15A NCAC 02C .0201 PURPOSE
The rules in this Section establish classes of injection wells and set forth requirements and procedures for permitting, constructing, operating, monitoring, reporting, and abandoning approved types of injection wells and abandoning, monitoring, and reporting non-permitted wells used for the injection of wastes or any substance of a composition and concentration such that, if it were discharged to the land or waters of the state, would adversely affect human health or would otherwise render those waters unsuitable for their best intended usage. Except as provided for in G.S. 143-215.1A, the discharge of any wastes to the subsurface by means of wells is prohibited by G.S. 143-214.2(b).

History Note: Authority G.S. 87-84; 87-87; 87-88; 87-94; 87-95; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c);
Eff. August 1, 1982;
Amended Eff. May 1, 2012; September 1, 1996.

15A NCAC 02C .0202 SCOPE
The rules in this Section apply to all construction, operation, use, modification, alteration, repair, and abandonment activities of all injection wells as defined herein. These Rules do not apply to subsurface distribution systems associated with sewage treatment and disposal permits issued in accordance with G.S. 130A.

History Note: Authority G.S. 87-86; 87-87; 143-211; 143-215.1A; 143-215.3(a)(1); 143-215.3(c);
Eff. August 1, 1982;
Amended Eff. May 1, 2012; September 1, 1996.

15A NCAC 02C .0203 CONFLICT WITH OTHER LAWS, RULES, AND REGULATIONS
The provisions of any federal, state, county, or municipal laws, rules, or regulations establishing injection well standards affording greater protection to the public welfare, safety, and health and to the groundwater resources shall prevail, within the jurisdiction of such agency or municipality, over standards established by the rules in this Section.

History Note: Authority G.S. 87-87; 87-96; 143-211; 143-215.1A; 143-215.3(a)(1); 143-215.3(c);
Eff. August 1, 1982;
Amended Eff. September 1, 1996.

15A NCAC 02C .0204 DEFINITIONS
In addition to the terms defined in Rule .0102 of this Subchapter the following terms and phrases apply unless the context requires otherwise:

(1) "Abandonment or Plugging Record" means a systematic listing of permanent or temporary abandonment of a well and may contain a well log or description of amounts and types of abandonment material used, the method employed for abandonment, a description of formation location, formation thickness, and location of abandonment structures.

(2) "Approved", "require", "necessary", "impose", and similar terms, or other forms of such terms, mean an action of the Director or Division based on the standards or requirements of the rules of this Section unless the context requires otherwise.

(3) "Area of Review" means the area around an injection well as specified in each applicable rule.

(4) "Best intended usage" is as defined in 15A NCAC 02L .0201 for each groundwater classification.

(5) "Catastrophic Collapse" means the failure of overlying strata caused by removal of underlying materials.

(6) "Closed-Loop Geothermal Well System" means a system of continuous piping, part of which is installed in the subsurface via vertical or angled borings, through which moves a fluid that does not exit the piping, but is used to transfer heat energy between the subsurface and the fluid in association with a heating and cooling system. A variation of this type of system consists of the continuous piping emplaced into a water supply well such that the standing column of groundwater serves as the heat transfer medium.

(7) "Closed-Loop Groundwater Remediation System" is as defined in G.S. 143-215.1A.

(8) "Cluster" means two or more geothermal injection wells connected to the same manifold or header of a geothermal heating and cooling system.

(9) "Confined or Enclosed Space" means any space, having a restricted means of entry and exit and is subject to the accumulation of toxic or flammable contaminants or has an oxygen deficient atmosphere.

(10) "Confining Zone" means a geological formation, group of formations, or part of a formation that is capable of limiting fluid movement.

(11) "Contaminant" is as defined in 15A NCAC 02L .0102.

(12) "Facility, Operation, or Activity" means any injection well or system.

(13) "Flow Rate" means the volume per unit time of a fluid moving past a fixed reference point.

(14) "Fluid" means a material or substance which is capable of flowing whether in a semisolid, liquid, sludge, gas, or other form or state.
"Formation Fluid" means fluid present in a formation under natural conditions. This does not include introduced fluids, such as drilling mud and grout, used to facilitate the construction or development of a well.

"Generator" means any person, by site location, whose act or process produces hazardous waste.

"Groundwaters" mean those waters occurring in the subsurface under saturated conditions.

"Hazardous Waste" means any solid, semisolid, liquid, or contained gaseous waste or combination thereof, which because of its quantity, concentration, or physical, chemical or infectious characteristic may:

(a) cause or contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness; or

(b) pose a present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

"Hazardous Waste Management Facility" means all contiguous land and structures and other appurtenances and improvements on the land used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (for example, one or more landfills, surface impoundments, or combination of them).

"Hose Bibb or Tap" means a fluid sampling port located on or appurtenant to a well.

"Hydraulic Conductivity" means the volume of water at the existing kinematic viscosity that will move in a porous medium in unit time under a unit hydraulic gradient through a unit area measured at right angles to the direction of flow.

"Hydraulic or Pneumatic Fracturing" means the intentional act of injecting potable water, ambient air, or other approved fluids, which may carry a proppant, for the purpose of forming new fractures or propagating existing fractures in a geologic formation or portion thereof with the intent of increasing the formation's permeability. Hydraulic fracturing shall be used only in association with groundwater remediation injection activities and shall not result in the fracturing of any confining units or otherwise cause or contribute to the migration of contamination into uncontaminated areas.

"Hydrostratigraphic" means a body of rock or unconsolidated sediment distinguished and characterized by observable hydraulic properties that relate to its ability to receive, store, transmit, and yield water.

"Injectant" means any solid or fluid that is emplaced in the subsurface by means of an injection well.

"Injection" means emplacement or discharge into the subsurface of a solid or fluid substance or material. This definition excludes drilling fluids, grout used in association with well construction or abandonment, and fluids used in connection with well development, rehabilitation or stimulation.

"Injection Well" means any well as defined in G.S. 87-13, whose depth is greater than its largest surface dimension and which is used, or intended to be used, for the injection of fluids or solids into the subsurface or groundwaters.

"Injection Zone" means a geological formation, group of formations, or part of a formation receiving solids or fluids through an injection well.

"Lithology" means the description of rocks or sediments on the basis of their physical and chemical characteristics.

"Lithostratigraphic" means a body of rock or unconsolidated sediment that is distinguished and characterized by observable lithologic features or its position relative to other bodies of rock or unconsolidated sediment.

"Mechanical Integrity" means:

(a) an absence of a leak in the casing, tubing, or packer of an injection well; and

(b) an absence of fluid movement through vertical channels adjacent to the injection well bore.

"Permit" means an authorization, license, or equivalent control document issued by the Director to implement the requirements of the rules of this Section.

"Permitted by Rule" means that the injection activity is authorized by the rules of this Section and does not require the issuance of an individual permit when injection wells are constructed and operated in accordance with the rules of this Section.

"Plug" means the act or process of stopping the flow of fluids into or out of a formation through a borehole or well penetrating that formation.

"Potable Water" means those waters of the State which are suitable for drinking, culinary, or food processing purposes.

"Pressure" means the total load or force per unit area acting on a surface.

"Proppant" means a granular substance such as quartz sand or other approved material that is used to hold open cracks formed in the subsurface as a result of hydraulic or pneumatic fracturing.

"Receptor" means any human, plant, animal, or structure which is, or has the potential to be, affected by the release or migration of contaminants. Any well constructed for the purpose of monitoring groundwater and contaminant concentrations shall not be considered a receptor.

"Subsidence" means the lowering of the natural land surface in response to: earth movements; reduction of formation fluid pressure; removal of underlying supporting material by mining or solution of solids, either artificially or from natural causes; compaction due to wetting (hydrocompaction); oxidation of organic matter in soils; or added load on the land surface.

"Subsurface Distribution System" means an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids or solids below the surface of the ground.
"Transmissivity" means the rate at which water of the prevailing kinematic viscosity is transmitted through a unit width of an aquifer under a unit hydraulic gradient. It equals the hydraulic conductivity multiplied by the aquifer thickness.

"Underground Sources of Drinking Water" means all underground waters of the State classified as existing or potential water supplies in Subchapter 02L.

"Waste" is as defined in G.S. 143-213(18).

"Waters" or "Waters of the State" is as defined in G.S. 143-212.

History Note: Authority G.S. 87-85; 87-87; 143-213; 143-215.1A;
Eff. August 1, 1982;
Amended Eff. May 1, 2012; September 1, 1996; July 1, 1988; March 1, 1984.

15A NCAC 02C .0205 AREA OF REVIEW (REPEALED)

History Note: Authority G.S. 87-87; 143-211; 143-215.1A; 143-215.3(a)(1); 143-215.3(c);
Eff. August 1, 1982;
Amended Eff. September 1, 1996;

15A NCAC 02C .0206 CORRECTIVE ACTION

(a) Injection wells not constructed in compliance with the criteria and standards specified in these Rules shall be brought into compliance with the rules in this Section or abandoned by the person(s) responsible for the construction of the well(s) within 30 calendar days of becoming aware of any instance of noncompliance.

(b) Where operation of any injection facility is not in compliance with the requirements of the rules in this Section, or where continued operation of the injection facility threatens any water quality standard or classification established under the authority of G.S. 143-214.1, the owner of the injection facility shall perform the following:

1. stop all injection activities immediately;
2. notify the Division orally by the close of the next business day and in writing within five calendar days of becoming aware of any instance of noncompliance;
3. perform a site assessment and submit the site assessment to the Division within 30 calendar days of notifying the Division. The Director may approve an alternate time period based on the severity and extent of noncompliance. The site assessment report shall include a description of:
   A. the source and cause of contamination;
   B. any imminent hazards to public health and safety and actions taken to mitigate them;
   C. all receptors and exposure pathways;
   D. the horizontal and vertical extent of soil and groundwater contamination and all factors affecting contaminant transport; and
   E. any geological and hydrogeological features influencing the movement or chemical or physical character of the contaminants; and
4. submit a corrective action plan and a proposed schedule for implementation of the corrective action to the Director for approval. For approving the proposed plan and schedule, the Director shall consider the compliance history of the well owner, the severity and extent of noncompliance, and any other criteria necessary for the protection of human health and the environment. The corrective action plan shall include:
   A. a description of the proposed corrective action and reasons for its selection;
   B. specific plans, including engineering details where applicable, for restoring the groundwater quality and for restoring the integrity of the injection facility if the injection activity is to continue;
   C. a schedule for the implementation and operation of the proposed plan; and
   D. a monitoring plan for evaluating the effectiveness of the proposed corrective action.

History Note: Authority G.S. 87-87; 87-88; 143-211; 143-215.1A; 143-215.3(a)(1); 143-215.3(c);
Eff. August 1, 1982;
Amended Eff. May 1, 2012; September 1, 1996; March 1, 1984.

15A NCAC 02C .0207 MECHANICAL INTEGRITY

(a) An injection well has internal mechanical integrity when there is no leak in the casing, tubing, or packer as demonstrated by one of the following methods:

1. monitoring of the tubing-casing annulus pressure, following an initial pressure test, with sufficient frequency to be representative as determined by the Director. This test must be performed at the well head while maintaining an annulus pressure different from atmospheric pressure;
2. pressure testing with liquid or gas; or
3. any other method proposed by the permittee and approved by the Director as equally effective.
(b) An injection well has external mechanical integrity when there is no fluid movement into groundwaters through vertical channels adjacent to the injection well bore as determined by one of the following methods:
   (1) the results of a temperature or noise log;
   (2) grouting records plus predictive calculations demonstrating that the injection pressures will not exceed the strength of the grout; or
   (3) any other method proposed by the permittee and approved by the Director as equally effective.

(c) In conducting and evaluating the tests enumerated in this Section or other tests allowed by the Director, the owner or operator shall apply methods and standards generally accepted in the industry. When the well owner or operator reports the results of mechanical integrity tests, a description of the test(s) and the method(s) used shall be included. The Director shall review monitoring and other test data submitted since the previous evaluation.

(d) The Director may require additional or alternative tests if the results presented by the owner or operator under Paragraph (c) of this Rule are not satisfactory to demonstrate that an injection well has mechanical integrity.

(e) If an injection well fails to demonstrate mechanical integrity, the well owner or operator shall take corrective action as specified in Rule .0206 of this Section.

History Note: Authority G.S. 87-87; 143-211; 143-215.1A; 143-215.3(a)(1); 143-215.3(c);
Eff. August 1, 1982;
Amended Eff. May 1, 2012; September 1, 1996; March 1, 1984.

15A NCAC 02C .0208 FINANCIAL RESPONSIBILITY
When required by the rules of this Section, the permittee shall maintain and demonstrate financial responsibility and resources in the form of performance bonds, trust funds, surety bonds, letters of credit, financial tests, insurance or corporate guarantees, or other forms of financial assurances approved by the Director as equivalent to close, plug, and abandon the injection operation.

History Note: Authority G.S. 87-87; 87-88; 143-211; 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 40 C.F.R. Part 144.52(a)(7); 40 C.F.R. Part 145.11(a)(20);
Eff. August 1, 1982;
Amended Eff. May 1, 2012; September 1, 1996.

15A NCAC 02C .0209 CLASSIFICATION OF INJECTION WELLS
Injection Wells are classified as follows:

(1) Class 1. No person shall construct, use, or operate an injection well of this class. This class applies to industrial, municipal, and nuclear disposal wells that are used to inject wastes beneath the lowermost formation containing underground sources of drinking water. A description of the primary function for wells of this class is as follows:
   (a) Hazardous Waste Disposal Well. These wells are used by generators of hazardous wastes or owners of hazardous waste management facilities to inject hazardous waste.
   (b) Industrial Disposal Well. These wells are used to inject non-hazardous industrial waste.
   (c) Municipal Disposal Well. These wells are used to inject non-hazardous waste.
   (d) Nuclear Disposal Well. These wells are used to inject nuclear waste.

(2) Class 2. No person shall construct, use, or operate an injection well of this class. This class applies to oil and gas production and storage related injection wells and includes wells which are used to inject fluids:
   (a) which are brought to the surface in connection with natural gas storage operations or conventional oil or natural gas production;
   (b) for enhanced recovery of oil or natural gas; and
   (c) for storage of hydrocarbons which are liquid at standard temperature and pressure.

(3) Class 3. No person shall construct, use, or operate an injection well of this class. This class applies to wells which are used for the purpose of extraction of minerals or energy. A description of the primary function for wells of this class is as follows:
   (a) In Situ Production of Uranium or Other Metals. This category includes only in-situ production from ore bodies that have not been conventionally mined. Solution mining of conventional mines such as stopes leaching is included in Class 5.
   (b) Solution Mining Well. These wells are used in the solution mining of salts or potash.
   (c) Sulfur Mining Well. These wells are used in the mining of sulfur by the Frasch process.

(4) Class 4. No person shall construct, use, or operate an injection well of this class. This class applies to injection wells that are used to inject hazardous wastes into or above a formation containing an underground source of drinking water and includes wells used by:
   (a) generators of hazardous wastes or radioactive wastes; and
   (b) owners of hazardous waste management facilities, or radioactive waste disposal sites.

(5) Class 5. This class applies to all injection wells not included in Class 1, 2, 3, 4, or 6.
   (a) The construction, use, or operation of the following Class 5 injection well types is prohibited. A description of the primary function for these prohibited Class 5 wells is as follows:
(i) Agricultural Drainage Well. These wells receive irrigation tailwaters, other field drainage, animal yard, feedlot, or dairy runoff;
(ii) Air Scrubber Waste Disposal Well. These wells are used to inject wastes from air scrubbers;
(iii) Gaseous Hydrocarbon Storage Well. These wells are used for the storage of hydrocarbons which are gases at standard temperature and pressure;
(iv) Groundwater Aquaculture Return Flow Well. These wells inject groundwater or surface water that has been used to support aquaculture;
(v) In-situ Fossil Fuel Recovery Well. These wells are used for the in-situ recovery of coal, lignite, oil shale, and tar sands;
(vi) Mining, Sand, or Other Backfill Well. These wells are used to inject a mixture of fluid and sand, mill tailings, and other solids into mined out portions of subsurface mines, whether the injectant is a radioactive waste or not. This also includes wells used to control mine fires and acid mine drainage wells;
(vii) Motor Vehicle Waste Disposal Well. These wells receive wastes from motor vehicle facilities and include autobody repair shops, new and used car dealerships, specialty repair shops (e.g., transmission, muffler, and radiator repair shops and any facility that steam cleans or otherwise washes undercarriages or engine parts or does any vehicular repair work);
(viii) Sewage or Wastewater Disposal Well. These wells are used to inject sewage or wastewater from any source to the groundwaters of the State. This includes cesspools and abandoned drinking water wells;
(ix) Solution Mining Well. These wells are used in solution mining in conventional mines, such as stopes leaching;
(x) Special Drainage Well. These wells are used for disposing of water from sources other than direct precipitation. Examples of this well type include: landslide control drainage wells, water tank overflow drainage wells, swimming pool drainage wells, and lake control drainage wells; and
(xi) Water Softener Regeneration Brine Disposal Well. These wells are used to inject regeneration wastes from water softeners.

(b) The construction, use, or operation of the following Class 5 injection well types may be approved by the Director provided that the injected material does not contain any waste or any substance of a composition and concentration such that, if it were discharged to the land or waters of the state, would adversely affect human health or would otherwise render those waters unsuitable for their best intended usage:

(i) Aquifer Recharge Wells specified in Rule .0218 of this Section;
(ii) Aquifer Storage and Recovery Wells specified in Rule .0219 of this Section;
(iii) Aquifer Test Wells specified in Rule .0220 of this Section;
(iv) Experimental Technology Wells specified in Rule .0221 of this Section;
(v) Geothermal Aqueous Closed-Loop Wells specified in Rule .0222 of this Section;
(vi) Geothermal Direct Expansion Closed-Loop Wells specified in Rule .0223 of this Section;
(vii) Geothermal Heating/Cooling Water Return Wells specified in Rule .0224 of this Section;
(viii) Groundwater Remediation Wells specified in Rule .0225 of this Section;
(ix) Salinity Barrier Wells specified in Rule .0226 of this Section;
(x) Stormwater Drainage Wells specified in Rule .0227 of this Section;
(xi) Subsidence Control Wells specified in Rule .0228 of this Section;
(xii) Tracer Wells specified in Rule .0229 of this Section; and
(xiii) Other Wells specified in Rule .0230 of this Section;

(6) Class 6. No person shall construct, use, or operate an injection well of this class. This class applies to wells that are used for containment of a gaseous, liquid, or supercritical carbon dioxide stream in subsurface geologic formations.

History Note: Authority G.S. 87-87; 87-94; 87-95; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 143-215.6(c); Eff. August 1, 1982; Amended Eff. May 1, 2012; September 1, 1996; March 1, 1984.

15A NCAC 02C .0210 REQUIREMENTS: WELLS USED TO INJECT WASTE OR CONTAMINANTS
The owner of any well that has been used to inject wastes or contaminants, with the exception of wells permitted in accordance with this Section, shall take corrective action as specified in Rule .0206(b) of this Section.

History Note: Authority G.S. 87-87; 87-88; 143-214.2; 143-215.1A; Eff. August 1, 1982; Amended Eff. September 1, 1996; March 1, 1984.
A permit shall be obtained from the Director prior to constructing, operating, or using any well for injection unless the well is deemed permitted in accordance with the rules of this Section. No permit shall be granted for the injection of wastes or any substance of a composition and concentration such that, if it were discharged to the land or waters of the state, would adversely affect human health or would otherwise render those waters unsuitable for their best intended usage unless specifically provided for by Statute or by the rules in this Section.

In making any determination of well construction, operation, and maintenance, the Director shall make the determination based on the rules of this Section.

No person shall construct, operate, maintain, convert, plug, abandon, or conduct any other injection activity in a manner that allows the movement of fluid containing any contaminant into underground sources of drinking water if the presence of that contaminant may cause a violation of any applicable groundwater quality standard specified in Subchapter 02L or may otherwise adversely affect human health. The applicant for a permit shall have the burden of showing that the requirements of this Paragraph are met.

If at any time the Director learns that any injection well may cause a violation of any applicable groundwater quality standard specified in Subchapter 02L not authorized by the rules of this Section, the Director shall do one of the following:

- require an individual permit for injection wells that are otherwise permitted by rule;
- require such actions as may be necessary to prevent the violation, including corrective action as required in Rule .0206 of this Section; or
- take enforcement action as provided for in G.S. 87-91, G.S. 87-94, or G.S. 87-95.

All permit applications shall be signed as follows:

- For a corporation: by a responsible corporate officer. For the purposes of this Section, a responsible corporate officer means a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation. [Note: The Division does not require specific assignments or delegations of authority to responsible corporate officers. The Division will presume that these responsible corporate officers have the requisite authority to sign permit applications unless the corporation has notified the Division to the contrary. Corporate procedures governing authority to sign permit applications may provide for assignment or delegation to applicable corporate positions.]
- For a partnership or sole proprietorship: by a general partner or the proprietor, respectively;
- For a municipality, state, federal, or other public agency: by either a principal executive officer or ranking elected official;
- For all other persons: by the well owner; or
- For any other person authorized to act on behalf of the applicant: documentation shall be submitted with the permit application package that identifies the person, grants them specific signature authority, and is signed and dated by the applicant.

The person signing the permit application shall certify that the data furnished on the application is accurate and that the injection well will be operated in accordance with the approved specifications and conditions of the permit.

All reports shall be signed by a person described in Paragraph (e) of this Rule. All records, reports, and information required to be submitted to the Director and public comment on these records, reports, or information shall be disclosed to the public unless the person submitting the information can show that such information, if made public, would disclose methods or processes entitled to protection as trade secrets as defined in G.S. 66-152. The Director shall determine which information is entitled to confidential treatment. In the event the Director determines that such information is entitled to be treated as confidential information as defined in G.S. 132-1.2, the Director shall take steps to protect such information from disclosure.

The Director shall consider the cumulative effects of drilling and construction of multiple wells and operation of all proposed wells during evaluation of permit applications.

Permits shall be issued for a period not to exceed five years from the date of issuance. Permits are considered active until all permit requirements have been met and documentation has been received indicating that the wells meet one of the following conditions:

- The wells are temporarily or permanently abandoned in accordance with Rule .0240 of this Section;
- the wells have been converted to some other use; or
- the wells are permitted under another permit issued by the appropriate permitting authority for that activity.

All facilities shall, at all times, be operated and maintained to achieve compliance with the rules of this Section. The permittee shall allow the Director, or an authorized representative, upon their presentation of credentials and other documents as may be required by law, to:

- enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of the permit;
- have access to and copy, during normal business hours, any records that must be kept under the conditions of the permit;
- inspect, at reasonable times, any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under the permit; and
(4) sample or monitor, at reasonable times, and for the purposes of assuring permit compliances or as otherwise authorized, any substances or parameters.

(l) The permit may be modified, revoked and reissued, or terminated by the Director in whole or part for actions which would adversely affect human health or the environment. Such actions may include:

   (1) violation of any terms or conditions of the permit;
   (2) obtaining a permit by misrepresentation or failure to disclose fully all relevant facts; or
   (3) refusal of the permittee to allow authorized employees of the Division upon proper presentation of credentials to:

   (A) enter upon permittee's premises on which a system is located in which any records are required to be kept under terms and conditions of the permit;
   (B) have access to and copy any records required to be kept under terms and conditions of the permit;
   (C) inspect any monitoring equipment or method required in the permit; or
   (D) collect any sample from the injection facility.

(m) The filing of an application by the permittee for a permit modification, revocation and reissuance, termination, or a notification of planned changes or anticipated noncompliance, shall not stay any permit condition.

(n) The permit shall not convey any property rights of any sort or any exclusive privilege.

(o) The permittee shall furnish to the Director any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing or terminating the permit, or to determine compliance with the permit. The permittee shall also furnish to the Director, upon request, copies of records required by the permit to be kept.

(p) The permittee shall retain copies of all monitoring information, including all calibration and maintenance records, all original strip chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit, for a period of at least three years from the date of the sample, measurement, report, or application. Records of monitoring information shall include the:

   (1) date, place, and time of sampling or measurements;
   (2) individual(s) who performed the sampling or measurements;
   (3) date(s) analyses were performed;
   (4) individual(s) who performed the analyses;
   (5) analytical techniques or methods used;
   (6) results of any such sampling, measurements, and analyses; and
   (7) description and date of any maintenance activities performed including the name and contact information of the individual(s) performing such activities.

(q) The permit shall not be transferred to any person without the submission of a permit ownership or name change request to the Director. The Director may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate such other requirements as may be appropriate.

(r) The permittee shall report any monitoring or other information that indicates noncompliance with a specific permit condition, that a contaminant may cause a violation of applicable groundwater quality standards specified in Subchapter 02L, or that a malfunction of the injection system may cause the injected fluids to migrate outside the approved injection zone or area. The information shall be provided to the Director orally within 24 hours of the occurrence and as a written submission within five days of the occurrence. The written submission shall contain a description of the noncompliance and its cause, the period of noncompliance, including dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue, and any steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

(s) The Commission may delegate, through a Memorandum of Agreement, to another state agency the authority to permit injection wells that are an integral part of a facility requiring a permit from that agency.

(t) Failure to comply with the rules of this Section or any permit issued individually or by rules of this Section may result in enforcement action as provided for in G.S. 87-91, G.S. 87-94, or G.S. 87-95.

15A NCAC 02C .0217 PERMITTING BY RULE

(a) The following injection well systems are deemed to be permitted by the rules of this Section pursuant to G.S. 87-88(a) and it shall not be necessary for the Division to issue an individual permit for the construction or operation of the following injection well systems providing that the system does not result in the violation of any assigned surface water, groundwater, or air quality standard; there is no groundwater discharge of the injectant into surface waters; and all criteria for the specific systems are met:

1. Aquifer Test Wells specified in Rule .0220 of this Section;
2. Geothermal Aqueous Closed Loop Wells specified in Rule .0222 of this Section;
3. Geothermal Direct Expansion Closed Loop Wells specified in Rule .0223 of this Section;
4. Groundwater Remediation Wells specified in Rule .0225 of this Section; and
5. Stormwater Drainage Wells specified in Rule .0227 of this Section.

(b) Any violation of groundwater standards not authorized by the rules of this Section shall be treated in accordance with Rule .0206 of this Section.

(c) An injection well system permitted by rule under the rules of this Section shall remain permitted by rule until such time as the Director determines that it shall not be deemed to be permitted. This determination shall be made based on compliance with the provisions of the rules of this Section.

(d) If the Director determines that an injection well system shall not be permitted by rule, the Director shall require the owner of the injection well system to obtain an individual permit.

History Note: Authority G.S. 87-87; 87-88(a);

15A NCAC 02C .0218 AQUIFER RECHARGE WELLS

Aquifer Recharge Wells are used to recharge depleted aquifers and inject uncontaminated water of equal or better quality than the aquifer being recharged. The requirements for Aquifer Recharge Wells shall be the same as described in Rule .0219 of this Section except that the Director may impose additional requirements for the protection of human health and the environment based on site specific criteria, existing or projected environmental impacts, compliance with the provisions of the rules of this Section, or the compliance history of the facility owner.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20);
15A NCAC 02C .0219  **AQUIFER STORAGE AND RECOVERY WELLS**

(a) Aquifer Storage and Recovery Wells are used to inject potable water for the purposes of subsurface storage and for later recovery of the injected water. All Aquifer Storage and Recovery Wells require permits.

(b) Permit Applications. In addition to the permit requirements set forth in Rule .0211 of this Section, an application shall be submitted, in duplicate, to the Director on forms furnished by the Director and shall include the following:

1. **Site Description** that includes the following:
   - (A) the name of the well owner or person otherwise legally responsible for the injection well, his or her mailing address and telephone number, and status as a federal, state, private, public, or other entity;
   - (B) the name of the property owner, if different from the well owner, their physical address, mailing address, and telephone number;
   - (C) the name, mailing address, telephone number, and geographic coordinates of the facility for which the application is submitted; and
   - (D) a list of all permits associated with the injection well system.

2. **Project Description.** A description of what problem the project is intended to achieve and shall include the following:
   - (A) history and scope of the problem or objective;
   - (B) what is currently being done to solve the problem or achieve the objective;
   - (C) why existing practices are insufficient to solve the problem or achieve the objective;
   - (D) what other alternatives were considered to solve the problem or achieve the objective; and
   - (E) how this option was determined to be the most effective or desirable to solve the problem or achieve the objective.

3. **Demonstration of Financial Responsibility** as required in Rule .0208 of this Section.

4. **Injection Zone Determination.** The applicant shall specify the horizontal and vertical portion of the injection zone within which the proposed injection activity shall occur based on the hydraulic properties of that portion of the injection zone specified. No violation of groundwater quality standards specified in Subchapter 02L resulting from the injection shall occur outside the specified portion of the injection zone as detected by a monitoring plan approved by the Director.

5. **Hydrogeologic Evaluation.** If required by G.S. 89E, G.S. 89C, or G.S. 89F, a licensed geologist, professional engineer, or licensed soil scientist shall prepare a hydrogeologic evaluation of the facility to a depth that includes the injection zone determined in accordance with Subparagraph (b)(4) of this Rule. A description of the hydrogeologic evaluation shall include all of the following:
   - (A) regional and local geology and hydrogeology;
   - (B) changes in lithology underlying the facility;
   - (C) depth to the mean seasonal high water table;
   - (D) hydraulic conductivity, transmissivity, and storativity of the injection zone based on tests of site-specific material, including a description of the test(s) used to determine these parameters;
   - (E) rate and direction of groundwater flow as determined by predictive calculations or computer modeling; and
   - (F) lithostatigraphic and hydrostratigraphic logs of test and injection wells.

6. **Area of Review.** The area of review shall be calculated using the procedure for determining the zone of endangering influence specified in 40 CFR 146.6(a). The applicant must identify all wells within the area of review that penetrate the injection or confining zone, and repair or permanently abandon all wells that are improperly constructed or abandoned.

7. **Analyses of the injection zone(s) including:**
   - (A) test results of the native groundwater and the proposed recharge water for the parameters listed in Subparagraph (b)(4) of this Rule;
   - (B) geochemical analyses of representative samples of the aquifer matrix to determine the type and quantity of reactive minerals; and
   - (C) evaluation of the chemical compatibility of the native groundwater, injected water, and the aquifer matrix using site specific geochemical data and hydraulic properties of the injection zones, geochemical modeling, and any other analytical tool required. The chemical compatibility evaluation shall identify potential changes in groundwater quality resulting from the injection activities within the area of review specified in Subparagraph (b)(6) of this Rule.

8. **Injection Procedure.** The applicant shall submit a description of the proposed injection procedure that includes the following:
   - (A) the proposed average and maximum daily rate and quantity of injectant;
   - (B) the average maximum injection pressure expressed in units of pounds per square inch (psi);
   - (C) calculation of fracture pressures of confining units expressed in units of psi; and
   - (D) the total or estimated volume to be injected.

9. **Injection well construction details including:**
   - (A) the number and depth of injection wells;
   - (B) indication of whether the injection wells are existing or proposed;
The applicant shall submit a monitoring plan to determine the injection zone, including water supply wells, monitoring wells, and wells proposed for use as injection or monitoring wells. Such data shall include:

- a list of monitoring parameters and analytical methods to be used;
- other parameters that may serve to indicate the progress of the intended reactions;
- a list of existing and proposed monitoring wells to be used; and
- a sampling schedule to monitor the proposed injection.

A tabulation of data on all existing or abandoned wells within the area of review of the injection well(s) that penetrate the proposed injection zone, including water supply wells, monitoring wells, and wells proposed for use as injection or monitoring wells. Such data shall include:

- a list of monitoring parameters and analytical methods to be used;
- other parameters that may serve to indicate the progress of the intended reactions;
- a list of existing and proposed monitoring wells to be used; and
- a sampling schedule to monitor the proposed injection.

Any existing sources of potential or known groundwater contamination, including waste storage, treatment, or disposal systems within the area of review of the injection well or well system.

Such other information as deemed necessary by the Director for the protection of human health and the environment.

The Director may establish maximum injection volumes and pressures necessary to assure that:

1. fractures are not initiated in the confining zone(s);
2. injected fluids do not migrate outside the injection zone or area;
3. injected fluids do not cause or contribute to the migration of contamination into uncontaminated areas; and
4. there is compliance with operating requirements.

Injection may not commence until construction is complete, the permittee has submitted notice of completion to the Director, and the Director has inspected or otherwise reviewed the injection well and finds it in compliance with the permit conditions. If the permittee has not received notice from the Director of intent to inspect or otherwise review the injection well within 10 days after the Director receives the notice, the permittee may commence injection.

Prior to granting approval for the operation, the Director shall consider the following information:

- all available logging and testing data on the well;
- a demonstration of mechanical integrity pursuant to Rule .0207 of this Section;
- the proposed operating procedures;
- the results of the formation testing program; and
- the status of corrective action on defective wells in the area of review.

Wells shall not be located where:

- surface water or runoff will accumulate around the well due to depressions, drainage ways, or other landscapes that will concentrate water around the well;
- a person would be required to enter confined spaces to perform sampling and inspection activities; or
- injectants or formation fluids would migrate outside the approved injection zone as determined by the applicant in accordance with Subparagraph (b)(4) of this Rule.
(2) The methods and materials used in construction shall not threaten the physical or mechanical integrity of the well during its lifetime and shall be compatible with the proposed injection activities.

(3) The well shall be constructed in such a manner that surface water or contaminants from the land surface cannot migrate along the borehole annulus either during or after construction.

(4) The borehole shall not penetrate to a depth greater than the depth at which injection will occur unless the purpose of the borehole is the investigation of the geophysical and geochemical characteristics of an aquifer. Following completion of the investigation, the borehole beneath the zone of injection shall be completely grouted to prevent the migration of any contaminants.

(5) Drilling fluids and additives shall contain only potable water and may be comprised of one or more of the following:
   (A) the formation material encountered during drilling;
   (B) materials manufactured specifically for the purpose of borehole conditioning or well construction; or
   (C) materials approved by the Director, based on a demonstration of not adversely affecting human health or groundwater quality.

(6) Only grouts listed under Rule .0107 of this Subchapter shall be used with the exception that bentonite grout shall not be used:
   (A) to seal zones of water with a chloride concentration of 1,500 milligrams per liter or greater as determined by tests conducted at the time of construction; or
   (B) in areas of the State subject to saltwater intrusion that may expose the grout to water with a chloride concentration of 1,500 milligrams per liter or greater at any time during the life of the well.

(7) The annular space between the borehole and casing shall be grouted:
   (A) with a grout that is non-reactive with the casing or screen materials, the formation, or the injectant;
   (B) from land surface to the top of the gravel pack and in such a way that there is no interconnection of aquifers or zones having differences in water quality that would result in degradation of any aquifer or zone; and
   (C) so that the grout extends outward from the casing wall to a minimum thickness equal to either one-third of the diameter of the outside dimension of the casing or two inches, whichever is greater; but in no case shall a well be required to have an annular grout seal thickness greater than four inches.

(8) Grout shall be emplaced around the casing by one of the following methods:
   (A) Pressure. Grout shall be pumped or forced under pressure through the bottom of the casing until it fills the annular space around the casing and overflows at the surface;
   (B) Pumping. Grout shall be pumped into place through a hose or pipe extended to the bottom of the annular space which can be raised as the grout is applied. The grout hose or pipe shall remain submerged in grout during the entire application; or
   (C) Other. Grout may be emplaced in the annular space by gravity flow in such a way to ensure complete filling of the space. Gravity flow shall not be used if water or any visible obstruction is present in the annular space at the time of grouting.

(9) All grout mixtures shall be prepared prior to emplacement per the manufacturer's directions with the exception that bentonite chips or pellets may be emplaced by gravity flow if water is present or otherwise hydrated in place.

(10) If an outer casing is installed, it shall be grouted by either the pumping or pressure method.

(11) The well shall be grouted within seven days after the casing is set or before the drilling equipment leaves the site, whichever occurs first.

(12) No additives that will accelerate the process of hydration shall be used in grout for thermoplastic well casing.

(13) A casing shall be installed that extends from at least 12 inches above land surface to the top of the injection zone.

(14) Wells with casing extending less than 12 inches above land surface may be approved by the Director only when one of the following conditions is met:
   (A) site specific conditions directly related to business activities, such as vehicle traffic, would endanger the physical integrity of the well; or
   (B) it is not operationally feasible for the well head to be completed 12 inches above land surface due to the engineering design requirements of the system.

(15) Multi-screened wells shall not connect aquifers or zones having differences in water quality which would result in a degradation of any aquifer or zone.

(16) Prior to removing the equipment from the site, the top of the casing shall be sealed with a water-tight cap or well seal, as defined in G.S. 87-85, to preclude contaminants from entering the well.

(17) Packing materials for gravel and sand packed wells shall be:
   (A) composed of quartz, granite, or other hard, non-reactive rock material;
   (B) clean, of uniform size, water-washed and free from clay, silt, or other deleterious material;
   (C) disinfected prior to subsurface emplacement;
   (D) emplaced such that it shall not connect aquifers or zones having differences in water quality that would result in the deterioration of the water qualities in any aquifer or zone;
   (E) evenly distributed around the screen and shall extend to a depth at least one foot above the top of the screen. A minimum one-foot thick seal, comprised of bentonite clay or other sealing material approved by the Director, shall be emplaced directly above and in contact with the packing material.
(18) Each injection well shall have a well identification plate that meets the criteria specified in Rule .0107 of this Subchapter.
(19) A hose bibb, sampling tap, or other collection equipment approved by the Director shall be installed on the line entering the injection well such that a sample of the injectant can be obtained immediately prior to its entering the injection well.
(20) If applicable, all piping, wiring, and vents shall enter the well through the top of the casing unless otherwise approved by the Director based on a design demonstrated to preclude surficial contaminants from entering the well.
(21) The well head shall be completed in such a manner so as to preclude surficial contaminants from entering the well and well head protection shall include:
   (A) an accessible external sanitary seal installed around the casing and grouting; and
   (B) a water-tight cap or seal compatible with the casing and installed so that it cannot be removed without the use of hand or power tools.

(f) Testing.
   (1) Appropriate logs and other tests conducted during the drilling and construction of the wells shall be submitted to the Director after completion of well construction. A descriptive report interpreting the results of such logs and tests shall be prepared by a log analyst and submitted to the Director after completion of the tests. The appropriateness of the logs and tests shall be determined by the Director based on the intended function, depth, construction, and other characteristics of the well; availability of similar data in the area of the drilling site; and the need for additional information that may arise from time to time as the construction of the well progresses. At a minimum, such logs and tests shall include:
      (A) lithostratigraphic logs of the entire borehole;
      (B) hydrosstratigraphic logs of the entire borehole; and
      (C) deviation checks conducted on all holes where pilot holes and reaming are used, and at sufficiently frequent intervals to assure that vertical avenues for fluid migration in the form of diverging holes are not created during drilling.
   (2) When the injection zone is a water-bearing formation, the following information concerning the injection zone as determined by the applicant in accordance with Subparagraph (b)(4) of this Rule shall be submitted to the Director after completion of the determinations in an integrated form which includes the following:
      (A) fluid pressure;
      (B) fluid temperature;
      (C) fracture pressure;
      (D) other physical and chemical characteristics of the injection zone;
      (E) physical and chemical characteristics of the formation fluids; and
      (F) compatibility of injected fluids with formation fluids.
   (3) When the injection formation is not a water-bearing formation, only the fracture pressure and other physical and chemical characteristics of the injection zone shall be determined or calculated and submitted to the Director after completion of the determinations.
   (4) Tests for mechanical integrity shall be conducted prior to operation and every 10 years thereafter in accordance with Rule .0207 of this Section. The Director may require more frequent mechanical integrity testing as set out in Rule .0207 of this Section.

(g) Operation and Maintenance.
   (1) Pressure at the well head shall be limited to a maximum which will ensure that the pressure in the injection zone does not initiate new fractures or propagate existing fractures in the injection zone, initiate fractures in the confining zone, or cause the migration of injected or formation fluids outside the injection zone or area.
   (2) Injection between the outermost casing and the well borehole is prohibited.
   (3) Monitoring of the operating processes at the well head shall be provided for by the well owner, as well as protection against damage during construction and use.

(h) Monitoring.
   (1) Monitoring shall be required by the Director to demonstrate protection of the groundwaters of the State.
   (2) In determining the type, density, frequency, and scope of monitoring, the Director shall consider the following:
      (A) physical and chemical characteristics of the injection zone;
      (B) physical and chemical characteristics of the injected fluid(s);
      (C) volume and rate of discharge of the injected fluid(s);
      (D) compatibility of the injected fluid(s) with the formation fluid(s);
      (E) the number, type and location of all wells, mines, surface bodies of water, and structures within the area of review;
      (F) proposed injection procedures;
      (G) expected changes in pressure, formation fluid displacement, and direction of movement of injected fluid;
      (H) proposals of corrective action to be taken in the event that a failure in any phase of injection operations that renders the groundwaters unsuitable for their best intended usage as defined in 15A NCAC 02L .0202; and
      (I) the life expectancy of the injection operations.
(3) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

(4) The following analytical parameters shall be included:
   (A) disinfectants and disinfection byproducts;
   (B) radium, radionuclides, and gross alpha radiation;
   (C) Reduction Potential (Eh), pH, Total Dissolved Solids (TDS), Biological Oxygen Demand (BOD), Total Oxygen Demand (TOD), Chemical Oxygen Demand (COD), temperature, conductivity, dissolved oxygen;
   (D) coliform, Escherichia coli (E. Coli), Giardia, Cryptosporidium;
   (E) parameters deemed appropriate by the Director based on the source water, injection zone formation materials, native groundwater, or any other reason deemed necessary to protect groundwater, human health, or the environment; and
   (F) other parameters for which National Primary and Secondary Drinking Water Standards have been established.

(5) Analysis of the physical, chemical, biological, or radiological characteristics of the injected fluid shall be made monthly or more frequently, as necessary, in order to provide representative data for characterization of the injectant.

(6) Continuous recording devices to monitor the injection pressure, flow, rate, and volume of injected fluid shall be installed.

(7) Monitoring wells associated with the injection site shall be monitored quarterly or on a schedule determined by the Director to detect any migration of injected fluids from the injection zone.

(8) Monitoring wells completed in the injection zone and any of those zones adjacent to the injection zone may be affected by the injection operations. If affected, the Director may require additional monitor wells located to detect any movement of injection fluids, process byproducts, or formation fluids outside the injection zone as determined by the applicant in accordance with Subparagraph (b)(4) of this Rule. If the operation is affected by subsidence or catastrophic collapse, the monitoring wells shall be located so that they will not be physically affected and shall be of an adequate number to detect movement of injected fluids, process byproducts, or formation fluids outside the injection zone or area. In determining the number, location and spacing of monitoring wells, the following criteria shall be considered by the Director:
   (A) the population relying on the groundwater resource affected, or potentially affected, by the injection operation;
   (B) the proximity of the injection operation to points of withdrawal of groundwater;
   (C) the local geology and hydrology;
   (D) the operating pressures;
   (E) the chemical characteristics and volume of the injected fluid, formation water, and process byproducts; and
   (F) the density of injection wells.

(i) Reporting.
   (1) A record of the construction, abandonment, or repairs of the injection well shall be submitted to the Director within 30 days of completion of the specified activities.
   (2) All sampling results shall be reported to the Division quarterly, or on a frequency determined by the Director, and based on the reaction rates, injection rates, likelihood of secondary impacts, and site-specific hydrogeologic information.
   (3) The results of tests required in Paragraph (f) of this Rule shall be submitted to the Director within 30 days of the completion of the test. Results may be submitted within an alternate timeframe approved by the Director.

(j) Public Notice. Public notice of intent to issue permits for applications submitted pursuant to this rule shall be given prior to permit issuance.
   (1) Such notice shall:
      (A) be posted on the Division website and given in press releases via media outlets having coverage within the area of review;
      (B) provide 30 days for public comments to be submitted to the Director; and
      (C) include a description of details of the project, such as the permit applicant; the location, number, and depth of injection wells; and the injectant type, source, and volume.
   (2) After the public comment period has ended the Director shall:
      (A) consider the comments submitted and determine if a public hearing is warranted;
      (B) determine if the draft permit shall be issued, modified, or denied; and
      (C) post notice on the Division website as of the final permitting action, which shall include the issued permit or the reason for denial if the permit was denied.
   (3) In determining if a public hearing is warranted, the Director's consideration shall include the following:
      (A) requests by property owners within the area of review;
      (B) potential harm to the public by not having a public hearing;
      (C) potential harm to the applicant due to the delay in having a public hearing; and
      (D) the likelihood of obtaining new information regarding the proposed injection.
15A NCAC 02C .0220 AQUIFER TEST WELLS
(a) Aquifer Test Wells are used to inject uncontaminated fluid into an aquifer to determine the aquifer characteristics.
(b) Injection wells of this type are permitted by rule when constructed and operated in accordance with this Rule.
(c) Only potable water may be injected through this type of injection well.
(d) Tests for mechanical integrity shall be conducted in accordance with Rule .0207 of this Section.
(e) Injection wells of this type shall be constructed in accordance with the well construction standards applicable to monitoring wells specified in Rule .0108 of this Subchapter;
(f) The operation of the aquifer test well shall not cause contaminated groundwater to migrate into an area not contaminated prior to initiation of injection activities or cause a violation of applicable groundwater quality standards as specified in Subchapter 02L.
(g) Within 30 days of a change of status of the well, the owner/operator shall provide the following information:
   (1) facility name, address, and location indicated by either:
       (A) latitude and longitude with reference datum, position accuracy, and method of collection; or
       (B) a facility site map with property boundaries;
   (2) name, telephone number, and mailing address of legal contact;
   (3) ownership of facility as a private individual or organization, or a federal, state, county, or other public entity;
   (4) number of injection wells and their construction details; and
   (5) well status as proposed, active, inactive, temporarily abandoned, or permanently abandoned.
(h) A record of the construction, abandonment, or repairs of the injection well shall be submitted to the Director within 30 days of completion of the specified activities.

15A NCAC 02C .0221 EXPERIMENTAL TECHNOLOGY WELLS
Experimental Technology Wells are used in experimental or unproven technologies where operation is in compliance with all appropriate rules and statutes. Rule requirements for Experimental Technology Wells shall be evaluated and treated as one of the injection well types in Rule .0209(5)(b) of this Section that the Director determines most closely resembles the equivalent hydrogeologic complexity and potential to adversely affect groundwater quality. The Director may impose additional requirements for the protection of human health and the environment based on site specific criteria, existing or projected environmental impacts, compliance with the provisions of the rules of this Section, or the compliance history of the facility owner.

15A NCAC 02C .0222 GEOTHERMAL AQUEOUS CLOSED-LOOP WELLS
(a) Geothermal Aqueous Closed-Loop Wells are used to house a subsurface system of closed-loop pipe that circulates potable water only or a mixture of potable water and performance-enhancing additives such as antifreeze, corrosion inhibitors, or scale inhibitors for heating and cooling purposes. Only additives that the Department of Health and Human Services’ Division of Public Health determines not to adversely affect human health shall be used.
(b) Permitted by Rule. All Aqueous Closed-Loop Geothermal Wells are permitted by rule when constructed and operated in accordance with the rules of this Section.
(c) Individual Permits. If an individual permit is required pursuant to Rule .0217 of this Section, then an application for permit renewal shall be made at least 120 days prior to the expiration date of the permit.
(d) Notification. In addition to the requirements set forth in Rule .0211 of this Section, notification for systems designed to serve a single family residence shall be submitted at least two business days prior to construction and at least 30 days for all other installations. The notification shall be submitted to the Director and to the county health department. The notification shall be on forms supplied by the Director and shall include:
   (1) the well owner’s name, address, telephone number, email address (if available), and status as a federal, state, private, public, or other activity. If the well operator is different from the owner then the same information shall be provided for the well operator.
   (2) the physical location of the well facility;
   (3) a description of the proposed injection activities;
   (4) a scaled, site-specific map showing the following:
(A) any water supply well and surface water body; septic system including drainfield, waste application area, and repair area; and any other potential sources of contamination listed in Subparagraph (e)(5) of this Rule within 250 feet of the proposed injection well(s);

(B) property boundaries within 250 feet of the parcel on which the proposed wells are located; and

(C) an arrow orienting the site to one of the cardinal directions;

(5) the types and concentrations of additives, if any, to be used in the closed-loop geothermal well system. All proposed additives not already approved for use at the time of application submittal shall be subject to a health risk evaluation. Only approved additives shall be used in any closed loop geothermal well system;

(6) plans and specifications of the surface and subsurface construction details of the system;

(7) the heating/cooling system installation contractor's name and certification number, address, email address (if available), and telephone number;

(8) description of how the items identified in Part (d)(4)(A) of this Rule will be protected during well construction; and

(9) such other information as deemed necessary by the Director for the protection of human health and the environment.

(e) Well Construction.

(1) Only tubing that meets the specifications in Chapter 12 of the North Carolina Mechanical Code shall be used.

(2) Drilling fluids and water produced during well construction shall be managed in such a way as to prevent direct discharges to surface waters as well as violations of groundwater and surface water quality standards. Plans for such preventive measures shall be retained onsite for use throughout the construction process.

(3) The well shall be constructed in such a manner that surface water or contaminants from the land surface cannot migrate along the borehole annulus at any time during or after construction.

(4) The well shall be located such that:

(A) the injection well is not in an area where surface water or runoff will accumulate around the well due to depressions, drainage ways, or other landscape features that will concentrate water around the well; and

(B) the injection well is not in an area that requires a person to enter confined spaces to perform sampling and inspection activities.

(5) The minimum horizontal separation from potential sources of groundwater contamination that exist at the time the well(s) are constructed shall be as follows, unless it can be demonstrated to the Director's satisfaction that a lesser separation distance will not adversely affect human health or cause a violation of a groundwater quality standard as specified in Subchapter 02L:

(A) Building perimeters, including any attached structures - 15 feet

(B) Septic systems including drainfield, waste application area, and repair area - 50 feet

(C) Sewage or liquid-waste collection or transfer facilities constructed to water main standards in accordance with 15A NCAC 02T .0305(g)(2) or Rule .1950(e) of Subchapter 18A, as applicable - 15 feet

(D) Sewage or liquid-waste collection or transfer facilities not constructed to water main standards in accordance with 15A NCAC 02T .0305(g)(2) or 15A NCAC 18A .1950(e), as applicable - 25 feet

(E) Chemical or petroleum fuel underground storage tank systems regulated under 15A NCAC 02N with secondary containment - 50 feet

(F) Chemical or petroleum fuel underground storage tank systems regulated under 15A NCAC 02N without secondary containment - 100 feet

(G) Above ground or underground storage tanks which contain petroleum fuels used for heating equipment, boilers or furnaces, with the exception of tanks used solely for storage of propane, natural gas, or liquefied petroleum gas - 50 feet

(H) Land-based or subsurface waste storage or disposal systems - 50 feet

(I) Gravesites - 50 feet

(J) Any other potential sources of contamination - 50 feet

(6) The methods and materials used in construction shall not threaten the physical and mechanical integrity of the well and any tubing during its lifetime and shall be compatible with the proposed injection activities.

(7) Drilling fluids and additives shall contain only potable water and may be comprised of one or more of the following:

(A) the formation material encountered during drilling;

(B) materials manufactured specifically for the purpose of borehole conditioning or well construction; or

(C) materials approved by the Director, based on a demonstration of not adversely affecting human health or the environment.

(8) Allowable grouts listed under Rule .0107 of this Subchapter shall be used with the exception that bentonite chips or pellets shall not be used.

(9) Bentonite grout shall not be used:

(A) to seal zones of water with a chloride concentration of 1,500 milligrams per liter or greater as determined by tests conducted at the time of construction, or

(B) in areas of the State subject to saltwater intrusion that may expose the grout to water with a chloride concentration of 1,500 milligrams per liter or greater at any time during the life of the well.

(10) No additives that will accelerate the process of hydration shall be used in grout for thermoplastic well casing.
Grout shall be placed the entire length of the well boring from the bottom of the boring to land surface or, if completed below land surface, to the well header or manifold connection.

The grout shall be emplaced by one of the following methods:

(A) Pressure. Grout shall be pumped or forced under pressure through the bottom of the casing until it fills the borehole or annular space around the casing and overflows at the surface;

(B) Pumping. Grout shall be pumped into place through a hose or pipe extended to the bottom of the borehole or annular space which can be raised as the grout is applied. The grout hose or pipe shall remain submerged in grout during the entire application; or

(C) Other. Grout may be emplaced in the borehole or annular space by gravity flow in such a way to ensure complete filling of the space. Gravity flow shall not be used if water or any visible obstruction is present in the borehole or annular space at the time of grouting.

If temporary outer casing is installed, it shall be removed during grouting of the borehole in such a way that maintains the integrity of the borehole and uniform grout coverage around the geothermal tubing.

If a permanent outer casing is installed:

(A) The space between the interior wall of the casing and the geothermal tubing shall be grouted the entire length of the well boring from the bottom of the boring to land surface or, if completed below land surface, to the well header or manifold connection;

(B) The annular space between the casing and the borehole shall be grouted with a grout that is non-reactive with the casing or the formation;

(C) Grout shall extend outward in all directions from the casing wall to borehole wall and have a minimum thickness equal to either one-third of the diameter of the outside dimension of the casing or two inches, whichever is greater; and

(D) In no case shall a well be required to have an annular grout seal thickness greater than four inches.

Grout emplacement shall not threaten the physical or mechanical integrity of the well.

The well shall be grouted within seven days after drilling is complete or before the drilling equipment leaves the site, whichever occurs first.

Prior to removing the equipment from the site, the top of the casing shall be sealed with a water-tight cap or well seal, as defined in G.S. 87-85, to preclude contaminants from entering the well.

Well head completion shall be conducted in such a manner so as to preclude surficial contaminants from entering the well.

Well Location. The location of each well boring and appurtenant underground piping leading to the heat exchanger(s) shall be identifiable such that they may be located, repaired, and abandoned as necessary after construction.

(1) The as-built locations of each well boring, header pit, and appurtenant underground piping shall be recorded on a scaled site-specific facility map, which shall be retained onsite and distributed as specified in Subparagraph (i)(1) of this Rule.

(2) Each well boring and header pit shall be located by a North Carolina registered land surveyor, a GPS receiver, or by triangulation from at least two permanent features on the site, such as building foundation corners or property boundary iron pins.

(3) Well boring and appurtenant underground piping locations shall be identifiable in the field by tracer wire and warning tape, concrete monuments, or any other method approved by the Director upon a demonstration that such a method provides a reliable and accurate method of detection.

(4) If tracer wire and warning tape are used, then tracer wire consisting of copper wire of at least 14 gauge shall be placed adjacent to all horizontal piping during pipe installation, and warning tape shall be installed directly above the horizontal piping approximately 12 inches below final grade.

(5) If concrete monuments are used, then each monument shall be located directly above each individual well, at the perimeter corners of each well field, or in the center of each well cluster. Each concrete monument shall be permanently affixed with an identification plate constructed of durable, weatherproof, rustproof metal or other material approved by the Director as equivalent, which shall be stamped with the following information:

(A) well contractor name and certification number;

(B) number and depth of the boring(s);

(C) grout depth interval;

(D) well construction completion date; and

(E) identification as a geothermal well/well field.

(g) Testing.

(1) Closed loop tubing shall pass a pressure test on-site prior to installation into the borehole. Any closed loop tubing that fails the pressure test shall either not be used or have the leaks located and repaired plus pass a subsequent pressure test prior to installation.

(2) The closed loop well system shall pass a pressure test after installation and prior to operation. Any pressure fluctuation other than that due to thermal expansion and contraction of the testing medium shall be considered a failed test. Any leaks shall be located and repaired prior to operating the system.

15A NCAC 02C .0223 GEOTHERMAL DIRECT EXPANSION CLOSED-LOOP WELLS
(a) Geothermal Direct Expansion Closed-Loop Wells are used to house a subsurface system of closed-loop pipe that circulates
refrigerant gas for heating and cooling purposes. Only gasses that the Department of Health and Human Services' Division of Public
Health determines not to adversely affect human health shall be used.
(b) Permitted by Rule. All Direct Expansion Closed-Loop Geothermal Wells are permitted by rule when constructed and operated in
accordance with the rules of this Section.
(c) Individual Permits. If an individual permit is required pursuant to Rule .0217 of this Section, then an application for permit
renewal shall be made at least 120 days prior to the expiration date of the permit.
(d) Notification. In addition to the requirements set forth in Rule .0211 of this Section, notification for systems designed to serve a
single family residence shall be submitted at least two business days prior to construction and at least 30 days for all other
installations. The notification shall be submitted to the Director and to the county health department. The notification shall be on
forms supplied by the Director and shall include:

1. the well owner's name, address, telephone number, email address (if available), and status as a federal, state, private,
public, or other activity. If the well operator is different from the owner then the same information shall be provided
for the well operator.
2. the physical location of the well;
3. a description of the proposed injection activities;
4. a scaled, site specific map showing the following:
   (A) any water supply well and surface water body; septic system including drainfield, waste application area,
   and repair area; and any other potential sources of contamination listed in Subparagraph (e)(6) of this Rule
   within 250 feet of the proposed injection well(s);
   (B) property boundaries within 250 feet of the parcel on which the proposed wells are located; and
   (C) an arrow orienting the site to one of the cardinal directions;
5. the type of gas to be used in the closed-loop geothermal well system. All proposed gases not already approved for
use at the time of application submittal shall be subject to a health risk evaluation. Only approved gases shall be
used in any closed loop geothermal well system;
6. plans and specifications of the surface and subsurface construction details of the system;
7. the heating/cooling system installation contractor's name and certification number, address, email address (if
available), and telephone number;
8. description of how the items identified in Part (d)(4)(A) of this Rule will be protected during well construction; and
9. such other information as deemed necessary by the Director for the protection of human health and the environment.
(e) Well Construction,
1. Only tubing that meets the specifications in Chapter 12 of the North Carolina Mechanical Code shall be used.
2. All systems shall be constructed with cathodic protection unless testing conducted in accordance with Paragraph (g)
of this Rule indicates that all pH test results are within the range of 5.5 to 11.0 standard units.
3. Drilling fluids and water produced during well construction shall be managed in such a way as to prevent direct
discharges to surface waters as well as violations of groundwater and surface water quality standards. Plans for such
preventive measures shall be retained onsite for use throughout the construction process.
4. The well shall be constructed in such a manner that surface water or contaminants from the land surface cannot
migrate along the borehole annulus at any time during or after construction.
5. The well shall be located such that:
(A) the injection well is not in an area where surface water or runoff will accumulate around the well due to depressions, drainage ways, or other landscape features that will concentrate water around the well; and
(B) the injection well is not in an area that requires a person to enter confined spaces to perform sampling and inspection activities.

(6) The minimum separation distance of the entire length of the borehole from potential sources of groundwater contamination that exist at the time the well(s) are constructed shall be as follows, unless it can be demonstrated to the Director's satisfaction that a lesser separation distance will not adversely affect human health or cause a violation of a groundwater quality standard as specified in Subchapter 02L:
(A) Building perimeters, including any attached structures - 15 feet
(B) Sewage or liquid-waste collection or transfer facilities constructed to water main standards in accordance with 15A NCAC 02T .0305(g)(2) or 15A NCAC 18A .1950(e), as applicable - 15 feet
(C) Bentonite grout shall not be used:
(D) Sewage or liquid-waste collection or transfer facilities not constructed to water main standards in accordance with 15A NCAC 02T .0305(g)(2) or 15A NCAC 18A .1950(e), as applicable - 25 feet
(E) Above ground or underground storage tanks which contain petroleum fuels used for heating equipment, boilers or furnaces, with the exception of tanks used solely for storage of propane, natural gas, or liquefied petroleum gas - 50 feet
(F) Land-based or subsurface waste storage or disposal systems - 50 feet
(G) Any other potential sources of contamination - 50 feet

(7) Angled boreholes shall not be drilled in the direction of underground petroleum or chemical storage tanks unless it can be demonstrated to the satisfaction of the Director that doing so will not adversely affect human health or cause a violation of a groundwater quality standard as specified in Subchapter 02L.

(8) The methods and materials used in construction shall not threaten the physical and mechanical integrity of the well during its lifetime and shall be compatible with the proposed injection activities.

(9) Drilling fluids and additives shall contain only potable water and may be comprised of one or more of the following:
(A) the formation material encountered during drilling;
(B) materials manufactured specifically for the purpose of borehole conditioning or well construction;
(C) materials approved by the Director, based on a demonstration of not adversely affecting human health or the environment.

(10) Allowable grouts listed under Rule .0107 of this Subchapter shall be used with the exception that bentonite chips or pellets shall not be used.

(11) Bentonite grout shall not be used:
(A) to seal zones of water with a chloride concentration of 1,500 milligrams per liter or greater as determined by tests conducted at the time of construction, or
(B) in areas of the State subject to saltwater intrusion that may expose the grout to water with a chloride concentration of 1,500 milligrams per liter or greater at any time during the life of the well.

(12) No additives that will accelerate the process of hydration shall be used in grout for thermoplastic well casing.

(13) Grout shall be placed the entire length of the well boring from the bottom of the boring to land surface or, if completed below land surface, to the well header or manifold connection.

(14) The grout shall be emplaced by one of the following methods:
(A) Pressure. Grout shall be pumped or forced under pressure through the bottom of the casing until it fills the borehole or annular area space the casing and overflows at the surface;
(B) Pumping. Grout shall be pumped into place through a hose or pipe extended to the bottom of the borehole or annular space which can be raised as the grout is applied. The grout hose or pipe shall remain submerged in grout during the entire application; or
(C) Other. Grout may be emplaced in the borehole or annular space by gravity flow in such a way to ensure complete filling of the space. Gravity flow shall not be used if water or any visible obstruction is present in the borehole or annular space at the time of grouting.

(15) If temporary outer casing is installed, it shall be removed during grouting of the borehole in such a way that maintains the integrity of the borehole and uniform grout coverage around the geothermal tubing.

(16) If a permanent outer casing is installed:
(A) The space between the interior wall of the casing and the geothermal tubing shall be grouted the entire length of the well boring from the bottom of the boring to land surface or, if completed below land surface, to the well header or manifold connection.
(B) The annular space between the casing and the borehole shall be grouted with a grout that is non-reactive with the casing or the formation.
(C) Grout shall extend outward in all directions from the casing wall to borehole wall and have a minimum thickness equal to either one-third of the diameter of the outside dimension of the casing or two inches, whichever is greater; and

(D) In no case shall a well be required to have an annular grout seal thickness greater than four inches.

(17) Grout emplacement shall not threaten the physical or mechanical integrity of the well.

(18) The well shall be grouted within seven days after drilling is complete or before the drilling equipment leaves the site, whichever occurs first.

(19) Prior to removing the equipment from the site, the top of the casing shall be sealed with a water-tight cap or well seal, as defined in G.S. 87-85, to preclude contaminants from entering the well.

(20) Well head completion shall be conducted in such a manner so as to preclude surficial contaminants from entering the well.

(f) Well Location. The location of each well boring and appurtenant underground piping leading to the heat exchanger(s) shall be identifiable such that they may be located, repaired, and abandoned as necessary after construction.

(1) The as-built locations of each well boring, header pit, and appurtenant underground piping shall be recorded on a scaled site-specific facility map, which shall be retained onsite and distributed as specified in Subparagraph (i)(1) of this Rule.

(2) Each well boring and header pit shall be located by a North Carolina registered land surveyor, a GPS receiver, or by triangulation from at least two permanent features on the site, such as building foundation corners or property boundary iron pins.

(3) Well boring and appurtenant underground piping locations shall be identifiable in the field by tracer wire and warning tape, concrete monuments, or any other method approved by the Director upon a demonstration that such a method provides a reliable and accurate method of detection.

(4) If tracer wire and warning tape are used, then tracer wire consisting of copper wire of at least 14 gauge shall be placed adjacent to all horizontal piping during pipe installation, and warning tape shall be installed directly above the horizontal piping approximately 12 inches below final grade.

(5) If concrete monuments are used, then each monument shall be located directly above each individual well, at the perimeter corners of each well field, or in the center of each well cluster. Each concrete monument shall be permanently affixed with an identification plate constructed of durable, weatherproof, rustproof metal or other material approved by the Director as equivalent, which shall be stamped with the following information:

   (A) well contractor name and certification number;
   (B) number and depth of the boring(s);
   (C) grout depth interval;
   (D) well construction completion date; and
   (E) identification as a geothermal well/well field.

(g) Testing.

(1) Closed loop tubing shall pass a pressure test on-site prior to installation into the borehole. Any closed loop tubing that fails the pressure test shall either not be used or have the leaks located and repaired plus pass a subsequent pressure test prior to installation.

(2) The closed loop well system shall pass a pressure test after installation and prior to operation. Any pressure fluctuation other than that due to thermal expansion and contraction of the testing medium shall be considered a failed test. Any leaks shall be located and repaired prior to operating the system.

(3) When not providing cathodic protection as specified in Subparagraph (e)(2) of this Rule drilling cuttings shall be tested for pH at a frequency of at least every 10 feet of boring length using a pH meter that has been calibrated prior to use according to the manufacturer's instructions.

(h) Operation.

(1) The well shall be afforded protection against damage during construction and use.

(2) The well shall be operated and maintained in accordance with the manufacturer's specifications throughout its operating life. Cathodic protection, if required, shall be maintained at all times in accordance with the manufacturer's specifications throughout the operating life of the well(s).

(i) Monitoring and Reporting.

(1) The well owner shall submit the as-built well locations as documented in accordance with Paragraph (f) of this Rule to the Director and applicable county health department. The well owner shall also record these documents with the register of deeds of the county in which the facility is located.

(2) Upon sale or transfer of the property, the owner shall give a copy of these records to the new property owner(s).

(3) The Director may require any monitoring necessary to demonstrate protection of waters of the state to the level of the applicable groundwater standards.

(4) The permittee shall report any leaks to the Division during the lifetime of the well.

(5) A record of the construction, abandonment, or repairs of the injection well shall be submitted to the Director within 30 days of completion of the specified activities.
15A NCAC 02C .0224 GEOTHERMAL HEATING/COOLING WATER RETURN WELLS

(a) Geothermal Heating/Cooling Water Return Wells reinject groundwater used to provide heating or cooling for structures. These wells may be approved by the Director only if the temperature of the injection fluid is not in excess of 30 degrees Fahrenheit above or below the naturally occurring temperature of the receiving groundwater. This includes wells using a geothermal fluid source. All Geothermal Heating/Cooling Water Return Wells require a permit.

(b) Permit Applications. In addition to the permit requirements set forth in Rule .0211 of this Section, an application shall be submitted, in duplicate, to the Director on forms furnished by the Director and shall include the following:

(1) the well owner's name, address, telephone number, email address (if available), and status as a federal, state, private, public, or other activity. If the well operator is different from the owner then the same information shall be provided for the well operator.

(2) the physical address of the location of the well site if different than the well owner's mailing address;

(3) a description of the injection activities proposed by the applicant;

(4) a scaled, site-specific map showing at a minimum, the following:
   (A) any water supply well and surface water body; septic system including drainfield, waste application area, and repair area; and any other potential sources of contamination listed under Rule .0107 of this Subchapter within 250 feet of the proposed injection well(s);
   (B) property boundaries within 250 feet of the parcel on which the proposed wells are located; and
   (C) an arrow orienting the site to one of the cardinal directions;

(5) the proposed average and maximum daily injection rate, volume, pressure, temperature, and quantity of fluid to be injected;

(6) plans and specifications of the surface and subsurface construction details of the system including a schematic of the injection and source well(s) construction;

(7) the heating/cooling system installation contractor's name, address, email address (if available), and telephone number; and

(8) such other information as deemed necessary by the Director for the protection of human health and the environment.

(c) Permit Renewals. Application for permit renewal shall be made at least 120 days prior to the expiration date of the permit.

(d) Well Construction.

(1) The water supply well shall be constructed in accordance with the requirements of Rule .0107 of this Subchapter.

(2) If a separate injection well is used then it shall also be constructed in accordance with the requirements of Rule .0107 of this Subchapter except that the entire length of the casing shall be grouted from the top of the gravel pack to the land surface in such a way that there is no interconnection of aquifers or zones having differences in water quality that would result in degradation of any aquifer or zone.

(3) For open-end wells, the casing shall be grouted from the bottom of the casing to the land surface in such a way that there is no interconnection of aquifers or zones having differences in water quality that would result in degradation of any aquifer or zone.

(4) The injection well system shall be constructed such that a sampling tap or other collection equipment approved by the Director provides a functional source of water when the system is operational. Such equipment shall provide the means to collect a water sample immediately after emerging from the water supply well and immediately prior to injection into the return well.

(e) Operation and Maintenance.

(1) Pressure at the well head shall be limited to a maximum which will ensure that the pressure in the injection zone does not initiate new fractures or propagate existing fractures in the injection zone, initiate fractures in the confining zone, or cause the migration of injected or formation fluids outside the injection zone or area.

(2) Injection between the outermost casing and the well borehole is prohibited.

(3) Monitoring of the operating processes shall be provided for by the well owner, as well as protection against damage during construction and use.

(f) Monitoring and Reporting.

(1) Monitoring of any well may be required by the Director as necessary to demonstrate adequate protection of waters of the state to the level of applicable groundwater standards.

(2) The well owner shall retain copies of records of any site maps showing the location of the injection wells, and any testing, calibration, or monitoring information done on-site. Upon sale or transfer of the property, the owner shall give a copy of these records to the new property owner(s).

(3) The permittee shall record the number and location of the wells with the register of deeds in the county in which the facility is located.

(4) A record of the construction, abandonment, or repairs of the injection well shall be submitted to the Director within 30 days of completion of the specified activities.
15A NCAC 02C .0225 GROUNDWATER REMEDIATION WELLS

(a) Groundwater Remediation Wells are used to inject additives, treated groundwater, or ambient air for the treatment of contaminated soil or groundwater. Only additives that the Department of Health and Human Services' Division of Public Health determines not to adversely affect human health shall be approved for injection. When on-site contaminated groundwater is used, the groundwater remediation injection wells shall be permitted in accordance with 15A NCAC 02T .1600.

(b) Permitted by Rule. The following are permitted by rule pursuant to Rule .0217 of this Section when constructed and operated in accordance with the rules of this Section, all criteria for the specific injection system are met, hydraulic or pneumatic fracturing are not conducted, and the injection wells or injection activities do not result in the violation of any groundwater or surface water standard outside the injection zone:

1. Passive Injection Systems. Injection wells that use in-well delivery systems to diffuse injectants into the subsurface;
2. Small-scale Injection Operations. Injection wells used to remediate contaminant plumes located within a land surface area not to exceed 10,000 square feet;
3. Pilot Tests. Preliminary studies conducted for the purpose of evaluating the technical feasibility of a remediation strategy in order to develop a full scale remediation plan for future implementation, and where the surface area of the injection zone wells are located within an area that does not exceed five percent of the land surface above the known extent of groundwater contamination. Pilot tests may involve multiple injection wells, injection events, and injectants within the specified area. An individual permit shall be required to conduct more than one pilot test on any separate groundwater contaminant plume;
4. Air Injection Wells. Injection wells used to inject ambient air to enhance in-situ treatment of groundwater.

(A) Air to be injected shall not exceed the ambient air quality standards set forth in 15A NCAC 02D .0400 and shall not contain petroleum or any other constituent that would cause a violation of groundwater standards specified in Subchapter 02L; and
(B) Injection wells of this type shall be constructed in accordance with the well construction standards applicable to monitoring wells specified in Rule .0108 of this Subchapter.

(c) Notification for Groundwater Remediation Wells described in Subparagraphs (b)(1) through (b)(3) of this Rule. Notification shall be submitted to the Director two weeks prior to injection on forms supplied by the Director. Such notification shall include the following:

1. Name and contact information of the well owner;
2. Name and contact information of the person who can answer technical questions about the proposed injection system if different from the well owner;
3. Geographic coordinates of the injection well or well field;
4. Maps of the injection zone relative to the known extent of contamination such as:
   (A) Contaminant plume map(s) with isoconcentration lines that show the horizontal extent of the contaminant plume in soil and groundwater, existing and proposed monitoring wells, and existing and proposed injection wells; and
   (B) Cross-section(s) to the known or projected depth of contamination that show the horizontal and vertical extent of the contaminant plume in soil and groundwater, changes in lithology, existing and proposed monitoring wells, and existing and proposed injection wells;
5. Purpose, scope, and goals of the proposed injection activity;
6. Name, volume, concentration, and Material Safety Data Sheet of each injectant;
7. Schedule of injection well construction and injection activities;
8. Plans and specifications of each injection well or well system, which include:
   (A) The number and depth of injection wells;
   (B) Indication whether the injection wells are existing or proposed;
   (C) Well contractor name and certification number; and
   (D) Indication of whether the injection wells are permanent wells, "direct push" temporary injection wells, or are subsurface distribution systems; and
9. Description of monitoring plan capable of determining if violations of groundwater quality standards specified in Subchapter 02L result from the injection activity.

(d) Notification for Air Injection Wells described in Subparagraph (b)(4) of this Rule shall be submitted to the Director two weeks prior to injection on forms supplied by the Director. Such notification shall include the following:

1. Facility name, address, and location indicated by either:
   (A) Latitude and longitude with reference datum, position accuracy, and method of collection; or
   (B) A facility site map with property boundaries;
2. Name, telephone number, and mailing address of legal contact;
3. Ownership of facility as a private individual or organization, or a federal, state, county, or other public entity;
4. Number of injection wells and their construction details; and
operating status as proposed, active, inactive, temporarily abandoned, or permanently abandoned.

(e) Permit Applications for all Groundwater Remediation Wells not Permitted by Rule. In addition to the permit requirements set forth in Rule .0211 of this Section, an application shall be submitted, in duplicate, to the Director on forms furnished by the Director and shall include the following:

1. Site description and incident information that include the following:
   - name of the well owner or person otherwise legally responsible for the injection wells, mailing address, telephone number, and status as a federal, state, private, public, or other entity;
   - name of the property owner, if different from the well owner, physical address, mailing address, and telephone number;
   - name, mailing address, telephone number, and geographic coordinates of the facility for which the application is submitted and a brief description of the nature of the business;
   - a description of the contamination incident including the source, type, cause, and release date(s) of the contamination; a list of all contaminants in the affected soil or groundwater; the presence and thickness of free product; and the maximum contaminant concentrations detected in the affected soil and groundwater;
   - the state agency responsible for management of the contamination incident, including the incident tracking number, and the incident manager’s name and telephone number; and
   - a list of all permits issued for the facility or contamination incident, including: Hazardous Waste Management program permits or approval under the Resource Conservation and Recovery Act (RCRA), waste disposal permits issued in accordance with G.S. 143-215.1, Sewage Treatment and Disposal Permits issued in accordance with G.S. 130A, and any other environmental permits required by state or federal law.

2. Injection Zone Determination. The applicant shall specify the horizontal and vertical portion of the injection zone within which the proposed injection activity shall occur based on the hydraulic properties of that portion of the injection zone specified. No violation of groundwater quality standards specified in Subchapter 02L resulting from the injection shall occur outside the specified portion of the injection zone as detected by a monitoring plan approved by the Division.

3. Hydrogeologic Evaluation. If required by G.S. 89E, G.S. 89C, or G.S. 89F, a licensed geologist, professional engineer, or licensed soil scientist shall prepare a hydrogeologic evaluation of the facility to a depth that includes the injection zone determined in accordance with Subparagraph (e)(2) of this Rule. The hydrogeologic description shall include all of the following:
   - regional and local geology and hydrogeology;
   - changes in lithology underlying the facility;
   - depth to bedrock;
   - depth to the mean seasonal high water table;
   - hydraulic conductivity, transmissivity, and storativity, of the injection zone based on tests of site-specific material, including a description of the test(s) used to determine these parameters;
   - rate and direction of groundwater flow as determined by predictive calculations or computer modeling; and
   - lithostratigraphic and hydrostratigraphic logs of test and injection wells.

4. Area of Review. The area of review shall be calculated using the procedure for determining the zone of endangering influence specified in 40 CFR 146.6(a). The applicant must identify all wells within the area of review that penetrate the injection or confining zone, and repair or permanently abandon all wells that are improperly constructed or abandoned.

5. Injectant Information. The applicant shall submit the following information for each proposed injectant:
   - injectant name and manufacturer, concentration at the point of injection, and percentage if present in a mixture with other injectants;
   - the chemical, physical, biological, or radiological characteristics necessary to evaluate the potential to adversely affect human health or groundwater quality;
   - the source of fluids used to dilute, carry, or otherwise distribute the injectant throughout the injection zone as determined in accordance with Subparagraph (e)(2) of this Rule. If any well within the area of review of the injection facility to be used as the fluid source, then the following information shall be submitted: location/ID number, depth of source, formation, rock/sediment type, and a chemical analysis of the water from the source well, including analyses for all contaminants suspected or historically recognized in soil or groundwater on the site;
   - a description of the rationale for selecting the injectants and concentrations proposed for injection, including an explanation or calculations of how the proposed injectant volumes and concentrations were determined;
   - a description of the reactions between the injectants and the contaminants present including specific breakdown products or intermediate compounds that may be formed by the injection;
   - a summary of results if modeling or testing was performed to investigate the injectant’s potential or susceptibility for biological, chemical, or physical change in the subsurface; and
   - an evaluation concerning the development of byproducts of the injection process, including increases in the concentrations of naturally occurring substances. Such an evaluation shall include the identification of the
specific byproducts of the injection process, projected concentrations of byproducts, and areas of migration as determined through modeling or other predictive calculations.

(6) Injection Procedure. The applicant shall submit a detailed description of the proposed injection procedure that includes the following:
   (A) the proposed average and maximum daily rate and quantity of injectant;
   (B) the average maximum injection pressure expressed in units of pounds per square inch (psi); and
   (C) the total or estimated total volume to be injected.

(7) Fracturing Plan. If hydraulic or pneumatic fracturing is proposed, then the applicant shall submit a detailed description of the fracturing plan that includes the following:
   (A) Material Safety Data Sheets of fracturing media including information on any proppants used;
   (B) a map of fracturing well locations relative to the known extent of groundwater contamination plus all buildings, wells, septic systems, underground storage tanks, and underground utilities located within the Area of Review as described in Subparagraph (e)(4) of this Rule;
   (C) a demonstration that buildings, wells, septic systems, underground storage tanks, and underground utilities will not be adversely affected by the fracturing process;
   (D) injection rate and volume;
   (E) orientation of bedding planes, joints, and fracture sets of the fracture zone;
   (F) performance monitoring plan for determining the fracture well radius of influence; and
   (G) if conducted, the results of geophysical testing or pilot demonstration of fracture behavior conducted in an uncontaminated area of the site.

(8) Injection well construction details including:
   (A) number and depth of injection wells;
   (B) number and depth of borings if using multi-level or "nested" well systems;
   (C) indication whether the injection wells are existing or proposed;
   (D) depth and type of casing;
   (E) depth and type of screen material;
   (F) depth and type of grout;
   (G) indication whether the injection wells are permanent or temporary "direct push" points; and
   (H) plans and specifications of the surface and subsurface construction details of each injection well or well system.

(9) Monitoring Wells. Monitoring wells shall be of sufficient quantity and location as determined by the Director so as to detect any movement of injection fluids, injection process byproducts or formation fluids outside the injection zone as determined by the applicant in accordance with Subparagraph (e)(2) of this Rule. The monitoring schedule shall be consistent with the proposed injection schedule, pace of the anticipated reactions, and rate of transport of the injectants and contaminants. The applicant shall submit a monitoring plan that includes the following:
   (A) target contaminants plus secondary or intermediate contaminants that may result from the injection;
   (B) other parameters that may serve to indicate the progress of the intended reactions;
   (C) a list of existing and proposed monitoring wells to be used; and
   (D) a sampling schedule to monitor the proposed injection.

(10) Well Data Tabulation. A tabulation of data on all existing or abandoned wells within the area of review of the injection well(s) that penetrate the proposed injection zone, including monitoring wells and wells proposed for use as injection wells. Such data shall include a description of each well's type, depth, record of abandonment or completion, and any additional information the Director may require.

(11) Maps and Cross-Sections. Scaled, site-specific site plans or maps depicting the location, orientation, and relationship of facility components including the following:
   (A) area map based on the most recent USGS 7.5' topographic map of the area, at a scale of 1:24,000 and showing the location of the proposed injection site;
   (B) topographic contour intervals showing all facility related structures, property boundaries, streams, springs, lakes, ponds, and other surface drainage features;
   (C) all existing or abandoned wells within the area of review of the injection well(s), listed in the tabulation required in Subparagraph (e)(10) of this Rule, that penetrate the proposed injection zone, including, water supply wells, monitoring wells, and wells proposed for use as injection wells;
   (D) potentiometric surface map(s) that show the direction of groundwater movement, existing and proposed wells;
   (E) contaminant plume map(s) with isoconcentration lines that show the horizontal extent of the contaminant plume in soil and groundwater, and existing and proposed wells;
   (F) cross-section(s) to the known or projected depth of contamination that show the horizontal and vertical extent of the contaminant plume in soil and groundwater, major changes in lithology, and existing and proposed wells; and
   (G) any existing sources of potential or known groundwater contamination, including waste storage, treatment, or disposal systems within the area of review of the injection well or well system.
(12) Such other information as deemed necessary by the director for the protection of human health and the environment.

(f) Injection Volumes. The Director may establish maximum injection volumes and pressures necessary to assure that:

(1) fractures are not initiated in the confining zone of the injection zone determined in accordance with Subparagraph (e)(2) of this Rule;

(2) injected fluids do not migrate outside the injection zone or area;

(3) injected fluids and fractures do not cause or contribute to the migration of contamination into uncontaminated areas; and

(4) there is compliance with operating requirements.

(g) Well Construction.

(1) Wells shall not be located where:

(A) surface water or runoff will accumulate around the well due to depressions, drainage ways, or other landscapes that will concentrate water around the well;

(B) a person would be required to enter confined spaces to perform sampling and inspection activities; and

(C) bentonite chips or pellets may be emplaced by gravity flow if water is present or otherwise hydrated in place.

(2) Wells used for hydraulic or pneumatic fracturing shall be located within the extent of known groundwater contamination but no closer than 75 feet to this boundary unless it can be demonstrated to the satisfaction of the Director that a lesser separation distance will not adversely affect human health or cause a violation of a groundwater quality standard as specified in Subchapter 02L, such as through the use of directional fracturing.

(3) The methods and materials used in construction shall not threaten the physical and mechanical integrity of the well during its lifetime and shall be compatible with the proposed injection activities.

(4) The well shall be constructed in such a manner that surface water or contaminants from the land surface cannot migrate along the borehole annulus either during or after construction.

(5) The borehole shall not penetrate to a depth greater than the depth at which injection will occur unless the purpose of the borehole is the investigation of the geophysical and geochemical characteristics of an aquifer. Following completion of the investigation the borehole beneath the zone of injection shall be grouted completely to prevent the migration of any contaminants.

(6) For "direct-push" temporary injection wells constructed without permanent or temporary casing, injection and well abandonment activities shall be conducted within the same working day as when the borehole is constructed.

(7) Drilling fluids and additives shall contain only potable water and may be comprised of one or more of the following:

(A) the formation material encountered during drilling;

(B) materials manufactured specifically for the purpose of borehole conditioning or well construction; and

(C) materials approved by the Director, based on a demonstration of not adversely affecting human health or groundwater quality.

(8) Only allowable grout listed under Rule .0107 of this Subchapter shall be used with the exception that bentonite grout shall not be used:

(A) to seal zones of water with a chloride concentration of 1,500 milligrams per liter or greater as determined by tests conducted at the time of construction, or

(B) in areas of the State subject to saltwater intrusion that may expose the grout to water with a chloride concentration of 1,500 milligrams per liter or greater at any time during the life of the well.

(9) The annular space between the borehole and casing shall be grouted:

(A) with a grout that is non-reactive with the casing or screen materials, the formation, or the injectant;

(B) from the top of the gravel pack to land surface and in such a way that there is no interconnection of aquifers or zones having differences in water quality that would result in degradation of any aquifer or zone; and

(C) so that the grout extends outward from the casing wall to a minimum thickness equal to either one-third of the diameter of the outside dimension of the casing or two inches, whichever is greater; but in no case shall a well be required to have an annular grout seal thickness greater than four inches.

(10) Grout shall be emplaced around the casing by one of the following methods:

(A) Pressure. Grout shall be pumped or forced under pressure through the bottom of the casing until it fills the annular space around the casing and overflows at the surface;

(B) Pumping. Grout shall be pumped into place through a hose or pipe extended to the bottom of the annular space which can be raised as the grout is applied. The grout hose or pipe shall remain submerged in grout during the entire application; or

(C) Other. Grout may be emplaced in the annular space by gravity flow in such a way to ensure complete filling of the space. Gravity flow shall not be used if water or any visible obstruction is present in the annular space at the time of grouting.

(11) All grout mixtures shall be prepared prior to emplacement per the manufacturer’s directions with the exception that bentonite chips or pellets may be emplaced by gravity flow if water is present or otherwise hydrated in place.

(12) If an outer casing is installed, it shall be grouted by either the pumping or pressure method.

(13) The well shall be grouted within seven days after the casing is set or before the drilling equipment leaves the site, whichever occurs first.
No additives that will accelerate the process of hydration shall be used in grout for thermoplastic well casing.

A casing shall be installed that extends from at least 12 inches above land surface to the top of the injection zone.

Wells with casing extending less than 12 inches above land surface and wells without casing may be approved by the Director only when one of the following conditions is met:

(A) site specific conditions directly related to business activities, such as vehicle traffic, would endanger the physical integrity of the well; or
(B) it is not operationally feasible for the well head to be completed 12 inches above land surface due to the engineering design requirements of the system.

Multi-screened wells shall not connect aquifers or zones having differences in water quality which would result in a degradation of any aquifer or zone.

Prior to removing the equipment from the site, the top of the casing shall be sealed with a water-tight cap or well seal, as defined in G.S. 87-85, to preclude contaminants from entering the well.

Packing materials for gravel and sand packed wells shall be:

(A) composed of quartz, granite, or other hard, non-reactive rock material;
(B) clean, of uniform size, water-washed and free from clay, silt, or other deleterious material;
(C) disinfected prior to subsurface emplacement;
(D) emplaced such that it shall not connect aquifers or zones having differences in water quality that would result in the deterioration of the water qualities in any aquifer or zone; and
(E) evenly distributed around the screen and shall extend to a depth at least one foot above the top of the screen. A minimum one foot thick seal comprised of bentonite clay or other sealing material approved by the Director shall be emplaced directly above and in contact with the packing material.

All permanent injection wells shall have a well identification plate that meets the criteria specified in Rule .0107 of this Subchapter.

A hose bibb, sampling tap, or other collection equipment approved by the Director shall be installed on the line entering the injection well such that a sample of the injectant can be obtained immediately prior to its entering the injection well.

If applicable, all piping, wiring, and vents shall enter the well through the top of the casing unless otherwise approved by the Director based on a design demonstrated to preclude surficial contaminants from entering the well.

The well head shall be completed in such a manner so as to preclude surficial contaminants from entering the well and well head protection shall include:

(A) an accessible external sanitary seal installed around the casing and grouting; and
(B) a water-tight cap or seal compatible with the casing and installed so that it cannot be removed without the use of hand or power tools.

For subsurface distribution systems the following shall apply:

(A) for systems designed to be constructed within seven feet of the land surface and above the seasonal high water table, the distribution system design volume, injection volume, and injection rate shall be based on the hydraulic conductivity of the geologic material having the lowest permeability as determined by appropriate in situ or laboratory test methods; and
(B) the land surface directly above all systems shall be covered with pavement or compacted soil or other suitable material to prevent stormwater or other fluids on the land surface from infiltrating into the subsurface distribution system.

(h) Mechanical Integrity. All permanent injection wells require tests for mechanical integrity, which shall be conducted in accordance with Rule .0207 of this Section.

(i) Operation and Maintenance.

(1) Unless permitted by this rule, pressure at the well head shall be limited to a maximum which will ensure that the pressure in the injection zone does not initiate new fractures or propagate existing fractures in the injection zone, initiate fractures in the confining zone, or cause the migration of injected or formation fluids outside the injection zone or area.

(2) Injection between the outermost casing and the well borehole is prohibited.

(3) Monitoring of the operating processes at the well head shall be provided for by the well owner, as well as protection against damage during construction and use.

(j) Monitoring.

(1) Monitoring of the injection well may be required by the Director to protect groundwaters of the State.

(A) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

(B) Analysis of the physical, chemical, biological, or radiological characteristics of the injectant shall be made monthly or more frequently, as approved by the Director, in order to provide representative data for characterization of the injectant.

(C) Monitoring of injection pressure, flow rate, and cumulative volume shall occur according to a schedule determined necessary by the Director.
(D) Monitoring wells associated with the injection site shall be monitored quarterly or on a schedule determined by the Director to detect any migration of injected fluids from the injection zone.

(2) In determining the type, density, frequency, and scope of monitoring, the Director shall consider the following:
   (A) physical and chemical characteristics of the injection zone;
   (B) physical and chemical characteristics of the injected fluid(s);
   (C) volume and rate of discharge of the injected fluid(s);
   (D) compatibility of the injected fluid(s) with the formation fluid(s);
   (E) the number, type and location of all wells, mines, surface bodies of water, and structures within the area of review;
   (F) proposed injection procedures;
   (G) expected changes in pressure, formation fluid displacement, and direction of movement of injected fluid;
   (H) proposals of corrective action to be taken in the event that a failure in any phase of injection operations that renders the groundwaters unsuitable for their best intended usage as defined in Rule .0202 of Subchapter 02L; and
   (I) the life expectancy of the injection operations.

(3) Monitoring wells completed in the injection zone and any of those zones adjacent to the injection zone may be affected by the injection operations. If affected, the Director may require additional monitor wells located to detect any movement of injection fluids, injection process byproducts, or formation fluids outside the injection zone as determined by the applicant in accordance with Subparagraph (e)(2) of this Rule. If the operation is affected by subsidence or catastrophic collapse, the monitoring wells shall be located so that they will not be physically affected and shall be of an adequate number to detect movement of injected fluids, process byproducts, or formation fluids outside the injection zone or area. In determining the number, location and spacing of monitoring wells, the following criteria shall be considered by the Director:
   (A) the population relying on the groundwater resource affected, or potentially affected, by the injection operation;
   (B) the proximity of the injection operation to points of withdrawal of groundwater;
   (C) the local geology and hydrology;
   (D) the operating pressures;
   (E) the chemical characteristics and volume of the injected fluid, formation water, and process byproducts; and
   (F) the density of injection wells.

(k) Reporting.

(1) For all injection wells, the well owner shall be responsible for submitting to the Director on forms furnished by the Director, or on an alternate approved form that provides the same information:
   (A) a record of the construction, abandonment, or repairs of the injection well within 30 days of completion of the specified activities;
   (B) the Injection Event Record within 30 days of completing each injection; and

(2) For injection wells requiring an individual permit, the following shall apply:
   (A) The well owner shall be responsible for submitting to the Director on forms furnished by the Director or on an alternate approved form, hydraulic or pneumatic fracturing performance monitoring results;
   (B) All sampling results shall be reported by the well owner to the Division quarterly or on a frequency determined by the Director based on the reaction rates, injection rates, likelihood of secondary impacts, and site-specific hydrogeologic information; and
   (C) A Final Project Evaluation report shall be submitted within nine months after completing all injection-related activities associated with the permit or produce a project interim evaluation before submitting a renewal application for the permit. This document shall assess the injection projects findings in a written summary. The final project evaluation shall also contain monitoring well sampling data, contaminant plume maps and potentiometric surface maps.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20); Eff. May 1, 2012.

15A NCAC 02C .0226 SALINITY BARRIER WELLS
Salinity Barrier Wells inject uncontaminated water into an aquifer to prevent the intrusion of salt water into the fresh water. The requirements for Salinity Barrier Wells shall be the same as in Rule .0219 of this Section except that the Director may impose additional requirements for the protection of human health and the environment based on site specific criteria, existing or projected environmental impacts, compliance with the provisions of the rules of this Section, or the compliance history of the facility owner.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20); Eff. May 1, 2012.
15A NCAC 02C .0227 STORMWATER DRAINAGE WELLS
(a) Stormwater Drainage Wells receive the flow of water that results from precipitation occurring immediately following rainfall or a snowmelt event.
(b) The following Stormwater Drainage Wells are permitted by rule pursuant to Rule .0217 of this Section:
   (1) systems designed in accordance with stormwater controls required by federal laws and regulations, state statutes and rules, or local controls adopted consistent with these federal or state requirements; and
   (2) roof-top runoff infiltration systems.
(c) Nothing in this Rule shall be construed as to allow untreated stormwater to be emplaced directly into any aquifer or to otherwise result in the violation of any groundwater quality standard as specified in Subchapter 02L.
(d) Reporting. Within 30 days of a change of status of the well, the owner/operator shall provide the following information:
   (1) facility name, address, and location indicated by either:
       (A) latitude and longitude with reference datum, position accuracy, and method of collection; or
       (B) a facility site map with property boundaries;
   (2) name, telephone number, and mailing address of legal contact;
   (3) ownership of facility as a private individual or organization, or a federal, state, county, or other public entity;
   (4) number of injection wells; and
   (5) well status as proposed, active, inactive, temporarily abandoned, or permanently abandoned.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20);

15A NCAC 02C .0228 SUBSIDENCE CONTROL WELLS
Subsidence Control Wells are used to inject uncontaminated fluids [to reduce or eliminate subsidence associated with overdraft of fresh water or other activities not related to oil or natural gas production. The requirements for Subsidence Control Wells shall be the same as described in Rule .0219 of this Section except that the Director may impose additional requirements for the protection of human health and the environment based on site specific criteria, existing or projected environmental impacts, compliance with the provisions of the rules of this Section, or the compliance history of the facility owner.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20);

15A NCAC 02C .0229 TRACER WELLS
Tracer Wells are used to inject substances for the purpose of determining hydrogeologic properties of aquifers. The requirements for Tracer Wells shall be the same as described in Rule .0225 of this Section except that the Director may impose additional requirements for the protection of human health and the environment based on site specific criteria, existing or projected environmental impacts, compliance with the provisions of the rules of this Section, or the compliance history of the facility owner.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20);

15A NCAC 02C .0230 OTHER WELLS
Rule requirements for Other Wells shall be evaluated and treated as one of the injection well types in Rule .0209(5)(b) of this Section that the Director determines most closely resembles the equivalent hydrogeologic complexity and potential to adversely affect groundwater quality. The Director may impose additional requirements for the protection of human health and the environment based on site specific criteria, existing or projected environmental impacts, compliance with the provisions of the rules of this Section, or the compliance history of the facility owner. The Director may permit by rule the emplacement or discharge of a fluid or solid into the subsurface for any activity that meets the definition of an “injection well” that the Director determines not to have the potential to adversely affect groundwater quality and does not fall under other rules in this Section.

History Note: Authority G.S. 87-87; 87-88; 87-90; 87-94; 87-95; 89E-13; 89E-18; 143-211; 143-214.2(b); 143-215.1A; 143-215.3(a)(1); 143-215.3(c); 150B-19(4); 40 CFR Part 144.52(a)(7); 40 CFR Part 145.11(a)(20);

15A NCAC 02C .0231 - .0239 RESERVED FOR FUTURE CODIFICATION

15A NCAC 02C .0240 ABANDONMENT AND CHANGE-OF-STATUS OF WELLS
(a) The well(s) shall be abandoned by the well owner in accordance with one of the following procedures or other alternatives approved by the Director based on a demonstration of not adversely affecting human health or the environment:
(1) Procedures for temporarily or permanently abandoning wells other than closed-loop geothermal wells shall be the same as described in Rule .0113 of this Subchapter.

(2) For temporarily abandoning a closed-loop geothermal well, the well shall be maintained whereby it is not a source or channel of contamination during the period of abandonment.

(3) Procedures for permanently abandoning closed-loop geothermal wells shall be as follows:
   (A) all casing, tubing or piping, and associated materials shall be removed prior to initiation of abandonment procedures if such removal will not cause or contribute to contamination of groundwater;
   (B) the boring shall be filled from bottom to top with grout through a hose or pipe which extends to the bottom of the well and is raised as the well is filled;
   (C) for tubing with an inner diameter of one-half inch or greater, the entire vertical length of the inner tubing shall be grouted;
   (D) for tubing with an inner diameter less than one-half inch, the tubing shall be refilled with potable water and capped or sealed at a depth not less than two feet below land surface in the event that the inner tubing cannot feasibly be grouted; and
   (E) any protective or surface casing not grouted in accordance with the requirements set forth in this Section shall be removed and grouted in accordance with the requirements set forth in this Section.

(4) In those cases when, as a result of the injection operations, a subsurface cavity has been created, the well shall be abandoned in such a manner that will prevent the movement of fluids into or between aquifers and in accordance with the terms and conditions of the permit.

(b) Any well which acts as a source or channel of contamination shall be brought into compliance with the standards and criteria of these rules, repaired, or permanently abandoned. Repair or permanent abandonment shall be completed within 15 days of the discovery of the violation.

(c) Exploratory or test wells, constructed for the purposes of obtaining information regarding an injection well site, shall be permanently abandoned in accordance with Rule .0113 of this Subchapter within two days after drilling or two days after testing is complete, whichever is less restrictive. An exception would be when a test well is being converted to a permanent injection well, in which case conversion shall be completed within 30 days.

(d) An injection well shall be permanently abandoned by the drilling contractor before removing his equipment from the site if the well casing has not been installed or has been removed from the well bore.

(e) The well owner is responsible for permanent abandonment of a well except when the well contractor is responsible due to improper location, construction, repair, or completion of the well.

15A NCAC 02C .0241 VARIANCE
(a) The Director may grant a variance from any construction or operation standards under the rules of this Section. Any variance shall be in writing by the person responsible for construction of the well for which the variance is sought. The Director shall grant the variance if the Director finds facts to support the following conclusions:
   (1) that the use of the well will not endanger human health and welfare or the groundwater; and
   (2) that construction or operation in accordance with the standards was not technically feasible or the proposed construction provides equal or better protection of the groundwater.

(b) The Director may require the variance applicant to submit such information as the Director deems necessary to make a decision to grant or deny the variance. The Director may impose such conditions on a variance or the use of a well for which a variance is granted as the Director deems necessary to protect human health and welfare and the groundwater resources. The findings of fact supporting any variance under this rule shall be in writing and made part of the variance.

(c) The Director shall respond in writing to a request for a variance within 30 days from the receipt of the variance request.

(d) For variances requested as a part of a permit application, the Director may include approval as a permit condition.

(e) A variance applicant who is dissatisfied with the decision of the Director may commence a contested case by filing a petition under G.S. 150B-23 within 60 days after receipt of the decision.

15A NCAC 02C .0242 DELEGATION
(a) The Director is delegated the authority to grant permission for well construction under G.S. 87-87.

(b) The Director is delegated the authority to give notices and sign orders for violations under G.S. 87-91.

(c) The Director may grant a variance from any construction standard, or the approval of alternate construction methods or materials, as specified under the rules of this Section.

History Note:  Authority G.S. 87-87(4); 143-215.1A; 143-215.3(a)(1); 143-215.3(a)(4);
