Welcome
House Bill 894 Stakeholders
An Act To Improve Source Water Protection Planning
80+ people responded to our call for stakeholders

Professional associations
Non-profit organizations
Councils of government
Local government and local utilities
State and federal agencies
Industry reps/consultants
Others?
Objectives for today’s meeting:

- Provide orientation and background information
  Review the new legislation
  Describe existing tools and resources
- Share our approach to implement HB 894
- Get your feedback
Test your knowledge...

- A PWS system has at least _____ connections or it must serve _____ people
- There are _____ surface water systems in NC
- How is the number of surface water systems changing? ___________
- _____ people in NC get their water from a surface water system
Test your knowledge...

- A PWS system has at least 15 connections or it must serve 25 people
- There are 131 surface water systems in NC
- How is the number of surface water systems changing? decreasing
- 7.8 M people in NC get their water from a surface water system
NC Drinking Water Protection Program

We’ll try not to, but...

SWP – Source Water Protection
SWAP – Source Water Assessment Program
PCS – Potential Contaminant Source
PWS – Public Water Supply
Commission – NC Commission for Public Health
Stakeholder Role:

- Help us refine our approach
- Identify issues, concerns and solutions
- Review and critique draft rule language
Stakeholder Role:

- Help us refine our approach
- Identify issues, concerns and solutions
- Review and critique draft rule language

Agency Role:

- Facilitate stakeholder input
- Engage the rule-making process
- Implement resulting rules and regulations
HB 894: An Act to Improve Source Water Protection Planning

The accidental release of 4-methylcyclohexanemethanol in West Virginia and coal ash spills in NC have raised concerns about potential public health impacts of contaminants entering raw drinking water supplies. In an effort to mitigate these concerns, the legislature introduced HB 894. This bill, which was passed in its final form on August 11, 2014, mandates the development and implementation of source water protection (SWP) plans for "every supplier of water operating a public water system treating and furnishing water from surface supplies" (§ 130A 320 (c)). To date, SWP planning has occurred throughout the state on a voluntary basis and has followed a template recommended by US EPA. The intent on HB 894 is to expand on this template, with particular emphasis on emergency response protocols. The resulting SWP plans will allow local water systems to identify proactive and emergency response strategies best suited to their individual situations and concerns.
