

OCT & NOV - Deep Guilds, Eno River State Park Site

Minimum Flow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

OCT & NOV - Deep Guilds, Eno River State Park Site

% MAF min flow - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

OCT & NOV - Deep Guilds, Eno River State Park Site

% Inflow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

APR thru JUN - Deep Guilds, Eno River State Park Site **Minimum Flow Approach - Habitat Effect as % of Unregulated Habitat**

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

APR thru JUN - Deep Guilds, Eno River State Park Site
% MAF min flow - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

APR thru JUN - Deep Guilds, Eno River State Park Site
% Inflow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

JUL thru SEP - Deep Guilds, Eno River State Park Site
Minimum Flow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

JUL thru SEP - Deep Guilds, Eno River State Park Site

% MAF min flow - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

JUL thru SEP - Deep Guilds, Eno River State Park Site

% Inflow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

DEC thru MAR - Deep Guilds, Eno River State Park Site

Minimum Flow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

DEC thru MAR - Deep Guilds, Eno River State Park Site

% MAF min flow - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario

DEC thru MAR - Deep Guilds, Eno River State Park Site

% Inflow Approach - Habitat Effect as % of Unregulated Habitat

Based on daily flows, Index B = Mean of habitat events between 10% and 90% exceedance

Numerical amount shown is Index B value under unregulated flow scenario
