Traumatic Brain Injury (TBI) and the Criminal Justice System

Traumatic brain injury is a bump, blow or jolt to the head that disrupts the way the brain normally works. It can cause cognitive, physical, emotional and behavioral challenges.

Awareness of TBI in the criminal justice system is important.

• A brain injury can affect a person’s behavior, ability to process information and physical condition.
• Many people involved in the criminal justice system are living with traumatic brain injury-related challenges that can complicate their self-management and treatment.
• According to the Centers for Disease Control and prevention (CDC), 25-87 percent of people involved with the criminal justice system report having a history of head injury or TBI as compared to 8.5 percent who report having this history in the general population.
• Women involved with the criminal justice system convicted of a violent crime are more likely to have sustained a pre-crime TBI and/or some other form of physical abuse (CDC).
• People involved with the criminal justice system who have experienced head injuries may also experience mental health problems such as severe depression and anxiety, substance use disorders, difficulty controlling anger, or suicidal thoughts and/or attempts (CDC).
• A TBI can contribute to situations that lead to disciplinary action within a correctional setting as well as challenges to re-entering the community successfully.

Some of the most common symptoms of TBI include but are not limited to:

• Difficulty with balance or muscle control
• Slurred speech, impaired vision and/or hearing
• Difficulty with attention, memory, understanding, and/or judgment
• Reduced problem-solving and decision-making skills
• Delayed thought processing and/or response time
• Impulsive behaviors
• Anxiousness, irritability or agitation
• Depression
• Seizures, fatigue or other medical conditions

In an effort to increase awareness, a person with a brain injury can carry a survivor wallet card to help avoid misunderstandings with law enforcement, first responders and others. The wallet card includes contact information, an emergency contact and possible symptoms of brain injury. The brain injury survivor wallet card can be found by clicking the link below or by visiting www.bianc.net

Click here for a printable version of the Brain Injury Survivor Wallet Card.
