu of in-class instruction and in-class testing. In-class instruction shall be provided by the Department at least once each quarter in each one of the regional offices of the Department. An operator required to be retrained pursuant to this subsection shall only be required to attend in-class instruction and in-class testing at the regional office closest to the facility for which the operator is designated.

(c) The primary operator shall maintain documentation to show that the operator has satisfactorily completed all training required by this section. (2010-154, s. 2.)

§ 143-215.94RR. Training requirements for emergency response operators.

(a) The Department shall develop a training program for emergency response operators. In order to satisfactorily complete the training, an emergency response operator shall, at a minimum, demonstrate all of the following:

(1) General understanding of the underground storage tank system at the facility, and knowledge of the location and proper operation of the safety and emergency response equipment.
(2) Understanding of the actions to be taken in response to an emergency, including situations posing an immediate danger or threat to the public or to the environment and requiring immediate action.

(3) Understanding of leak detection alarms and preparations needed to respond to alarms before a release has occurred.

(4) Recognition of unusual operating conditions, equipment failures, or environmental conditions that may indicate a release, and knowledge of the steps to take in response to a suspected release.

(5) Knowledge of immediate steps to take in response to a confirmed release to stop further release and to contain spills before they reach the environment.

(b) The primary operator is responsible for implementing the training program developed by the Department for emergency response operators. The primary operator shall train each emergency response operator of the underground storage tank system at the facility. Prior to training an emergency response operator, the primary operator shall have satisfactorily completed all training required by this section. The primary operator shall maintain documentation of training provided to emergency response operators. (2010-154, s. 2.)

§ 143-215.94SS. Tank systems for emergency power generators.
This section applies only to a facility that utilizes an underground storage tank system to store fuel solely for use by emergency power generators. A primary operator that has satisfactorily completed the training required by G.S. 143-215.94QQ at a facility shall be deemed trained as the primary operator at another facility that has identical spill prevention, overfill prevention, release detection, corrosion protection, emergency response, and product compatibility requirements as the facility for which the primary operator has satisfactorily completed training. (2010-154, s. 2.)

§ 143-215.94TT. Enforcement.
This Part may be enforced as provided in G.S. 143-215.94W, 143-215.94X, and 143-215.94Y. (2010-154, s. 2.)

§ 143-215.94UU. Effect on other laws.
The requirements of this Part are in addition to, and not in lieu of, any other requirements applicable to underground storage tank owners or operators, as defined in 40 Code of Federal Regulations Part 280 (July 1, 2009 Edition), under law. (2010-154, s. 2.)

§§ 143-215.94VV through 143-215.94ZZ: Reserved for future codification purposes.

Part 3. Oil Terminal Facilities.

§ 143-215.95. Duties of Secretary.
The Secretary shall administer the provisions for registration of oil terminal facilities contained in this Part. In addition, he shall engage in such study and research concerning oil terminal facilities and their regulation in this State and elsewhere as may be required to furnish the General Assembly with a thorough factual basis for his recommendations for further legislation pursuant to this Part. (1973, c. 534, s. 1; 1977, c. 771, s. 4; 1987, c. 827, s. 154(3).)

§ 143-215.96. Oil terminal facility registration.
(a) The owner or operator of every oil terminal facility in the State shall secure a registration certificate from the Secretary. The Secretary shall not issue a registration certificate until the owner or operator has furnished the following information:

(1) Complete name of the owner and operator of the oil terminal facility together with addresses and telephone numbers;
