ASSURANCES - NON-CONSTRUCTION PROGRAMS

Certain of these assurances may not be applicable to your project or program. If you have questions, please contact the awarding agency. Further, certain Federal awarding agencies may require applicants to certify to additional assurances. If such is the case, you will be notified.

As the duly authorized representative of the applicant I certify that the applicant:

1. Has the legal authority to apply for Federal assistance, and the institutional, managerial and financial capability (including funds sufficient to pay the non-Federal share of project costs) to ensure proper planning, management and completion of the project described in this application.

2. Will give the awarding agency, the Comptroller General of the United States, and if appropriate, the State, through any authorized representative, access to and the right to examine all records, books, papers, or documents related to the award; and will establish a proper accounting system in accordance with generally accepted accounting standard or agency directives.

3. Will establish safeguards to prohibit employees from using their positions for a purpose that constitutes or presents the appearance of personal or organizational conflict of interest, or personal gain.

4. Will initiate and complete the work within the applicable time frame after receipt of approval of the awarding agency.

5. Will comply with the Intergovernmental Personnel Act of 1970 (42 U.S.C. §§4728-4763) relating to prescribed standards for merit systems for programs funded under one of the nineteen statutes or regulations specified in Appendix A of OPM’s Standard for a Merit System of Personnel Administration (5 C.F.R. 900, Subpart F).

6. Will comply with all Federal statutes relating to nondiscrimination. These include but are not limited to: (a) Title VI of the Civil Rights Act of 1964 (P.L. 88-352) which prohibits discrimination on the basis of race, color or national origin; (b) Title IX of the Education Amendments of 1972, as amended (20 U.S.C. §§1681-1683, and 1685-1686), which prohibits discrimination on the basis of sex; (c) Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. §§794), which prohibits discrimination on the basis of handicaps; (d) the Age Discrimination Act of 1975, as amended (42 U.S.C. §§6101-6107), which prohibits discrimination on the basis of age; (e) the Drug Abuse Office and Treatment Act of 1972 (P.L. 92-255), as amended, relating to nondiscrimination on the basis of drug abuse; (f) the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act of 1970 (P.L. 91-616), as amended, relating to nondiscrimination on the basis of alcohol abuse or alcoholism; (g) §§523 and 527 of the Public Health Service Act of 1912 (42 U.S.C. §§290 dd-3 and 290 ee-3), as amended, relating to confidentiality of alcohol and drug abuse patient records; (h) Title VIII of the Civil Rights Act of 1968 (42 U.S.C. §§3601 et seq.), as amended, relating to nondiscrimination in the sale, rental or financing of housing; (i) any other nondiscrimination provisions in the specific statute(s) under which application for Federal assistance is being made; and (j) the requirements of any other nondiscrimination statute(s) which may apply to the application.

7. Will comply, or has already complied, with the requirements of Title II and III of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (P.L. 91-646) which provide for fair and equitable treatment of persons displaced or whose property is acquired as a result of Federal or federally assisted programs. These requirements apply to all interests in real property acquired for project purposes regardless of Federal participation in purchases.

8. Will comply with the provisions of the Hatch Act (5 U.S.C. §§1501-1508 and 7324-7328) which limit the political activities of employees whose principal employment activities are funded in whole or in part with Federal funds.

10. Will comply, if applicable, with flood insurance purchase requirements of Section 102(a) of the Flood Disaster Protection Act of 1973 (P.L. 93-234) which requires recipients in a special flood hazard area to participate in the program and to purchase flood insurance if the total cost of insurable construction and acquisition is $10,000 or more.

11. Will comply with environmental standards which may be prescribed pursuant to the following: (a) institution of environmental quality control measures under the National Environmental Policy Act of 1969 (P.L. 91-190) and Executive Order (EO) 11514; (b) notification of violating facilities pursuant to EO 11738; (c) protection of wetland pursuant to EO 11990; (d) evaluation of flood hazards in floodplains in accordance with EO 11988; (e) assurance of project consistency with the approved State management program developed under the Costal Zone Management Act of 1972 (16 U.S.C. §§1451 et seq.); (f) conformity of Federal actions to
State (Clear Air) Implementation Plans under Section 176(c) of the Clear Air Act of 1955, as amended (42 U.S.C. §§7401 et seq.); (g) protection of underground sources of drinking water under the Safe Drinking Water Act of 1974, as amended, (P.L. 93-523); and (h) protection of endangered species under the Endangered Species Act of 1973, as amended, (P.L. 93-205).

14. Will comply with P.L. 93-348 regarding the protection of human subjects involved in research, development, and related activities supported by this award of assistance.

15. Will comply with the Laboratory Animal Welfare Act of 1966 (P.L. 89-544, as amended, 7 U.S.C. §§2131 et seq.) pertaining to the care, handling, and treatment of warm blooded animals held for research, teaching, or other activities supported by this award of assistance.

16. Will comply with the Lead-Based Paint Poisoning Prevention Act (42 U.S.C. §§4801 et seq.) which prohibits the use of lead based paint in construction or rehabilitation of residence structures.

17. Will cause to be performed the required financial and compliance audits in accordance with the Single Audit Act of 1984.

18. Will comply with all applicable requirements of all other Federal laws, executive orders, regulations and policies governing this program.

19. Will comply with the requirements of Section 106(g) of the Trafficking Victims Protection Act (TVPA) of 2000, as amended (22 U.S.C. 7104) which prohibits grant award recipients or a sub-recipient from (1) Engaging in severe forms of trafficking in persons during the period of time that the award is in effect (2) Procuring a commercial sex act during the period of time that the award is in effect or (3) Using forced labor in the performance of the award or subawards under the award.
LIST of CERTIFICATIONS

1. Certification Regarding Debarment and Suspension

The undersigned (authorized official signing for the applicant organization) certifies to the best of his or her knowledge and belief, that the applicant, defined as the primary participant in accordance with 2 CFR part 180, and its principals:

a. Agrees to comply with 2 CFR Part 180, Subpart C by administering each lower tier subaward or contract that exceeds $25,000 as a “covered transaction” and verify each lower tier participant of a “covered transaction” under the award is not presently debarred or otherwise disqualified from participation in this federally assisted project by:
   a. Checking the Exclusion Extract located on the System for Award Management (SAM) at http://sam.gov
   b. Collecting a certification statement similar to paragraph (a)
   c. Inserting a clause or condition in the covered transaction with the lower tier contract

2. Certification Regarding Drug-Free Workplace Requirements

The undersigned (authorized official signing for the applicant organization) certifies that the applicant will, or will continue to, provide a drug-free work-place in accordance with 2 CFR Part 182 by:

a. Publishing a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the grantee's work-place and specifying the actions that will be taken against employees for violation of such prohibition;

b. Establishing an ongoing drug-free awareness program to inform employees about—
   1. The dangers of drug abuse in the workplace;
   2. The grantee's policy of maintaining a drug-free workplace;
   3. Any available drug counseling, rehabilitation, and employee assistance programs; and
   4. The penalties that may be imposed upon employees for drug abuse violations occurring in the workplace;

c. Making it a requirement that each employee to be engaged in the performance of the grant be given a copy of the statement required by paragraph (a) above;

d. Notifying the employee in the statement required by paragraph (a), above, that, as a condition of employment under the grant, the employee will—
   1. Abide by the terms of the statement; and
   2. Notify the employer in writing of his or her conviction for a violation of a criminal drug statute occurring in the workplace no later than five calendar days after such conviction;

e. Notifying the agency in writing within ten calendar days after receiving notice under paragraph (d)(2) from an employee or otherwise receiving actual notice of such conviction. Employers of convicted employees must provide notice, including position title, to every grant officer or other designee on whose grant activity the convicted employee was working, unless the Federal agency has designated a central point for the receipt of such notices. Notice shall include the identification number(s) of each affected grant;

f. Taking one of the following actions, within 30 calendar days of receiving notice under paragraph (d)(2), with respect to any employee who is so convicted?
   1. Taking appropriate personnel action against such an employee, up to and including termination, consistent with the requirements of the Rehabilitation Act of 1973, as amended; or
   2. Requiring such employee to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a Federal, State, or local health, law enforcement, or other appropriate agency;

g. Making a good faith effort to continue to maintain a drug-free workplace through implementation of paragraphs (a), (b), (c), (d), (e), and (f).

3. Certifications Regarding Lobbying

Per 45 CFR §75.215, Recipients are subject to the restrictions on lobbying as set forth in 45 CFR part 93. Title 31, United States Code, Section 1352, entitled “Limitation on use of appropriated funds to influence certain Federal contracting and financial transactions,”
generally prohibits recipients of Federal grants and cooperative agreements from using Federal (appropriated) funds for lobbying the Executive or Legislative Branches of the Federal Government in connection with a SPECIFIC grant or cooperative agreement. Section 1352 also requires that each person who requests or receives a Federal grant or cooperative agreement must disclose lobbying undertaken with non-Federal (non- appropriated) funds. These requirements apply to grants and cooperative agreements EXCEEDING $100,000 in total costs.

The undersigned (authorized official signing for the applicant organization) certifies, to the best of his or her knowledge and belief, that

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

2. If any funds other than Federally appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure of Lobbying Activities," in accordance with its instructions. (If needed, Standard Form-LLL, "Disclosure of Lobbying Activities," its instructions, and continuation sheet are included at the end of this application form.)

3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

4. Certification Regarding Program Fraud Civil Remedies Act (PFCRA) (31 U.S.C § 3801- 3812)

The undersigned (authorized official signing for the applicant organization) certifies that the statements herein are true, complete, and accurate to the best of his or her knowledge, and that he or she is aware that any false, fictitious, or fraudulent statements or claims may subject him or her to criminal, civil, or administrative penalties. The undersigned agrees that the applicant organization will comply with the Public Health Service terms and conditions of award if a grant is awarded as a result of this application.

5. Certification Regarding Environmental Tobacco Smoke

Public Law 103-227, also known as the Pro-Children Act of 1994 (Act), requires that smoking not be permitted in any portion of any indoor facility owned or leased or contracted for by an entity and used routinely or regularly for the provision of health, daycare, early childhood development services, education or library services to children under the age of 18, if the services are funded by Federal programs either directly or through State or local governments, by Federal grant, contract, loan, or loan guarantee. The law also applies to children's services that are provided in indoor facilities that are constructed, operated, or maintained with such Federal funds. The law does not apply to children's services provided in private residence, portions of facilities used for inpatient drug or alcohol treatment, service providers whose sole source of applicable Federal funds is Medicare or Medicaid, or facilities where WIC coupons are redeemed.

Failure to comply with the provisions of the law may result in the imposition of a civil monetary penalty of up to $1,000 for each violation and/or the imposition of an administrative compliance order on the responsible entity.

By signing the certification, the undersigned certifies that the applicant organization will comply with the requirements of the Act and will not allow smoking within any portion of any indoor facility used for the provision of services for children as defined by the Act.

The applicant organization agrees that it will require that the language of this certification be included in any subawards which contain provisions for children's services and that all subrecipients shall certify accordingly.
The Public Health Services strongly encourages all grant recipients to provide a smoke-free workplace and promote the non-use of tobacco products. This is consistent with the PHS mission to protect and advance the physical and mental health of the American people.

**HHS Assurances of Compliance (HHS 690)**

The Applicant provides this assurance in consideration of and for the purpose of obtaining Federal grants, loans, contracts, property, discounts or other Federal financial assistance from the U.S. Department of Health and Human Services.

**THE APPLICANT HEREBY AGREES THAT IT WILL COMPLY WITH:**

1. Title VI of the Civil Rights Act of 1964 (Pub. L. 88-352), as amended, and all requirements imposed by or pursuant to the Regulation of the Department of Health and Human Services (45 C.F.R. Part 80), to the end that, in accordance with Title VI of that Act and the Regulation, no person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity for which the Applicant receives Federal financial assistance from the Department.

2. Section 504 of the Rehabilitation Act of 1973 (Pub. L. 93-112), as amended, and all requirements imposed by or pursuant to the Regulation of the Department of Health and Human Services (45 C.F.R. Part 84), to the end that, in accordance with Section 504 of that Act and the Regulation, no otherwise qualified individual with a disability in the United States shall, solely by reason of her or his disability, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity for which the Applicant receives Federal financial assistance from the Department.

3. Title IX of the Education Amendments of 1972 (Pub. L. 92-318), as amended, and all requirements imposed by or pursuant to the Regulation of the Department of Health and Human Services (45 C.F.R. Part 86), to the end that, in accordance with Title IX and the Regulation, no person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any education program or activity for which the Applicant receives Federal financial assistance from the Department.

4. The Age Discrimination Act of 1975 (Pub. L. 94-135), as amended, and all requirements imposed by or pursuant to the Regulation of the Department of Health and Human Services (45 C.F.R. Part 91), to the end that, in accordance with the Act and the Regulation, no person in the United States shall, on the basis of age, be denied the benefits of, be excluded from participation in, or be subjected to discrimination under any program or activity for which the Applicant receives Federal financial assistance from the Department.

5. Section 1557 of the Affordable Care Act (Pub. L. 111-148), as amended, and all requirements imposed by or pursuant to the Regulation of the Department of Health and Human Services (45 CFR Part 92), to the end that, in accordance with Section 1557 and the Regulation, no person in the United States shall, on the ground of race, color, national origin, sex, age, or disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any health program or activity for which the Applicant receives Federal financial assistance from the Department.

The Applicant agrees that compliance with this assurance constitutes a condition of continued receipt of Federal financial assistance, and that it is binding upon the Applicant, its successors, transferees and assignees for the period during which such assistance is provided. If any real property or structure thereon is provided or improved with the aid of Federal financial assistance extended to the Applicant by the Department, this assurance shall obligate the Applicant, or in the case of any transfer of such property, any transferee, for the period during which the real property or structure is used for a purpose for which the Federal financial assistance is extended or for another purpose involving the provision of similar services or benefits. If any personal property is so provided, this assurance shall obligate the Applicant for the period during which it retains ownership or possession of the property. The Applicant further recognizes and agrees that the United States shall have the right to seek judicial enforcement of this assurance.

The grantee, as the awardee organization, is legally and financially responsible for all aspects of this award including funds provided to sub-recipients in accordance with 45 CFR §§ 75.351-75.352, Subrecipient monitoring and management.
I hereby certify that the state or territory will comply with Title XIX, Part B, Subpart II and Subpart III of the Public Health Service (PHS) Act, as amended, and summarized above, except for those sections in the PHS Act that do not apply or for which a waiver has been granted or may be granted by the Secretary for the period covered by this agreement.

I also certify that the state or territory will comply with the Assurances Non-Construction Programs and Certifications summarized above.

Ms. Virginia Simmons, Grants Management Officer
Office of Financial Resources, Division of Grants Management
Substance Abuse and Mental Health Services Administration
1 Choke Cherry Road, Room 7-1109
Rockville, Maryland 20850

Dear Ms. Simmons:

As the Governor of the State of North Carolina, for the duration of my tenure, I delegate authority to the current Secretary of the North Carolina Department of Health and Human Services, or anyone officially acting in this role in the instance of a vacancy, as the state mental health authority (SMHA), for all transactions required to administer the Substance Abuse and Mental Health Services Administration's (SAMHSA) Community Mental Health Services Block Grant (MHBG).

Very truly yours,

[Signature]
Roy Cooper

Memorandum

From: Mandy Cohen, MD, MPH
Secretary

Re: Delegation of Authority

As of this date, I am delegating my signature authority to Susan Perry-Manning, Principal Deputy Secretary; Rob Kindsvatter, Chief Financial Officer; Dave Richard, Deputy Secretary, NC Medicaid; Sam Gibbs, Deputy Secretary for Technology and Operations; Ben Money, Deputy Secretary for Health Services; Tara Myers, Deputy Secretary for Human Services; and Kody Kinsley, Deputy Secretary for Behavioral Health & Intellectual and Development Disabilities for the Department of Health and Human Services. During such times as I designate, Ms. Perry-Manning, Mr. Kindsvatter, Mr. Richard, Mr. Gibbs, Mr. Money, Ms. Myers or Mr. Kinsley may have the authority to sign official Departmental documents for which my signature is required.

Also, I give delegating authority to Mr. Mark Benton, Assistant Secretary for Public Health, to sign matters related to the Division of Public Health, such as grant activity, its sources/amounts, where it may align with our department initiatives, etc.

Any such documents will have the same force and authority as if they had been signed by me.

Such authority continues until revoked by me, either orally or in writing.

**Footnotes:**
Planning Steps

Step 1: Assess the strengths and organizational capacity of the service system to address the specific populations.

Narrative Question:
Provide an overview of the state’s M/SUD prevention, early identification, treatment, and recovery support systems, including the statutory criteria that must be addressed in the state’s Application. Describe how the public M/SUD system is currently organized at the state and local levels, differentiating between child and adult systems. This description should include a discussion of the roles of the SMHA, the SSA, and other state agencies with respect to the delivery of M/SUD services. States should also include a description of regional, county, tribal, and local entities that provide M/SUD services or contribute resources that assist in providing the services. The description should also include how these systems address the needs of diverse racial, ethnic, and sexual and gender minorities, as well as American Indian/Alaskan Native populations in the states.

OMB No. 0930-0168 Approved: 04/19/2019 Expires: 04/30/2022

Footnotes:
ADULT MENTAL HEALTH

System Overview

North Carolina is actively working on developing an adult mental health service array that is able to meet individuals where they are at in the community of their choice. Our focus in the coming years will be on ensuring that services of varying intensity are available and accessible, that they pull from evidence-based practices when available, and that we make frequent and appropriate use of peer led interventions to infuse our service array with recovery and wellness practices.

Evidence Based Practices (EBPs)

- **Assertive Community Treatment (ACT)**
  NC has invested a significant amount of funding in improving the quality of ACT services provided across the state and ensuring that ACT staff have access to training that supports their implementation of ACT. NC understands that ACT is an invaluable tool in supporting adults with severe and persistent mental illness live in and be part of community. We will continue to conduct fidelity evaluations using the Tool for Measurement of ACT (TMACT) and identifying areas of technical assistance to focus on across the state.

- **Individual Placement and Support – Supported Employment (IPS-SE)**
  IPS-SE has been part of the NC AMH Service Array since 2013. This service and practice are still very new to the State, and as such, NC has invested a significant amount of funding in ensuring that IPS-SE teams have access to training and technical assistance to support good implementation. NC has also written into the ACT policy/service definition that all teams will have a vocational specialist, and the vocational specialist will be trained in and provide services in a way that aligns with the IPS-SE EBP. NC will continue to focus on ensuring IPS-SE is accessible across the state, and that new and existing teams have access to training and technical assistance. We are actively working on the pilot implementation of an outcome and performance-based payment system that will sequence funding with NC DVR milestone reimbursement system. We strongly feel that this payment system will support providers in being able to focus more on high quality implementation of IPS-SE, and less on excessive paperwork required for authorization.

- **Critical Time Intervention (CTI)**
  Critical Time Intervention was added to the State funded service array in 2016 to support adults with severe and persistent mental illness through critical life transitions. DMHDDSAS staff have received training from the model developers to help shape the training and technical assistance process that new providers receive. Two teams are receiving funding through the Transitions to Community Living Initiative to focus on supporting individuals that are either leaving adult care homes or state psychiatric hospitals transition back into the community. We feel that with continued development and support for implementation, CTI can enhance our current State funded service array by adding an evidence-based practice that specifically focuses on supporting individuals with SMI/SPMI through critical life transitions.

- **Integrated Dual Disorders Treatment (IDDT): Integrated Care – Substance Use and Mental Illness**
  Integrated Dual Disorders Treatment is not a stand-alone service in North Carolina. All ACT teams are required to have a Substance Use Specialist who has been trained in and practices from an IDDT
approach, and further influences the practice of the whole team. IPS-SE practices principles also align with IDDT, specifically zero exclusion and rapid job search. DMHDDSAS is supporting improvement integration and implementation of IDDT practices by developing and facilitating the Mental Health/Substance Use 101 training (for free, open to all providers), coordinating technical assistance with Ric Kruszynski from Case Western Reserve, and including the provision of introductory motivational interviewing training through our contract with the Institute for Best Practices. DMHDDSAS is currently a certified ACEP contact hour provider, which allows us to offer free contact hours for trainings and encourage licensed clinicians to attend. We are hoping to explore expanding the dual licensure program to LPCs. This program is currently only available to individuals pursuing their MSW and allows them to have met most of the criteria to become both an LCAS and LCSW. By expanding this opportunity to LPCs, we would increase the number of licensed staff in NC that are trained and qualified to work with individuals dealing with co-occurring mental health and substance use issues.

- **Peer Services**

DMHDDSAS is working to develop a State wide, State funded Peer Support service definition. We are also in the process of working with Medicaid to determine what steps can be made to add Peer Supports to the State Plan Amendment, which also would increase access to this valuable service across the state. We are extremely excited to be funding a pilot Peer Respite Program with MHBG funds. NC has been fortunate to collaborate with the Georgia Mental Health Consumer Network to find out more about the implementation and benefits of having Peer Operated Respites in our state. The pilot site, located in Asheville, will be the first of its type in NC. DMHDDSAS is working closely with Vaya (managing LME-MCO) and Sunrise Community for Recovery and Wellness (provider) to track implementation progress, costs, and outcomes and determine what is needed to add additional sites across the state. We continue to consult with our colleagues in Georgia for tips and feedback. The goal is to have a State funded definition active by August 2019. A Medicaid definition before the end of the State fiscal year.

- **Consumer, Family and Peer Education and Supports**

DMHDDSAS works with state and community consumer, young adult, and family support and advocacy organizations. These organizations are implementing best practices that are evidence informed and peer led. Among those partnerships, NAMI NC implements some of these across the state through their affiliates that often increase access and facilitate and sustain engagement in effective services and supports that promote and sustain recovery. Some of these include NAMI Family to Family, NAMI Homefront with military, Veterans, and families, and In Our Own Voice among others. Such partnerships extend supports, further access and sustained engagement and self-advocacy.

**Transitions to Community Living Initiative (TCLI)**

TCLI has provided the framework we are actively applying to our State funded Adult Mental Health Service Array. Our team routinely looks back not just to TCLI, but also to the Olmstead Act and the Americans with Disabilities Act to ensure what we plan and do aligns with our community integration mandate, viz., community based services and supports are available and vary in clinical intensity, services are infused with recovery focused practices that pull from psychiatric rehabilitation and other evidence based practices, and service providers are actively supporting individuals identify, engage in, and become active members of their community.
Mental Health Recovery

The Adult MH Team is identifying ways and practices that can bring recovery into the AMH service array. Some of our plans include: increasing DMHDDSAS staff knowledge on psychiatric rehabilitation so this practice can then influence our service delivery, identifying emerging best practices that focus on community involvement and integration, researching service models not yet used in NC for pilot consideration. Other division staff are working to develop and evolve a grass-roots mental health recovery movement statewide, grounded in both a statewide organization as well as several related local collaboratives. Community Inclusion is currently a large effort being supported by DMH/DD/SAS.

Older Adults

The Geriatric / Adult Specialty Team (GAST) program provides training to staff working with older adults living in the community. GAST began in 2003, focusing on long-term care facilities in response to the closing of NC’s state psychiatric hospitals’ gero-psych units. Over the years the program’s mission has expanded to include caretaker training in such community settings as senior centers, day programs and psychosocial rehabilitation centers, and in conjunction with social services, law enforcement and first responders. Training is designed to help geriatric caretakers understand how mental illness, especially depression and anxiety, manifests in older adults. It especially focuses on how to recognize suicide thoughts, and substance use / misuse. GAST trainings and brochures routinely review how older adults can access mental health services through NC’s LME-MCO network.

Integrated Care

Behavioral Health and Primary Care

Integrated care became a focus of the state in 2006 with the establishment of the North Carolina Integrated, Collaborative, Accessible, Respectful, and Evidence-based (ICARE Partnership) that promoted a co-location of behavioral health and primary health care practitioners in one setting. Then Governor Beverly Perdue identified it as one of the priorities of her administration in 2009.

The NC Department of Health and Human Services has ongoing integrated care initiatives in several divisions, most promiently in the Office of Rural Health, Public Health, and the Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMHDDSAS). Three of the DMHDDSAS SAMHSA-funded projects – Screening, Brief Intervention, and Referral to Treatment (SBIRT), Medication-Assisted Treatment for Prescription Drug and Opioid Abuse (MAT-PDOA), and the Certified Behavioral Health Center (CCBHC) Planning Grant focused on the integration of primary and behavioral health care needs for adults with mental health, substance use, and co-occurring disorders.
Substance Use and Mental Health

Enhanced Services

- ACT – Substance Use Specialist, whole team practice of IDDT, monitoring of provision of co-occurring disorders treatment, Motivational Interviewing and interventions in line with stages of change
- IPS practice principles align with best practices for SU, specifically zero exclusion and rapid job search
- Outpatient services
- Comprehensive Clinical Assessments are required to assess for substance use, and determine a diagnosis if clinically indicated
- Fidelity monitoring processes support IDDT practices

Training

- UNC Institute for Best Practices contract – how it supports integration
- MINT trainer, Stacy Smith, providing free Intro to MI training with plans to expand training for more advanced MI
- Critical Time Intervention
- MH/SU 101 offered free to all service providers and community members
- Future endeavors: Co-Occurring Disorders 101, making materials from Case Western available online for providers
- DMHDDSAS is a certified ACEP contact hour provider, this can increase attendance at trainings for licensed staff as we are able to provide free contact hours for in person trainings
- Several universities in NC have programs in their Social Work departments where students can elect to take courses in substance use while completing their social work courses and have met the educational requirements for their LCAS when they graduate. These programs increase the number of dually licensed master’s level clinicians in NC.

Employment

- NC implemented IPS-SE in 2013, we now have roughly 38 teams across NC, with 13 scoring a 100 or higher on their most recent fidelity evaluation
- Per the current State funded IPS-SE service definition, an IPS-SE team is required to have on staff
  - An IPS-SE Team Lead (Qualified Professional)
  - An Employment Support Professional (Qualified Professional, Associate Professional or Certified Employment Support Specialist)
  - An Employment Peer Mentor (Certified Peer Support Specialist)
- Employment Peer Mentors are required to complete the Employment Peer Mentoring training in addition to trainings required to become a Certified Peer Support Specialist
- In FY18-19, $297,864 in MHBG funds was allocated to the Institute for Best Practices at UNC-Chapel Hill’s Center for Excellence in Community Mental Health. Through these funds and this contract, DMHDDSAS is able to increase its resources around training, technical assistance, and fidelity evaluations. The Institute employs 6 staff that are regionally located, that are IPS-SE Consultants and Trainers. The Institute also facilitates the IPS-SE 101 training, which is required for all IPS-SE staff per
the State funded service definition. They also employ 2 staff that focus on ACT, motivational interviewing, co-occurring disorders and psychiatric rehabilitation training and technical assistance.

- DMHDDSAS has been collecting outcome data directly from IPS providers and have found that our IPS employment rates match the national trends reported by Westat

### Housing

#### Homelessness

The PATH Program is located in Charlotte, Asheville, Greensboro and Raleigh. The target population is those people with serious mental illness who are living in the street. Since 2005, PATH has used a team approach with a Certified Peer Specialist. The team also includes a QMHP and a Benefit Specialist implementing SOAR. People enrolled in PATH receive assistance in accessing mental health services through the LME-MCO. Teams receive the following training yearly: Trauma Informed Care, Person centered Thinking, and Recovery.

#### NC Oxford Houses (Funding Source: SAPTBG, CURES, & STATE)

- The partnership between NC DHHS-Division of MH/DD/SAS and Oxford House, Inc. began in 1991, and resulted in the development of the Revolving Loan Fund and the opening of the first two NC Oxford Houses (Durham & Asheville) for individuals in recovery.
- For FY18-19, the Division (DMH/DD/SAS) has contracted with Oxford House, Inc. using Federal (SAPTBG, Cures Act/Opioid State Targeted Response & State Opioid Response grant) and State (State-wide Health and Human Service Initiative) funds to add to the number of Oxford House recovery beds, mentor and to provide peer mentoring to the over 1,500 individuals living in a NC Oxford House.
- In addition, as part of NC's response to the opioid crisis, the Division continued funding to maintain for a second year, two new positions:
  - Re-Entry Coordinator Position – Transition and mentor individuals from incarceration, to re-enter the community into NC Oxford Houses.
  - Training and Education Coordinator Position – Conduct training sessions to targeted house members and NC Oxford House contract staff on the risk of opioid misuse, appropriate use of an FDA approved product for emergency care and other pertinent areas of need.

#### Some Facts about NC Oxford Houses include:

- Oxford Houses are democratically run recovery houses with 6 to 10 residents
- There are over 230 NC Oxford Houses, which equates to over 2000 recovery beds
- They serve men, women and special populations i.e., veterans, persons re-entering from CJ system, students in recovery enrolled at targeted universities, women with children and men with children
- Residents have voting rights, hold offices and are expected to maintain their recovery
- Residents that are dispelled for not maintaining their recovery, can return to reapply to any Oxford House
- Residents share household expenses, i.e. rent and utilities
- Residents share household upkeep responsibilities

5
• Majority of the residents are employed and/or enrolled in school
• Many of the residents are active in their communities

**LME-MCO Housing & Transition to Community Living Initiative (TCLI) Activities**

**Collaboration between NC Oxford House Outreach Staff & LME-MCO Housing Staff (Funding Source: SAPTBG, State and MHBG)**

As part of the Division’s efforts to increase awareness and usage of recovery beds for the Transition to Community Living Initiative, as well as to foster greater collaboration between our varied housing partners, NC Oxford House outreach staff were asked to notify LME-MCO housing staff of their plans to open new NC Oxford Houses. NC Oxford Houses has played a major role in providing the much-needed housing for persons in recovery in need of stable, safe, decent and affordable housing coupled with peer support.

**LME-MCO Housing Staff Collaborating with Local and State Partners to Support DHHS-DMH/DD/SAS Housing Goals (Funding Source: MHBG)**

The DHHS-DMH/DD/SAS (the Division) has had a long history of focusing on developing new housing opportunities and increasing access to existing housing. In 1998, the first dedicated housing staff were initially funded by the Division and housed within some of the local “Area Programs” across our state. In 2007, the local housing staff played a major role with supporting the expansion of the Targeting Program. The Targeting Program (TP) was developed out of a partnership between the DHHS and the NC Housing Finance Agency, working in collaboration with key property owners, managers and service providers in which these TP rental units were:

- Designated for persons with a disability living with extremely low income. They are 10% (with some up to 20%) of units set-aside from rental apartments developed with Low Income Housing Tax Credits (all Housing Credit Properties are required to set aside at least 10%).
- To link individuals with disabilities who have extremely low income with permanent housing that is decent and affordable coupled with an array of available supports and services.
- Highly dependent on LME-MCOs to manage the adult mental health services array, to ensure that there was an adequate array of supports and services available to support persons living in TP units.
- Subsidized with Key Rental Assistance (state funds) that made these units affordable to persons living with disability income.

In 2008, the largest expansion of funding to support previously unfunded housing positions was allocated to ensure that all the Local Management Entities (LMEs) had at least one designated housing expert. Currently, there are no less than two dedicated housing coordination staff (housing experts) located at each of the (seven) LME-MCOs. The FY18 Contract between the Division and LME-MCOs contains some key designated housing activities which includes, but not limited to:

- Having a designated single point of contact (Housing Coordinator) at the LME-MCO shall be identified to coordinate all housing efforts and work closely with the other TCLI team members.
- Developing of housing opportunities for consumers via collaboration and partnerships
- Participating in quarterly meetings
- Collaborating with stakeholders to provide education and outreach to internal and external stakeholders, advocates, consumers, families and service providers in identifying, accessing and maintaining affordable housing, regarding the N.C. Landlord-Tenant and Fair Housing Laws, and negotiating reasonable accommodations.
bullet Developing positive working relationships with local public housing authorities (PHAs) and HUD Section 8/Housing Choice Voucher administering agencies to include PHAs in CoC and to improve access and increase the supply of these resources.

bullet Arranging site visits of newly opened NC Oxford Hoses, as made known within two months.

Transitions to Community Living Initiative (TCLI)

Integrated Community Living

LME/MCO must perform Diversion, In-Reach, and Transition activities for the population specified in the August 2012 Settlement Agreement between the State of North Carolina and the U.S. Department of Justice and according to the requirements of this section.

LME/MCO shall make all services in the TCLI benefit package included in the DMH/DD/SAS approved adult services array, including Peer Support Services, IPS-SE, and ACT, available to TCLI participants.

In addition to the other general provisions of this Contract related to special populations, the following activities are required for individuals in the TCLI Benefit Plan, as specified by DHHS, and shall follow the requirements outlined in the DOJ Settlement Agreement and subsequent DHHS-approved, related plans.

Transition Planning

Transition Planning refers to the process of developing a person-centered transition plan to assist an individual in transitioning from an Adult Care Home or State hospital to a more integrated community living arrangement. This plan shall be used by the treatment provider to develop the person-centered recovery treatment plan. LME/MCOs shall ensure that all transition planning is person-centered and follows the guidelines set forth by DHHS in support of the DOJ Settlement Agreement.

Subject to available funding allocated to the LME/MCO for this purpose, LME/MCO shall hire or contract for in-reach and transition staff who meet one of the following qualifications:

• Care Coordinator

• Certified Peer Support Specialist (must be Certified Peer Support Specialists within six (6) months of being hired).

• Meet at least Qualified Professional (Mental Health/Substance Abuse) minimums for education and training.

• Transition staff roles/expectations:

• Assure that discharge/transition planning occurs timely and effectively

• Ensure the development of an effective, person-centered transition plan for the TCLI Population that includes all required elements for a successful transition.

Diversion

The LME/MCO will assign staff or contract with an adequate number of staff to account for the number of individuals covered under the population definitions/criteria to carry out the requirements of the DOJ Settlement related to diverting individuals from admission to licensed Adult Care Homes. The LME/MCO will produce for the DMH/DD/SAS their criteria and analysis that demonstrates adequate staffing levels.

The LME/MCO will:

• Ensure that all individuals in the TCLI priority population process of diversion have the elements of community integration plans a Community Integration Plan (CIP) that meets requirements standards set by DHHS. LME/MCOs shall ensure that all CIPs meet DHHS quality standards and pass DHHS quality reviews.
• Review the CIPs to ensure they are completed with clear documentation that informed choice drove the individual's decision and the degree to which that decision has been implemented.
• Review the PASRR/PASD information to assess if individuals are eligible for Medicaid services, or State-funded services as available, are offered to individuals whether moving to the community or to an Adult Care Home.
• Connect individuals who have had CIP with services and supports that they are eligible for and determine if person is housing slot eligible.
• Assure that individuals who choose to be admitted to an ACH are referred for In-Reach, per the In-Reach requirements of the DOJ Settlement Agreement.

In-Reach
The LME/MCO must be able to demonstrate the sufficiency of staffing levels to perform In-Reach activities for the TCLI Population upon request by DMH/DD/SAS. In-Reach activities must include at a minimum the following and will be documented using the DHHS designed Transition to Community Living Database.
• Explaining fully the benefits and financial aspects of clinically-appropriate community-based integrated settings, including supported housing;
• Facilitating and accompanying individuals on visits to supported housing options/locations;
• Assessing Adult Care Homes residents’ interest in supported housing;
• Exploring and addressing the concerns of any of Adult Care Home residents who decline the opportunity to move to supported housing or who are ambivalent about moving to supported housing despite being qualified for such housing;
• Ensuring tenancy support transitions to housing are coordinated;
• Explore the individual’s interest in finding employment, provide basic benefits counseling/information, and/or continuing their education;
• Reports made by LME/MCO staff or providers to the State, in accordance with State law, regarding concerns about rights of individuals, suspected potential abuse, neglect, or exploitation that arise during the in-reach and transition process; and
• Completing the DHHS In-Reach Tool for each individual.

Tenancy Support Services
Tenancy support services may be provided through ACT providers or through separate tenancy support providers. For those eligible for the TCLI benefit package, tenancy support services should be available at least twice per month for all individuals approved for a TCLI housing slot and not receiving tenancy support through ACT services.

Tenancy support services is also available to those individuals that do not qualify for ACT through the State funded service Transition Management Services.

The State is also in the process of updated the Community Support Team service definition for both Medicaid and State funds to include Tenancy Support Services. The revised CST definition will go live on 10/1/19.

TCLI Supportive Housing Efforts
The LME/MCO shall accomplish the milestones required under the Transitions to Community Living Initiative (TCLI) related to supportive housing for individuals in the TCLI Benefit Plan. A designated single point of contact (Housing Coordinator) at the LME/MCO shall be identified to coordinate all housing efforts and work closely with other TCLI team members. The LME/MCO shall fulfill the following general requirements:
• Educate and be a resource of support to TCLI consumers, families and service providers in identifying, accessing and maintaining affordable housing,
• Maintain minimum staffing levels through contracts or FTEs to ensure coordination of housing activities
• Ensure LME/MCO-specific housing goals as established annually by the DHHS are met. The Department and the LME/MCO will determine the number of slots it will fill for each year of the settlement agreement in accordance with NCGS §122C-20.10.

TCLI Housing

**Development of Housing Opportunities for Consumers**
The LME/MCO shall work in collaboration with other public agencies and DHHS’ housing staff to increase the expansion of supported housing opportunities available to persons with mental illness, intellectual/developmental disabilities, and/or substance abuse disorders.

**Quarterly Meetings**
LME/MCO shall send a representative to the four quarterly meetings of Housing Specialists that are offered by the DMH/DD/SAS housing staff.

**Education and Outreach**
LME/MCO shall collaborate with appropriate stakeholders to provide education and outreach to internal and external stakeholders, advocates, consumers, families and service providers in identifying, accessing and maintaining affordable housing, regarding the N.C. Landlord-Tenant and Fair Housing laws, and on negotiating reasonable accommodations:

• Collaborate with the Transition Team, DHHS professionals and their vendors along with other stakeholders to identify and secure housing.
• Make available in multiple venues where Service Providers and other stakeholders convene, information to identify housing resources, expand knowledge of eligibility requirements for difference housing programs, how to access affordable housing resources, information to increase awareness of the Fair Housing Act, Americans with Disabilities Act, Landlord and Tenant Rights, barriers associated with Not In My Back Yard (NIMBY), and information to reduce stigma associated with mental illness, intellectual and developmental disabilities and substance use disorders.
• Attend at least one LME/MCO sponsored Provider’s meeting within a year
• Offer to provide technical support to Service Providers and Consumers on accessing housing, and the process of making Reasonable Accommodation request.
• Available when needed to assure consumers are linked back appropriately to Service System when housing is at risk of becoming destabilized.

**Collaborative Relationships**
LME/MCO shall use best efforts to develop a positive working relationship with local public housing authorities (PHA) and HUD Section 8/Housing Choice Voucher administrating agencies to improve access and increase the supply of these resources:

• Regularly, strategically seek out means of establishing / nurturing partnerships with PHAs.
• Gain knowledge of and seek out ways to support PHAs’ supportive housing plan.
• Stay abreast of, and plan to attend at least one public meeting annually at a PHA in the catchment area.
• Work toward the ability to include PHAs in CoC, 10-Year Plan, and other local housing meetings.
• Work toward the ability to work collaboratively with PHA leadership to coordinate housing efforts, to educate on CoC HUD funded programs, discuss local Fair Housing issues, rental trends, etc.

LME/MCO shall also use best efforts to establish partnerships with other local, affordable housing and MH/DD/SAS advocates and stakeholders to improve access, increase the supply of resources for MH/DD/SAS consumers, and identify and secure housing and support service funding opportunities from private, city/county, state, and federal sources:
• Meet with property managers and provide training opportunity for Landlords on supportive housing.
• Maintain regular communication with area housing agencies, and supportive housing advocates
• Gain knowledge of and strive to work collaboratively with local non-profits, developers, MH/DD/SAS stakeholders including NC Oxford House to encourage and support development of new supportive housing.
• Arrange a site visit of newly opened Oxford Houses as made known within two months.
• Gain knowledge of and strive to work collaboratively with local MH/DD/SAS advocates and stakeholders to encourage and support development of new supportive housing (participating jurisdiction, affordable housing providers, local Coalition, Center for Independent Living, etc.).
• Work with existing partnerships to establish additional resources (i.e. additional vouchers, housing opportunities, and programs).
• Identify potential housing development partners (i.e. Dept. of Social Services, city officials, faith community, public housing agencies, jail, prison, psychiatric hospitals, mental health, substance abuse, Intellectual Developmental Disability professionals and advocates).
• Strive to enhance working knowledge of funding sources and how to successfully secure and utilize to increase the supply of permanent supportive housing.
• Offer to provide technical assistance and support to identified agencies applying for state and federal funding opportunities (i.e. justification of need, providing data and information as it relates to available support services) as resources allow.

Performance Expectations

TCLI Special Healthcare Population

Special reporting is required to measure progress in the Transitions to Community Living Initiative. The LME/MCO must track all services received by individuals that fall under any of these characteristics of the TCLI benefit plan population:
• Individuals with SMI who reside in an adult care home determined by the State to be an IMD;
• Individuals with SPMI who are residing in ACHs licensed for at least 50 beds and in which 25% or more of the resident population has a mental illness;
• Individuals with SPMI who are residing in ACHs licensed for between 20-49 beds in which 40% or more of the resident population has a mental illness;
• Individuals with SPMI who are or will be discharged from a State Psychiatric Hospital and who are homeless or have unstable housing;
• Individuals diverted from entry into ACHs pursuant to the pre-admission screening and diversion process;
• Individuals provided and referred to supported employment (data must be reviewed and validated by LME/MCO);
• Individuals in the In-Reach process; and
• Individuals in the TCLI Benefit Package.
Additional reporting may be required by the August 2012 USDOJ Settlement Agreement and subsequent monitoring of progress, and these additional reporting requirements will be negotiated between the parties as an amendment to this Contract. Complete data is entered into the TCLI reporting system by the 10th of each month for the previous month’s information.

The LME/MCO must also track and report on services received by the following individuals who may not meet criteria for the TCLI benefit plan population:

1. Individuals not diverted from entry into ACHs and who are determined to be eligible for mental health services

Transitions to Community Living Initiative Measures

TCLI Population Housing Survival
Measure: 12-month (and/or 18- or 24-month) housing survival (percent in housing at xx months; annual measure; report year-to-date values quarterly)
Data Source: NC Housing Finance Agency (NCHFA) Community Living Integration & Verification (CLIVe) database

TCLI Population Exitng Supportive Housing
Measure: Annual percentage exiting supportive housing (annual measure; report year-to-date values quarterly)
Data Source: NCHFA CLIVe database

TCLI Population Employment
Measure: Housed individuals with employment (quarterly measure)
Data Sources: NCHFA CLIVe database; NC-TOPPS

Benchmarks and Penalties

Beginning January 1, 2018, the following measures shall have a performance standard and corresponding penalty for each standard not met. Any month LME/MCO performance is below the performance standard, LME/MCO shall submit to DMH/DD/SAS and implement a corrective action plan (CAP) within 30 days. If the LME/MCO does not meet the performance standard for the next three (3) consecutive months following the implementation of the CAP, the LME/MCO will incur a penalty in the fourth month and each month following when the performance standard is not met. Penalties shall continue until LME/MCO meets the performance standard. LME/MCO shall be subject to a separate penalty for each standard not met.

TCLI: Number of Individuals Transitioned into Supportive Housing
Measure: This measure provides the number and percentage of the LME-MCO’s annual allotted TCLI housing slots for whom eligible individuals transition to supportive housing.
Data Source: Housing Finance Agency (HFA) Community Living Housing Report
Performance Standard: 100% of the annual targets.
Penalty: $50,000
Military and Veterans Programming Initiatives in NC Using MHBG Funds

Founded by clinical Health Professionals in 2006 as the Governor’s Focus Group on Service members Veterans, and their Families, in partnership with the Governor’s Institute on Substance Abuse, it is known today as the GOVERNOR’S WORKING GROUP on Veterans, Service members and their Families (GWG). The GWG has grown to become a nationally recognized forum, which hosts a monthly meeting, newsletter, and website (http://ncgwg.org), as well as a YouTube Channel (https://www.youtube.com/watch?v=p2CwZHxho4&feature=youtu.be). Facebook LIVESTREAM has expanded viewership to a 2019 average of 4,000 per meeting. This real-time referral and collaboration network cuts red tape—linking decision makers, service providers, and military members (current and former) and their families together in a best-practices sharing environment.

Charged with facilitating collaboration and coordination among ALL Federal, State, Local, and Non-Profit partners who work with North Carolina’s nearly 740,000 Veterans and their families, monthly sessions highlight:
- Health and Wellness, including Behavioral Health, especially for those in recovery
- Transitional Services
- Veterans Benefits and Claims
- Community-based Services and Supports
- Housing Resources
- Education and GI Bill
- Job Creation and Workforce Enrichment
- Legal and Financial Services

Functioning collaborations fostered at GWG sessions include:
- NC STRIVE (Student Transition Resources Initiative for Veterans Education)
  4 Regional Higher Education Conferences in 2019
  http://ncgwg.org/nc-strive/
- Operation HOME: Ending Veterans Homelessness Task Force
  http://ncgwg.org/operation-home/
- Women Veterans Summit and Expo
  http://women.nc4vets.com/
- NC Practice Improvement Collaborative (NC PIC) to Reduce Veteran Suicide
  http://ncgwg.org/nc-officials-work-to-end-states-high-veteran-suicide-rate/
  http://ncgwg.org/5-veteran-suicide/

The Governor’s Working Group Leadership:
- Larry Hall, Chairman, Secretary, NC Dept of Military and Veterans Affairs
- Kody Kinsley, Vice-Chair, Assistant Secretary for integrated Behavioral Health, NC Dept of Health and Human Services
- Mark Edmonds, Vice-Chair, COO Workforce Solutions, NC Dept of Commerce
- Mark Bilosz, Vice-Chair, Director, Veterans Benefits Administration, Winston-Salem Regional Office, US Dept of Veterans Affairs
• DeAnn Seekins, Vice-Chair, Network Director (VISN-6), VA Mid-Atlantic Health Care Network, US Dept of Veterans Affairs
• Martin Falls, Vice-Chair, Assistant Secretary for Veterans Affairs, NC Dept of Military and Veterans Affairs

The Steven A. Cohen Military Family Clinic at Cape Fear Valley provides confidential, high-quality behavioral healthcare services and case management resources at low or no-cost and without long wait times to post-9/11 veterans, their families, and the families of Active Duty, National Guard, and Reserves, including spouse or partner, children, parents, siblings, caregivers, and others. Eligibility for services is regardless of discharge status, role while in uniform, or combat experience. No insurance required. MHBG funds help to underwrite services provided to Veterans and their adolescent children suffering from SMI/SPMI.

The Steven A. Cohen Military Family Clinic at Cape Fear Valley is part of Cohen Veterans Network, a not-for-profit philanthropic organization that operates a nationwide network of clinics. Cohen Veterans Network has a mission to remove barriers to care for the military and veteran community by offering the following:

• Low to no-cost services
• Short wait times
• Appointments by self-referral
• Extended hours
• Transportation assistance
• Telehealth services

To learn more, go to www.cohenveteransnetwork.org

NCServes networks:
In North Carolina, where one third of the state’s population is military-connected, significant gaps in coordinated service delivery exist. NCServes provides the coordinated networks, with associated technology (UniteUS), needed to connect Veterans and their Families to the resources they need, while allowing the tracking of system-wide outcomes that support system improvement. Built with private, philanthropic support from national organizations, through the Institute for Veterans and Military Families (IVMF) at Syracuse University, AmericaServes has sponsored the creation of four (4) regional network coordination centers, each housed in an existing community provider, operating in 74 of 100 counties;

• NCServes Metrolina: (https://charlotte.americaserves.org/) Veterans Bridge Home in Charlotte serves 8 North Carolina counties,
• NCServes Western: (https://western.americaserves.org/) Veterans Services of the Carolinas, through the Asheville-Buncombe Community Christian Ministry (ABCCM) coordinates services in 16 Counties,
• NCServes Central: (https://raleigh.americaserves.org/) the USO of North Carolina provides coordinated network management in 21 counties,
• NCServes Coastal: (https://coastal.americaserves.org/) Eastern Carolina Human Services Agency (ECHSA) coordinates care in 20 eastern counties.
Additionally,

These networks have provided a model of coordinated care that has informed the adoption of the NCCARE360, the first statewide coordinated care network to electronically connect those with identified needs to community resources and allow for a feedback loop on the outcome of that connection. Participation and reporting via NCServes is required of all community partners in this section.

NCServes provides a strategic opportunity for North Carolina to continue to improve access across the social determinants of health that contribute to:
1. Reductions of homelessness
2. Improved quality of life
3. Improved health and well-being because of NCServes’ community-level coordinated care model.

**PATH-Veterans:**
Projects for Assistance to Transition from Homelessness (PATH) program expansion uses MHBG funds to identify and assist chronically homeless Veterans, suffering from SMI/SPMI (PTSD, TBI, MST), in 8 counties; (Buncombe, Cumberland, Onslow, Gaston, Cleveland, Mecklenburg, Haywood, New Hanover). This expansion is in direct response to significant pressures put upon existing housing options for all North Carolinians due to recent natural disasters and population growth in urban areas; 2019 Point in Time (PIT) count numbers will indicate an increase in Veterans homelessness in NC, due to these factors. PATH-Veterans leverages existing partnerships to maximize outreach and coordination through the NCServes networks and the Steven A Cohen Clinic for Veterans and Military Families.

**SAMHSA SMVF TAC Community Challenge to Reduce Veterans Suicide:**
Targeted support for the Soldiers, Military Veterans, and Families Technical Assistance Center’s (SMVF TAC) Community Challenge team in Charlotte/Mecklenburg County, NC. This pilot project is in support of the coordination team, who have gathered 150 community partners, to form a coordinated network anchored through Mecklenburg County Veterans Services and Veterans Bridge Home (NCServes Metrolina). This response to a community request is designed to better integrate and coordinate responses, including CIT, Suicide Prevention, Military Cultural Competency and De-escalation trainings throughout the community.

**Deaf Services**

NC DMHDDSAS has been providing specialized services to Deaf, Hard of Hearing and Deaf-Blind individuals since 1992. These services stem from one of the earliest ADA complaints filed in NC, alleging Deaf individuals were not receiving appropriate care in the public mental health system. While the original complaint was resolved long ago, the state continues to show commitment to providing language accessible and culturally competent MH/SUD services to this population.

In SFY17, the state started contracting directly with RHA Behavioral Health to provide MH/SUD services to this population across the state. This direct service contract allows the Division to achieve budget
efficiencies and ensure services are provided evenly across the state. Prior to SFY17, these services were managed and contracted out through the LME-MCOs.

RHA employs 10 full time licensed clinicians (LCSWs, licensed counselors, licensed psychologists), 6 Outreach Consultants (3 are certified Peer Support Specialists), a program director, business manager and a part-time administrative assistant. All staff are sign language fluent as measured by the Sign Language Proficiency Interview (SLPI). About 60% of RHA program staff are deaf. Copies of position descriptions are available electronically.

DMHDDSAS hosts a Deaf Mental Health Advisory Council (MHAC) to advise the Division on services and provide feedback related to programming. The 13-member Council meets four times per year in Raleigh. Most of the Council members are deaf and some identify as being in recovery. Further, the Division hosts three Community Listening Sessions each year at selected sites across the state to obtain feedback about programming and services.

**Service Array**

Most services are provided in the community. RHA utilizes secure telephone conferencing to provide Telepsychiatry and therapy services. While this technology has reduced travel, RHA staff still travel frequently and drive @225,000 miles per year to deliver services across the state. There are 5 service categories in the contract:

**Outpatient Behavioral Health**

Outpatient behavioral health services are psychiatric and biopsychosocial assessment, medication management, individual, group, and family therapies, psychotherapy for crisis, and psychological testing for eligible beneficiaries.

These services are intended to determine a beneficiary’s treatment needs, and to provide the necessary treatment. Services focus on reducing psychiatric and behavioral symptoms in order to improve the beneficiary’s functioning in familial, social, educational, or occupational life domains.

Outpatient behavioral health services are available to eligible beneficiaries and often involve the participation of family members, significant others, and legally responsible person(s) as applicable, unless contraindicated.

Based on collaboration between the practitioner and beneficiary, and others as needed, the beneficiary’s needs and references determine the treatment goals, frequency and duration of services, as well as measurable and desirable outcomes.

Outpatient Behavioral Health Services may occur face to face or via professional video conferencing equipment as professional practice standards dictate.

**Peer Support**

Peer Support Services are provided by certified Peer Support Specialists who are sign language fluent.

MH/SUD Peer Support services are structured and scheduled activities for adults age 18 and older with MH/SA disability. Peer Support services are an individualized, recovery focused approach that promotes the development of wellness self - management, personal recovery, natural supports, coping skills, and
self-advocacy skills and development of independent living skills for housing, employment and full community inclusion.

Interventions for Peer Support services are evidence-based per the Consumer Operated Services Evidence Based Practices Toolkit (SAMHSA, 2011) and are guided by a variety of research publication and principles identified by the Recovery Community Services Programs (SAMHSA, 2009).

Peer Support services align with the Recovery Oriented Systems of Care (ROSC) framework model and are a vital component necessary to promote individual resiliency.

Peer Support services may be provided in any location except for the Peer Support staff’s home. A fundamental feature of Peer Support is that the services are provided in the natural environment as much as possible. These services are non-clinical in nature and are aimed at increasing support to the individual being served and increase the individual’s “recovery capital”.

Collateral contacts and telephone calls to the individual are billable; however, 80% of contacts must be face-to-face with the individual receiving services. Face-to-face contacts may be subject to reasonable accommodations that are HIPAA compliant, and are not intended to replace or decrease the frequency of face-to-face contact. Peer Support Individual may not exceed 15 recipients per Peer Support staff. Peer Support Group may not exceed 6 recipients per Peer Support staff.

**Mental Health/Substance Use Disorder Outreach and Support**

This service consists of providing the assistance necessary to help the recipient achieve and maintain sobriety and recovery. The service is designed to help the recipient meet treatment, financial, social, and independent living goals. The worker provides coordination of movement across levels of care, directly to the recipient and his/her family. The worker assists other MH/SUD professionals with discharge planning and community re-entry following hospitalization, residential services and/or other levels of care. Service activities consist of a variety of interventions: identification and intervention to address barriers that impede the development of skills necessary for independent functioning in the community; family psychoeducation, and one-on-one interventions with the recipient to develop interpersonal and community coping skills. Outreach may assist the recipient with adaptations needed at home, school, and work; therapeutic mentoring; symptom monitoring; and monitoring medications. MH/SUD Outreach and Support includes assisting with the linking or integrating of needed services with other providers as well as assessment and reassessment of the recipient’s need for services. Outreach may also assist the recipient with accessing benefits and services.

**Mental Health/Substance Use Disorder Consultation**

This is a service provided to mental health, human service, and community planning/development organizations or to individual practitioners in other agencies or organizations. Consultation may be client specific and focus on individual client needs. Case Consultation is designed to assist in the development of insights and skills necessary to increase the quality of care available in the service delivery system. Additionally, this service is designed to assist organizations and/or practitioners to improve the service environment within their service delivery system.

**Mental Health/Substance Use Disorder Education**

This service is designed to inform and teach patients, families, schools, businesses, churches, industries, civic and other community groups about the nature of mental health, developmental disabilities, and
substance use disorders, and about available community resources. It also serves to improve the social functioning of recipients by increasing awareness of human behavior and providing alternative cognitive/behavioral responses to life's problems.

Outpatient Behavioral Health and Peer Support Services are Medicaid billable, Outreach & Support and Consultation & Education are not.

Data Summary

DMHDDSAS maintains a statewide, web-based database for tracking services. Below is summary of statewide data from SFY17 through SFY19. Comprehensive data reports are available electronically.

Adult Criminal Justice

Justice Systems Team

The Justice Systems Team was developed in 2001 following our recognition that our consumers of MH/DD/SA services were frequently also involved with the criminal justice or juvenile justice systems, and that effectively assisting those individuals requires dedicated staff working in close coordination with those systems. Through establishment of the Justice System’s Team, we’ve strengthened our partnership with the Dept. of Public Safety, including our prisons and community corrections, and our partnership with law enforcement agencies throughout the state. Functions and programs housed within the Justice Systems Team include TASC, jail diversion program management, Crisis Intervention Team (CIT) coordinator at the state level, DWI, Drug Treatment Schools, management of the controlled substance reporting system, our Mental Health First Aid initiative, and prison reviews of treatment programs for our consumers.

Community Behavioral Health Paramedicine (CBHP) Pilot Program

Community Behavioral Health Paramedics are Emergency Medical Services (EMS) staff who are specially trained to intervene with patients experiencing behavioral health crises. The CBHP program provides incentives for the participating EMS to either treat on-scene or route those patients not needing medical treatment to lower cost alternatives to hospital emergency departments (EDs). State funding was provided to twelve EMS agencies that collaborated with LME-MCOs and local providers to implement this program model.

CBHP Programmatic Goals:
1. Diverting individuals in behavioral health crisis to specialized behavioral health services, rather than a hospital ED, when appropriate, and
2. Ensuring individuals in behavioral health crisis, once fully evaluated, are referred to the least intrusive care that meets their treatment needs, thereby avoiding EMTALA rules on hospitals that restrict involuntary commitment (IVC) and transfer to any facility but those providing the highest and costliest level of care (inpatient).
3. Reducing ED usage and inpatient care, to reduce the cost of behavioral health crises.

An evaluation of this program determined it was effective in meeting all these goals, without compromising patient care or safety. DMA will be seeking to expand this pilot program through a state plan amendment making it a Medicaid reimbursable service, if permitted to do so by CMS.

CJ LEADS – County Jail LEADS

Every year, thousands of our consumers end up in our county’s jails due to behaviors resulting from symptoms of their mental illness – usually for minor crimes that pose little threat to public safety. Often the jails are not aware of the detainee’s mental illness, or if aware, they may not always contact the LME-MCO regarding the consumer’s medical needs. To more effectively and efficiently identify these consumers in jail, the DMH/DD/SAS and the NC Office of the Controller recently entered into an
agreement that will enable DMH/DD/SAS and the LME-MCOs to obtain the Criminal Justice Law Enforcement Automated Data Services (CJ LEADS) data regarding persons booked into jails throughout our state.

Obtaining CJ LEADS data eliminates the need for LME-MCO staff to manually check the daily jail booking logs for consumers. Each working day, an Excel file is made available to LME-MCOs providing them with data that can be sorted, filtered, and matched to their roster of consumers to help identify persons in your LME-MCO that have been booked into jail, along with information that will enable the LME-MCO to locate these consumers and contact the jail where they are detained. Using these data, your LME-MCO staff can quickly identify your consumers who’ve been booked into jail so that they can:

- Collaborate with the jail regarding the treatment needs of their consumers,
- Participate in planning for their release from jail, and
- Advocate for the diversion of these consumers from jail to treatment in the community, when appropriate.

There is a one-way flow of information from the jails to the LME-MCOs that includes no transmission of confidential or health-protected information. There will be no disclosure of any information about consumers back to CJ LEADS or our criminal justice partners.

The full potential of CJ LEADS has yet to be reached, as only one LME-MCO (Alliance) has developed an effective interface between the CJ LEADS database and the database of LME-MCO consumers. But the Alliance / CJ LEADS system may serve as a model for others in NC.
Crisis Intervention Teams

Crisis Intervention Teams (CITs) are pre-booking jail diversion programs that aim to provide people in mental health crisis the care they need instead of incarceration. Mental health professionals in partnership with NAMI NC and local affiliates have established CIT programs to provide law enforcement with the skills they need to deal with someone in a mental health crisis in this 40-hour training program. CIT programs also emphasize law enforcement and mental health systems working collaboratively to develop a network of services to support people in crisis. CIT helps to:

- Reduce officer and consumer injuries
- Reduce the arrest of people with mental illness
- Increase referrals to treatment for people with mental illness

| NC law enforcement officers CIT certified | 12,474 |
| Participating NC law enforcement agencies | 410 |
| Tele-communicators (dispatchers) CIT trained | 1302 |
| Private security officers CIT trained | 209 |
| Fire fighters, EMTs & paramedics CIT trained | 1615 |
| Others¹ who have received CIT training | 1350 |

An additional 1,304 CIT officers became CIT certified in calendar year 2018, resulting in a 12% increase from the previous year. An additional 8 law enforcement agencies began participating in a CIT program in North Carolina in 2018 - a 2% increase from the previous year.

There are approximately 16,139 police officers and 8,412 sheriff’s deputies in North Carolina, for a total of 24,551 law enforcement officers in the state². Based on these statistics, the proportion of all North Carolina law enforcement officers that were CIT certified by January 1, 2017 was more than 51%, though this percentage does not consider attrition, so the actual proportion maybe somewhat lower.

Although great progress has been made in disseminating CIT throughout the state, much remains to be done. Penetration of CIT in law enforcement agencies remains uneven; with some agencies having all their officers CIT-trained, many having enough CIT trained officers, and other agencies having few or no CIT trained officers. Also, many agencies participating in CIT have yet to establish protocols, implement procedures, or provide training to tele-communicators to assure that CIT officers are dispatched on all “mental disturbance” calls. Furthermore, the ability of local mental health systems to provide a drop off capacity and a quick turnaround for law enforcement varies throughout the state, though recent funding of Behavioral Health Urgent Care Centers and Facility-Based Crisis Centers have expanded this

¹ Others include magistrates, probation officers, NC State Bureau of Investigation (SBI) officers, National Park Service officers, community college staff, department of social services staff, hospital staff, peer specialists, domestic violence shelter staff, victim assistance staff, LME-MCO board members, animal control officers, provost marshals, officers from police departments in neighboring states, and military police from the following bases: Ft. Bragg, Camp LeJeune, Pope Air Force Base, and Seymour Johnson Air Force Base.

² Statistics obtained in 2015 from the NC Dept. of Justice, Training and Standards Division, and include only full time, sworn officers and deputies.
capacity. We expect North Carolina Crisis Intervention Teams will continue to expand CIT training to many more officers and other first responders in 2019.

Expansion of Mental Health Curriculum of the Basic Law Enforcement Training

People with mental health crises comprise at least 10% of all calls to which law enforcement officers respond. However, only about 1% (8 hours) of the 640 hours of basic law enforcement training that officers receive in North Carolina concerns dealing with people with mental illness.

Division of MH/DD/SAS Justice Systems team staff worked with the NC Justice Academy to revise and expand the basic training that law enforcement officers in NC receive on mental illness from the current eight (8) hours to a total of twenty-four (24) hours of instruction, to include auditory hallucination simulation exercises, practical skills training in de-escalating people in crisis, and instruction on topics such as Post-traumatic Stress Disorder (PTSD) that were unable to be covered in the eight hour curriculum. The-24-hour curriculum is being piloted in five training sites in NC, and will be rolled out state-wide in the spring of 2018.

Stepping Up Initiative in North Carolina

A national movement led by the National Association of Counties, the Council of State Governments, and the American Psychiatric Foundation, the Stepping Up Initiative aims to reduce the numbers of persons with mental illness who are inappropriately incarcerated in jails across our country. In North Carolina, county leaders are partnering with NC Division of MH/DD/SAS, the NC Association of County Commissioners, NC Psychiatric Association, and others to find ways to end the cycle of repeated incarcerations of people with mental illness in NC. At least 44 North Carolina counties have passed resolutions joining the Stepping Up Initiative and supporting its goals.

The Division of MH/DD/SAS has supported Stepping Up in NC through the provision of technical assistance to individual counties, through state-wide networking conference calls, through webinars provided by DMH/DD/SAS staff, and through a state Stepping Up conference event to which we brought nationally recognized experts on these issues, and was attended by more than 200 individuals, including many county commissioners, sheriffs, police executives, and others.

Treatment Assessment Screening Center (TASC)

The mission of TASC in North Carolina is to provide leadership and guidance for innovative treatment and recovery supports that result in opportunities for justice-involved individuals with behavioral health needs to achieve healthy and productive lives with their families and communities in our state. TASC bridges justice and treatment systems by linking treatment and justice goals of reduced drug use and criminal activity. Objectively balancing public safety and public health, the TASC care management model reduces recidivism and improves justice, treatment and individual outcomes. TASC is organized into four regions which reflect the state’s four judicial divisions, consistent with the unified court and statewide probation systems, and is available in all 100 North Carolina counties.

Services include: screening and assessment of an offender’s need for substance abuse or mental
health services; treatment matching to ensure that the offender receives the correct level and type of care; referral and placement with appropriate service providers, care management through individualized service planning, coordination and monitoring to ensure compliance with criminal justice conditions, progress in treatment and recovery supports. Through access to an array of services, TASC prepares probationers, parolees and post-releases for a healthy and safe return to their communities.

**Other Initiatives:** Support for jail diversion initiatives, including five mental health courts in North Carolina.

**Disaster Response and Recovery – Behavioral Health Services**

DHHS is an active member of the Governor’s Emergency Management Team. DMHDDSAS engages staff in State Emergency Response Team, staff members responsible for the MHBG planning and PATH grant planning actively engage when the state EOC is activated or on standby.

North Carolina has experienced successive catastrophic devastating long-term impact from a series of Hurricanes and Tropical Storms in recent years, Hurricanes Matthew and Florence most recently.

- **Hope 4 NC – FEMA/SAMHSA Disaster Recovery Crisis Counseling Services Training and Assistance Program** (CCP) after the impact of Hurricane Florence and subsequent flooding in September 14, 2018. These services are approved and federally funded through March 2020, completing the 9-month CCP:RSP at that time. All Hope 4 NC Crisis Counselors are trained providing survivor support services that are:
  - Strength-based: CCP services promote resilience, empowerment, and recovery.
  - Anonymous: Crisis counselors do not classify, label, or diagnose people. No records or case files are kept.
  - Outreach-oriented: Crisis counselors deliver services in the communities rather than wait for survivors to seek their assistance.
  - Conducted in nontraditional settings: Crisis counselors make contact in homes and communities, not in clinical or office settings.
  - Designed to strengthen existing community support systems: The CCP supplements, but does not end or replace, existing community systems.

*Hope 4 NC: The Crisis Counseling Program (CSP)* has a cadre’ of 200 crisis counselors working under the name Hope 4 NC to provide door-to-door, behavioral health crisis counseling outreach across the federally declared areas impacted by Hurricane Florence. Communities can expect:

- crisis counselors to engage with those at large, and especially those who are seeking disaster recovery supports and related services, to provide supportive crisis counseling and coping strategies, complete risk assessments and help individuals get connected to longer term behavioral health supports as needed. It is important to note that CCP crisis counseling is not traditional clinical treatment by licensed practitioners.
- Hope 4 NC team staff help navigate resource needs for special populations, such as children and those with disabilities.
Hope 4 NC crisis counseling outreach and education is coordinated with community programs and occurs with those with whom organizations work as well as with agency staff, social services, health care, community partners, child care, schools, community centers, senior centers, first responders, agricultural communities, among others impacted by Hurricane Florence.

CCP crisis counseling is provided with individuals or with groups or in community settings.

**Hope 4 NC** grant funds is serving those counties listed below that were deemed federally declared disaster areas prior to the grant’s submission.

LME-MCO map: [https://www.ncdhhs.gov/providers/lme-mco-directory](https://www.ncdhhs.gov/providers/lme-mco-directory)

As of June 30, 2019, more than 147,000 individuals served in 27 counties in the ISP through the four providers (LME/MCOs). Nearly triple the number served than initially estimated due to the successive CCP:ISP extensions.

More than 20,000 survivors were referred for more intensive community services to meet behavioral health and health needs.

On average 4,500 individuals per week and 300/day were served since the beginning **Hope 4 NC**.

More than 1100 calls to the **Hope 4 NC** hotline have been received with a person response 24/7 to each caller. On average 15-20 calls per day to the **Hope 4 NC** hotline 1-855-587-3463 (FIND).

Hope 4 NC will continue to provide crisis counseling for recovery and preparedness in SFY20.
CHILD/YOUTH MENTAL HEALTH
North Carolina’s System of Care for Children, Adolescents, Young Adults, and their Families

Child/Youth Services

NC DMHDDSAS has built the public child behavioral health service on the platform of the NC System of Care (NC SOC). NC has been based in System of Care for over 25 years. Guided by the SAMHSA’s evolution of the SOC concept, NC public child systems have agreed since 2006 that the following core elements are the backbone of the NC public service delivery system for children, transition age youth, young adults and their families:

- Family Driven, Youth Guided Services;
- Interagency collaboration;
- Care Coordination;
- Individualized, Strength Based Approach;
- Culturally and linguistically competent care; and
- Evidence-based or informed services provided in families’ home or in their communities.

In the past decade, based on research and increased understanding of the long-term effects of trauma, trauma-informed, resiliency-based strategies, supports and services has become another element of the NC SOC.

The NCDMHDDSAS goal for children and families served in the behavioral health system is to promote increased social-emotional health, wellness and quality of life by receiving the appropriate evidence-based, culturally and linguistically competent screening, assessment, and treatment services tailored to the individual/family at the appropriate time and for the right duration.

During the past 2 years, NCDMHDDSAS has continued to develop the infrastructure that supports the NC SOC framework. The SOC infrastructural components include:

- Assurance of the family and youth voice, as well as the enhancement of the family-agency partnerships at all levels.
- A comprehensive service array to meet the range of behavioral health needs of children/youth and their families.
- Cross-system partnerships and joint policy/operational oversight at both the local and state levels.
- Systems and operational decisions supported by both process and outcomes data.
- Workforce development strategies to support the fidelity of the evidence-based practice and ensure that practitioners are operating consistent with SOC principles and values.
- Strategic communication about the success and benefits of the SOC approach.

The child mental health MHBG application is organized as a discussion of the NCDMHDDSAS progress in strengthening these six infrastructural components.
I. **Assurance of the family and youth voice, as well as the enhancement of the family-agency partnerships at all levels.**

Families of children and youth with behavioral health needs are critical partners in the design and implementation of child-serving service delivery systems. Recognizing that families are the experts on their children/youth, that families are ones most impacted by service delivery system design, and that families are the ones who can best envision the services and supports that will result in the best outcomes, NCDMHDDSAS has invested in family advocacy and support since 1995 when NC implemented the first SOC federal grant.

Over the years, NCDMHDDSAS has supported statewide advocacy organizations that have been active in the development of NC children's behavioral health services. The two statewide organizations currently supported through the MHBG funds are North Carolina Families United (NCFU) and NAMI NC.

- **NAMI NC** has worked with dedicated community volunteer leaders to raise awareness and provide essential education, advocacy, and support so people affected by mental illness can build better lives. Their primary focus has been on adult with serious mental illness and have intentionally expanded supporting local child, youth and family advocacy. DMDHDDSAS works with state and community consumer, young adult, and family support and advocacy organizations. These organizations are implementing best practices that are evidence informed and peer led. Among those partnerships, NAMI NC implements some of these across the state through their affiliates that often increase access and facilitate and sustain engagement in effective services and supports that promote and sustain recovery. Some of these include NAMI Basics, Ending the Silence for middle and high school aged youth at no cost to schools and youth hubs, and In Our Own Voice among others. Such partnerships extend supports, further access and sustained engagement and self-advocacy.

North Carolina Families United is a primary family-run organization that focuses specifically on advocacy and supports for children, youth, and their families with behavioral health needs. NCFU is the state chapter of the National Federation of Families for Mental Health. Child MHBG funds and other federal funding has been allocated to NCFU to:

- Support state and local family outreach activity;
- Support family leadership participation at the North Carolina Collaborative for Children, Youth, and Families (also known as the State Collaborative) and other state planning and implementation committees;
- Provide SOC training for youth, family members and provider agencies;
- Support family peer support workforce development by supporting individual family members in receiving education on the role of family advocacy, training and support to obtain national certification as a peer support partner or family partner;
- Support the program development of Youth M.O.V.E. North Carolina (to be discussed later)
- Produce a SOC Family Handbook;
• Train and provide technical assistance on establishment and support of local family advocacy organizations;
• Provide focus groups and educational presentations on a current State Residential Redesign effort;
• Provide staffing support to regional summits on Transition Age Youth Regional Summits; and
• Provide educational support for families of children/youth with behavioral health as the state’s Medicaid Integrated Managed Care begins implementation in the fall of 2019.

DMHDDSAS’ partnership with NC Families United has netted the NC SOC many benefits, but the most significant accomplishments in the past couple of years include:

1) **The emergence of the Family Partner Coordinator (FPC) role**: This role was developed within NC’s 2014 SOC Expansion Implementation (XPI) Grant. This handful of FPCs performed dual role in the group. They had micro and macro responsibilities including the following:

**Micro**
- Providing direct peer support to families – particularly those who were ineligible for the grant service program;
- Recruiting and Mentoring Family Partners; and
- Participating in child and family teams as requested or as part of service coordination. Furthermore, they collaborated in the preparation of Child and Family Teams, followed up with families, partnered with SOC Coordinators in linking families with services/resources.

**Macro**
- Advocating for SOC values and principles when addressing the needs of families and providing quality control for the Child and Family Team process;
- Providing training and co-training, education, and coaching to youth and families, community and professional stakeholders, service providers, business communities, and family/natural supports while promoting family voice and choice; and
- Sitting on local and state collaboratives, boards, commissions, councils and community meetings to promote family voice and lend a family perspective.

This handful of FPCs were instrumental at all levels of SOC. The LME-MCOs who had benefitted from the FPC could only partially fund these positions beyond the grant. However, the Division’s Community Mental Health Section Chief decided that their role was so significant and would continue to be during the BH Integrated Care Medicaid Managed Care design and implementation that MHBG funds would supplement the positions so that they could continue to be full-time. The Division will continue to work with NC Families United over the next couple of years on a sustainability plan.

---

3 A Family Partner is a person who can articulate lessons learned from his/her own lived experience parenting a child/youth with social/emotional or behavioral challenges and has specialized training to assist and support families raising children/youth who experience social/emotional, developmental, behavioral, substance use, or mental illness concerns. A Family Partner Coordinator is a family partner who takes on a greater role in their local communities. They partner with families, the SOC Coordinators and other community stakeholders. They can have multiple kinds of responsibilities given their community’s needs. Both positions are paid positions. (NC SOC Handbook for Children, Youth and Families, 2018)
2) **The development of a family support peer definition:** NC Families United collaborated with both DMHDDSAS and the Division of Health Benefits (DHB-Medicaid) to develop a draft Medicaid and State Service definition. NC Families United is optimistic that these definitions will go into effect July 2020.

Going forward, DMHDDSAS wants to ensure that a substantial pool of individuals with lived experience as a primary caregiver for a child who had/had mental health or substance use disorders to become family support peers or family partner coordinators. The Division will continue to invest in recruitment, training, and certification of such individuals who want to become part of this emerging new workforce in the public behavioral health system.

Additionally, DMHDDSAS has become increasingly interested in supporting youth advocacy and support capacity building. Powerful Youth United -- youth advocacy group focused on youth with behavioral health issues—grew out of the North Carolina Families United in 1999. This group recruited membership, developed a youth leadership development manual and raised their concerns to state public child-serving agencies. In 2008, the group changed its name to Youth M.O.V.E. (Motivating Others through Voices of Experience) NC to align with the National Youth M.O.V.E. organization. Currently the group remains a program of NC Families United which has become the statewide chapter of the national organization. Its membership includes youth (as they transition to adulthood) between the age of 14-26 years old who want to raise awareness of the struggles of youth as they transition to adulthood, especially for youth with behavioral and mental health needs. This program provides youth leadership training, opportunities for members to make presentations around the state speaking to service delivery administrators/policymakers, practitioners and other youth and their families, produces newsletters and links to other youth organizations with similar, related causes. Youth M.O.V.E.NC participated in national advocacy support sessions during the aftermath of the tragic Parkland High School (Florida) shooting February 2018. Youth M.O.V.E. NC has established a board. They have leadership meetings with up to 40 individual youth/young adults from around the state. Youth M.O.V.E.NC has the following objectives:

- Assist young adults and agency partners with bringing youth leadership development to their area;
- Offer individual youth memberships to young adults interested in transforming systems (including mental health) while raising awareness and reducing stigma;
- Improve youth involvement on decision-making boards at the local and state levels;
- Unite the voices of young adults through youth leadership development and expanding local chapters of Youth M.O.V.E. in North Carolina; and
- Create opportunities for peer-to-peer mentoring.
II. Development and sustainment of a comprehensive service array that will meet the range of behavioral health needs of children/youth and families.

A key aspect of the NC SOC framework is the commitment to timely access to a quality, evidence-based, culturally responsive array of services for NC’s youth with SED.

Here is a graphic of NC’s service continuum for children.

The Child BH Community Services Continuum in NC includes:
- Outpatient Therapy
- Outpatient Therapy Plus (some LME-MCOs)
- Day Treatment
- SA Intensive Outpatient
- Intensive In-Home Services
- Multisystemic Therapy

In the last year, DMHDDSAS has invested in the Building Bridges Initiative to improve the coordination between residential and community providers as well as increase family and youth engagement when youth are in the Psychiatric Residential Treatment Facilities. This investment will support the successful transitions and improved long-term outcomes of young people served so they do not return to restrictive levels of care.

The next page shows the sfy2018 proportional Medicaid and state service funding spent for each child service category compared to the proportional numbers of youth served within each of the service categories.
Here is a comparison for child services for SFY 2017 and 2018 for both Medicaid and state-funded (including block grant) services.
Care Coordination

As stated at the beginning of the Child Mental Health section, care coordination is one of the foundational pieces of the NC SOC. The more complex the child's needs are, the more critical it is to provide high quality Care Coordination. The following is a brief outline of the levels of care coordination the NC SOC provides for children with behavioral health needs:

- Care Coordination is currently available within the LME-MCOs.
- Case Management is within service definitions for intensive in-home services, multi-systemic therapy, and day treatment.
- The NC SOC Expansion Implementation (XPI) grant that ended September 2018, left High Fidelity Wraparound (HFW) continuing to operate in 18 counties around the state. HFW in lieu of service definitions have been developed by five of the seven LME-MCOs. The Division continues to work with the Division of Health Benefits (Medicaid) to get a Medicaid service definition established. (The HFW program featured in more detail on the next page.)
- Tiered Care Coordination Pilots: The 2016 Governor’s Task Force on Mental Health and Substance Use recommended that pilots be established to test the effectiveness of a comprehensive case management strategy in improving outcomes for youth in the child welfare or the juvenile justice system who are identified with a primary substance use disorder; a primary serious emotional/behavioral disorder or an intellectual/developmental disorder with complex behavioral health needs. This initiative is exploring the effectiveness of a three-tiered care coordination approach. The first pilot began in 2017 in Durham (with Alliance Health). This site graduated after 18-month pilot. The two pilots now include Gaston, Lincoln, Cleveland in the Partners’ catchment area, and Cumberland County (with Alliance Health). The care coordination tiers of support include the following:
  - Tier 1: Local Management Entity-Managed Care Organization (LME-MCO) Liaisons and Family Navigator co-located at juvenile justice and child welfare offices and this provides access to these positions for youth in outpatient services. This also includes access to an assessor.
  - Tier 2: Addressing youth with moderate service level needs. This includes access to the Family Navigator and Liaisons. These are also youth in outpatient with low or moderate level needs as well as youth who are in enhanced services with case management built in. This Tier also includes an assessor.
  - Tier 3: Intensive Care Coordination (High Fidelity Wraparound) with evidence-based service planning model and family/youth peer support for youth exiting out-of-home placements as well as at risk for out of home placement. This tier is the primary focus for the pilot.
- Children with Mental Health and Intellectual/Developmental Disabilities (MH/IDD) and complex needs access case management through the federal Medicaid law called Early Periodic Screening, Diagnostic, and Treatment Services (EPSDT)
- Coordinated Specialty Care is provided for youth with first episode psychosis.
- YVLifeSet is a specialty care coordination and skill building service for youth aging out of foster care. Youth Villages has established several Public/Private ventures around the country (including North Carolina) to fund this foster care service model. This service is jointly funded...
Youth Villages (a MHBG provider in North Carolina) and the NC General Assembly. The map below identifies the sites in NC where this service is offered.

High Fidelity Wraparound

Developing the High Fidelity Wraparound Program based on NC’s experiences with the NC SOC XPI Grant has been one of the most significant accomplishments in the service array development of NC SOC in the past two years.

BACKGROUND
HFW is an evidenced-informed and standardized supportive service for youth (3-20 years old) with serious emotional disturbance or a youth with serious emotional disturbance and a co-occurring substance use disorder and/or intellectual/developmental disability. Currently, 5 LME-MCOs have submitted in lieu of service definitions to promote the use of HFW across North Carolina.

MODEL DESCRIPTION
- Ensures youth and family Voice and Choice drive treatment choices and direction
- Develop individualized youth and family plans
- Increase the presence and participation of natural supports
Increase self-efficacy of youths and families
Transition successfully to lower levels of care

NC HFW TRAINING PROGRAM
As a result of the original grant provided by SAMHSA, the NC High Fidelity Wraparound Training Program (NC HFWTP) was created and is housed at UNCG. This Training Program provides the following in fidelity monitoring and training:
- Coaching observations and debriefs and ongoing coach development plans
- Certification of each team member with ongoing fidelity monitoring
- On-site monitoring and development visits
- WFI-EZ: Wraparound Fidelity Index tool to measure fidelity to the model
- Individualized team member development plans
- Ongoing technical assistance provided as needed

OUTCOMES

<table>
<thead>
<tr>
<th>Year</th>
<th>Unsuccessful</th>
<th>Successful</th>
</tr>
</thead>
<tbody>
<tr>
<td>2017</td>
<td>48.5%</td>
<td>51.5%</td>
</tr>
<tr>
<td>2018</td>
<td>24.75%</td>
<td>75.25%</td>
</tr>
</tbody>
</table>

LESSONS LEARNED
The initial implementation of High Fidelity Wraparound lacked specific focus areas that included a protocol and system for fidelity monitoring, training, credentialing, and ongoing quality assurance and improvement. This resulted in poorer outcomes initially and the creation of the Training Program. Protocols and systems have now been in place for over 1 year and as a result, outcomes have significantly improved.

MOVING FORWARD
High Fidelity Wraparound will likely to play a significant role in the Medicaid Transformation, providing intensive care coordination to those youth most at risk for placement, in placement, or transitioning home. As such, the goal is to expand the delivery of HFW to all 100 counties in North Carolina and develop a State and Medicaid service definition to further support the sustainability of HFW in North Carolina.
Crisis Services and Supports

DMHDDSAS is working to improve the array of child and youth crisis services including:

- 2 Child FBCs Centers are fully operational in Buncombe and Mecklenburg counties.
- Alliance Behavioral Health is collaborating with Kids Peace to build the state’s third child FBC center located in Fuquay-Varina, NC. The site is currently undergoing construction and is moving forward with development plans previously designed.
- Sandhills Center is working together with Daymark to build the fourth child FBC in the state, in Richmond County. The Memorandum of Agreement between DHHS and Sandhills has been signed and executed. Construction is currently under way.
- Utilization of now 6 behavioral health urgent care centers.
- Visit to New Jersey to learn about mobile stabilization services in New Jersey, Connecticut, and Massachusetts. DMHDDSAS supported one LME-MCO in developing their mobile stabilization pilot which will launch in February 2018.

Map of Child Facility Based Crisis Services that are in the construction/renovation progress:

The Division supported a crisis services pilot in the Partners LME-MCO catchment area. This pilot is called the Mobile Outreach Response Engagement Stabilization Service (MORES). This pilot was adapted from the New Jersey service of the same name. In the past two years this pilot has demonstrated a different approach to the delivery of crisis stabilization for children with behavioral health challenges and their families. This is a mobile intervention for children, adolescents, and their families who are experiencing escalating emotional or behavioral symptoms or traumatic circumstances which have compromised the youth’s ability to function at their baseline within their family, living situation, school and/or community environments. The Practice Model has two phases in an episode of care: 1) response and assessment and 2) ongoing outreach, stabilization, engagement, and transition to appropriate services and supports. Episodes can be as brief as responding to the initial call or can last for up to 8 weeks.

Evidence-Based Trauma-Informed/Resiliency Based Services

The NC Child Treatment Program (NC CTP) is a major clinical training program in NC for evidence-based treatments for child traumatic stress and related diagnoses. NC CTP is a program under the Center for Child & Family Health (CCFH). CCFH is a National Child Traumatic Stress Network affiliate. The work is
funded through an annual appropriation by the General Assembly and overseen by the NC DMHDDSAS. NC CTP uses a learning collaborative model and rosters clinicians who demonstrate proficiency. Since 2006, the Child Treatment Program has trained over 900 clinicians. Trained clinicians are providing these evidence-based services in every NC county. CTP has provided learning collaborative in the following models over the last year:

1. Trauma Focused Cognitive Behavior Therapy (TF-CBT)
2. Parent Child Interaction Therapy (PCIT)
3. Child Parent Psychotherapy (CPP)
4. Structured Psychotherapy for Adolescents Responding to Chronic Stress (SPARCS)

This past year, CTP conducted two Clinical Consensus Panels to determine the most appropriate model to begin training with for children and adolescents with problem sexual behaviors. CTP will receive additional funding to develop and monitor this training in future years.

**Services for Youth Experiencing First Episode Psychosis (FEP)**

North Carolina currently funds three FEP sites and a technical assistance center with mental health block grant funds. The three sites provide early intervention services through evidence based Coordinated Specialty Care teams. DMHDDSAS requires its Coordinated Specialty Care teams to include peer support. One additional site tests innovative practices including ways to increase social support and help young people regain skills and confidence in the social arena. The CSC Teams address the young person’s dreams of recovery in addition to addressing symptom reduction.

The technical assistance center has developed a Coordinated Specialty Care Fidelity Monitoring Tool and a quality assurance database to track clinical and programmatic outcomes for all funded CSC sites. The technical assistance center offers monthly training and consultation calls for the disciplines within the CSC Teams including for medication management, individual therapists, family therapists, and supported education and employment specialists.

In addition, the technical assistance center has developed on-line trainings to assist general behavioral health clinicians to identify individuals experiencing FEP and make referrals to the CSC program in their catchment area.

In SFY 18, 178 youth were served by the three CSC Teams, located in Raleigh, Wilmington, and Charlotte. During the 2017-2018 fiscal year, programs received 183 referrals, admitted 71 patients, and discharged 33 patients.
Referral Sources: Referrals to the program were mainly from community mental health providers and psychiatric hospitals.

Referral Counties: Referrals mainly reflected the regions served by the program.
The average age of admitted patients was 21 years. Patients’ ages ranged from 14 to 28.

The majority of admitted patients (72%) were male.

Ancestry was reported as African American for 44% of admitted patients, Caucasian for 43% of admitted patients, Asian for 4% of admitted patients, Mixed for 1% of admitted patients, and Other for 7% of admitted patients.

Health Care Insurance
Most patients admitted during the reporting period were privately insured (56%).
Patients active in the programs during the reporting period were mainly insured by private insurance, by Medicaid, or were uninsured.
Other Child Service Array Enhancements

Residential Redesign: In 2018 DMHDDSAS embarked on a residential improvement initiative. DMHDDSAS, in partnership with other Divisions within the Department of Health and Human Services, began offering training and technical assistance to PRTFs in two national models, Six Core Strategies and Building Bridges Initiative. Six Core Strategies focuses on the prevention of restraint and seclusion while the Building Bridges Initiative focuses on bringing best practices to child residential care to improve long-term outcomes.

To learn how to support the infusion of best practices within PRTFs in order to decrease recidivism and improve long-term outcomes, DMHDDSAS partnered with the seven Local Management Entities-Managed Care Organizations (LME-MCOs) on seven PRTF Pilots. The pilots focus on family and youth engagement, a core strategy within Building Bridge and Six Core Strategies. Each pilot has support from Implementation Specialists from the Impact Center at the Frank Porter Graham Child Development Institute. Each pilot site will create an implementation team, conduct readiness assessments, and develop an implementation plan based on their strengths and needs. The one common strategy across sites will be hiring at least a halftime Family Peer Partner, a family member with lived experience raising a child with behavioral health challenges. The pilots will also focus on improving transitions from the PRTFs and will start work to identify long-term permanent family connections for youth in child welfare custody who do permanent family identified. By focusing on building long-term permanent family connections, NC can address the long-standing challenge of youth in child welfare custody revolving through multiple residential providers. No child should be raised in residential care, and DMHDDSAS’ inclusion of our residential providers into our NC System of Care using the Building Bridges Initiative framework will give our state the tools to address this systemic challenge.

Improved outpatient service: This year DMHDDSAS is supporting a MATCH learning collaborative for 40 clinicians within 6 provider agencies. MATCH is an evidence-based model for treating child/adolescent depression, anxiety, trauma, and disruptive behaviors. This flexible, individualized model tracks improvement through frequent outcome tracking with the family and youth. With the use of MATCH, youth get better faster, and clinicians feel more effective which helps to address workforce retention issues, as well.

Standardized assessments: Additionally, this year DMHDDSAS is piloting an effort in three LME-MCO catchment areas (Alliance Health, Cardinal Innovations Healthcare and Partners Behavioral Health Management) to promote the use of standardized assessments for youth in foster care. The goal is to have every youth entering foster care, four years or older, receive a standardized, trauma and evidence-informed assessment to ensure an appropriate diagnosis leading to an appropriate care plan for each child. These LME-MCOs will work with their local departments of social services in four counties. Implementation Coordinators will ensure the standardized assessment process is being implemented; manage and assist with provider clinical training and DSS trainings; track involved youth to ensure the screening and assessment process are completed to fidelity. An implementation manager will
manualize the processes and ensure that a project blueprint is available at the conclusion of the project to assure uniform replication state-wide.

Ongoing service array enhancements include:

- Expand care coordination models including High Fidelity Wraparound and tiers of care coordination
- Sustain and expand services and supports for young people with their first episode of psychosis
- Expand access to trauma informed intervention through the Child Treatment Program’s use of learning collaboratives and rostering of clinicians trained in evidence based trauma models
- Expand child facility-based crisis centers and consider redesigning mobile stabilization supports and services for children and youth based on local pilots
- Assess, plan and implement services for Transition Age Youth via the SAMHSA Healthy Transitions Grant

III. Cross-system partnership development and joint policy/operational oversight at both the local and state levels

Given that a substantial percentage of youth are served by multiple child-serving systems and that a large portion of those youth are ones with serious behavioral health challenges, cross-system partnerships that promote shared resources and accountability has always been a necessity for child behavioral health.

The Division has worked with the other public state child-serving agencies since the early 1980s (the days of the Willie M. lawsuit) to improve the child service delivery system. These efforts over the years now include the following:

- **Community Collaboratives** with representatives from families and multiple child-serving agencies who are tasked with coordinating local networks of care so that youth with behavioral health challenges can efficiently access a full array of services and supports; 67 Community Collaboratives. Of the 67, 59 are single county and 8 are multi-county collaboratives.

- **SOC Coordinators** are LME-MCO staff who support the local SOC infrastructure development (i.e. training to facilitate Child and Family Teams; promoting the involvement of family and youth at every level; and providing guidance and support to the Community Collaborative); In addition to the Coordinators, there are local Family Leads who support the community collaboratives, help families to navigate the local services and support family and youth voice. These family leads are often supported through a patchwork of federal, part-time LME-MCO contracts and even volunteer effort. The following identifies the numbers of all the SOC personnel support for each of the LME-MCOs:

  - **Alliance:** 4 SOC Coordinators; 3 Family leads (1 is part-time); 1 supervisor; 4 collaboratives
  - **Cardinal:** 4 SOC Coordinators (includes 1 vacancy); 3 family leads; 1 supervisor; 17 collaboratives
  - **Eastpointe:** 3 SOC Coordinators (includes 1 vacancy); 1 family lead; 1 supervisor; 6 collaboratives
  - **Partners:** 1 SOC Coordinator Liaison; 3 family leads; 8 collaboratives
- Sandhills: 3 SOC Coordinators; 5 family leads (part-time positions); 1 supervisor; 4 collaboratives
- Trillium: 8 SOC coordinators; no family leads; 3 supervisors; 22 collaboratives
- Vaya: 1 coordinator; 3 family leads; 2 supervisors; 8 collaboratives
- There is also a State SOC coordinator who supports this network of SOC personnel.

- The North Carolina Collaborative for Children, Youth, and Families (State Collaborative) This unique and long-standing state organization provides a forum for collaboration, advocacy and action among families, public and private child and family-serving agencies and community partners to improve outcomes for all children, youth and families. The state level collaborative engages cross-agency partners in solution-focused work to improve outcomes for children and youth [https://nccollaborative.org/](https://nccollaborative.org/) and has a direct supportive relationship with the Community Collaboratives across the state. [https://nccollaborative.org/community-collaboratives/](https://nccollaborative.org/community-collaboratives/)

- The Child Well-Being Transformation Council. This Council was established by the NC General Assembly through 2018 Session Law. This is a time-limited entity created for the purpose of coordinating, collaborating, and communicating among agencies and organizations involved in providing public services to children. The goal is to provide a more systematic and coordinated approach to services that will help ensure that he State achieves the best possible outcomes for children. This has the potential to lead to the establishment of a Children’s Cabinet that will be able to act on cross-system recommendation that flow from local, regional and state entities that are engaged in service delivery and design.

- DHHS State Suicide Prevention Plan (DHHS 2015) – Continued implementation of key components of this plan that especially address block grant populations across ages continues, although with limited designated state or other funding to ensure successful, sustainable implementation. The General Assembly did fund recurring through SFY2022, the state’s call center for the National Suicide Prevention Lifeline 1-800-273-8255 for all 100 counties located in Greenville, NC where all NC calls received a trained person response, direct connection to necessary support with the LME/MCOs and/or crisis services or active interventions through multi-pronged strategies. In response to the mass violence events and inaccurate pairing of violence with mental health, the Governor has requested the DHHS update this plan in SFY2020.

- DHHS Opioid Action Plan 2.0 (DHHS 2019) – This updated plan includes additional alignment with related populations with co-occurring needs for prevention, early intervention, treatment and recovery supports across ages. This work interfaces with the work supported through the SAMHSA Substance Abuse Prevention and Treatment Block Grant (SABG).

- Hope 4 NC – FEMA/SAMHSA Disaster Recovery Crisis Counseling Services Training and Assistance Program (CCP) after the impact of Hurricane Florence and subsequent flooding in September 14, 2018. These services are approved through March 2020, completing the 9-
All Hope 4 NC Crisis Counselors are trained providing survivor support services that are:

- Strengths-based: CCP services promote resilience, empowerment, and recovery.
- Anonymous: Crisis counselors do not classify, label, or diagnose people. No records or case files are kept.
- Outreach-oriented: Crisis counselors deliver services in the communities rather than wait for survivors to seek their assistance.
- Conducted in nontraditional settings: Crisis counselors make contact in homes and communities, not in clinical or office settings.
- Designed to strengthen existing community support systems: The CCP supplements, but does not end or replace, existing community systems.

Hope 4 NC: The Crisis Counseling Program (CSP) has a cadre of 200 crisis counselors working under the name Hope 4 NC to provide door-to-door, behavioral health crisis counseling outreach across the federally declared areas impacted by Hurricane Florence. Communities can expect:

- Crisis counselors to engage with those at large, and especially those who are seeking disaster recovery supports and related services, to provide supportive crisis counseling and coping strategies, complete risk assessments and help individuals get connected to longer term behavioral health supports as needed. It is important to note that CCP crisis counseling is not traditional clinical treatment by licensed practitioners.
- Hope 4 NC team staff help navigate resource needs for special populations, such as children and those with disabilities.
- Hope 4 NC crisis counseling outreach and education is coordinated with community programs and occurs with those with whom organizations work as well as with agency staff, social services, health care, community partners, child care, schools, community centers, senior centers, first responders, agricultural communities, among others impacted by Hurricane Florence.
- CCP crisis counseling is provided with individuals or with groups or in community settings.

**Hope 4 NC** grant funds is serving those counties listed below that were deemed federally declared disaster areas prior to the grant’s submission.

**Hope 4 NC – Crisis Counseling Program after Hurricane Florence**

LME-MCO map: [https://www.ncdhhs.gov/providers/lme-mco-directory](https://www.ncdhhs.gov/providers/lme-mco-directory)

- As of June 30, 2019, more than 147,000 individuals served in 27 counties in the ISP through the four providers (LME/MCOs). Nearly triple the number served than initially estimated due to the successive CCP:ISP extensions. More than 20,000 survivors were referred for more intensive community services to meet behavioral health and health needs.
- On average 4,500 individuals per week and 300/day were served since the beginning **Hope 4 NC**.
More than 1100 calls to the Hope 4 NC hotline have been received with a person response 24/7 to each caller. On average 15-20 calls per day to the Hope 4 NC hotline 1-855-587-3463 (FIND).

NC Medicaid/Division of Health Benefits
DMHDDSAS and Division of Health Benefits (formerly known as the Division of Medical Assistance) have worked closely together for several years on child behavioral health policy development. In the wake of the Integrated Care Medicaid Managed Care reform currently underway, the partnership has continued. The two divisions are working on the revision of community-based service definitions as well as joint development of new services (e.g. family peer support and mobile response) and a major Residential Improvement effort. The Department of Health and Human Services staff brought these two Divisions together with the Duke Child and Family Policy Center to respond to the Notice of Funding Opportunity testing the SAMHSA Integrated Care for Kids (InCK) model.

Governor’s Early Childhood Action Plan
https://files.nc.gov/ncdhhs/ECAP-ExecSummary-WEB.pdf

NCDMHDDSAS has been a strong participant in an interagency development of the North Carolina Early Childhood Action Plan. The Governor issued an executive order that directed DHHS to develop the plan. This Plan outlines a cohesive vision, sets benchmarks for impact by the year 2025, and establishes shared stakeholder accountability to achieve statewide goals for young children from birth through age 8. The plan provides a framework for galvanizing coordinated action across public and private stakeholders throughout NC and centers around making measurable changes in early childhood outcomes. It includes 10 data-informed goals and will continue to grow and develop over time. Over 350 stakeholders from across the state were involved. More than 1,500 people provided feedback on the plan. This plan addresses the essential developmental needs of very young children, including and especially social, emotional, mental health and behavioral health needs and those of their families and caregivers. Aim is focused on building a sustainable effective system of supports and services in NC through age 8 across formal and informal supports. Related interagency efforts such as the CDC Essentials for Childhood, and Home Visiting and HRSA grant funded initiatives addressing the mental health of young children and maternal/parent behavioral health needs, such as implementing effective positive parenting programs, Triple P statewide thru interagency alliance and governance and Learning Collaborative among existing local implementation providers.

Division of Social Services (Child Welfare)
Child Welfare is responding to both the state regionalization mandate and the federal Family First Prevention Services Act (FFPSA). In the recent past DMHDDSAS staff participated in the development of the Division of Social Services Performance Improvement Plan. Now the Division is an active partner in the DSS-established workgroups to implement the systems requirements of the FFPSA. The Division believes that recommendations from the Bridging Local Systems project led by the NC Institute of Medicine which involved local departments of social services and LME-MCOs will be implemented to improve cross-system functioning.

DMHDDSAS has been engaged for several years with the DSS Project Broadcast. This pilot project focused on improving trauma informed care—screening, assessment, and treatment for children-- and
culture change/ support for several local departments of social services. As the state child welfare has begun statewide implementation of those pilot efforts, the Division continues to encourage local LME-MCOs to develop a complementary system to support trauma-informed care for this population.

Juvenile Justice
The Department of Public Safety is preparing for Raise the Age which will welcome 16 and 17-year-olds into the Juvenile Justice system beginning December 1, 2019. Many of these youths will be referred to the behavioral health system for assessment and treatment. [Beyond Raise the Age, there is also legislation that could drive 14,000 youth involved with the Juvenile Justice system into the behavioral health system for comprehensive assessments.] Through a state level Juvenile Justice-Behavioral Health Team has been working through a series of cross-system service barriers. The State team has also collaborated in sharing specific concerns/recommendations about meeting the behavioral needs of youth involved with juvenile justice system to the national consultant firm that is designing the new behavioral health system in the Medicaid Managed Care reform.

Department of Public Instruction

Education in Psychiatric Residential Treatment Facilities: DMHDDSAS and the Department of Public Instruction (DPI) partner to ensure the educational needs of youth in PRTFs are addressed. Funded and legislated by General Assembly (Part 4 of Article 6 of Chapter 122C of the General Statutes). DMHDDSAS and DPI staff develop contracts for education within PRTFs, monitor through joint site visits, and provide training and technical assistance on education requirements including transitions to community schools.

School Based Mental Health Policy: During the last two years, DMHDDSAS and LME/MCO provider network staff and family and youth with lived experience participated in DPI-led work groups to develop new school based mental health policy that required local school districts to develop plans for school based mental health services. The school based mental health policy was subsequently removed in the 2018 General Assembly legislative session. However, the Division has continued to partner with DPI in the implementation of a strategic plan to expand school mental health services across the state and to improve access to the behavioral health treatment system. The Division is partnering with DPI in a Southeastern Region Learning Collaborative that is hosted by the Southeast Mental Health Technology Transfer Center and funded by SAMHSA, Project AWARE (ACTIVATE): The Division is also in the process of hiring a part-time staff person who will serve as a liaison with DPI to assist in the implementation of the DPI SAMHSA Project AWARE grant. The grant pilots the framework of the SMHI implementation plan in three different Local Education Agencies (LEAs)/school units and communities across the state in collaborative partnership with LME/MCOs and provider networks, families and youth with lived experience.

IV. Systems and Operational Decisions Supported by Both Process and Outcomes Data

Through its contracts with LME-MCOs, DMHDDSAS requires quality assurance measures and a continuous quality improvement process. LME-MCOs submit performance data quarterly. Some of the indicators submitted to DMHDDSAS are penetration rates, initiation rates (two initial services with 14
days), engagement rates (initiation visits plus 2 additional services within 30 days), and length of stays in community psychiatric hospitals. This information is reported by age category (3-17 years and 18+) as well as by funding source.

In addition, NC has an outcome tracking system, NC-TOPPS. Outcome data is gathered at admission, three months, six months, and discharge. Enhanced providers are required in their LME-MCO contracts to collect NC-TOPPS data. Some examples of the information and outcomes collected in the NC-TOPPS system includes gender, age, race/ethnicity, diagnoses, substance use, attendance at treatment sessions, reasons for ending episode of care, severity of symptoms, quality of life ratings, participation in positive activities, juvenile justice involvement, suicidal ideation and attempts, grades, school suspensions and attendance, housing, crisis service use, whether service needs were met, barriers to treatment, and helpfulness of treatment. DMHDDSAS, LME-MCOs, and providers can run aggregate and individual client level reports in the NC-TOPPS system. In addition, there is a public interface so that consumers and Community Collaboratives can run reports for child services in their region.

Below are a few examples of child and adolescent outcomes from NCTOPPS.

**Child Outcomes (2017)**

V. **Workforce development strategies that support the fidelity of the evidence-based practice and ensure that practitioners are operating consistent with SOC principles and values.**

DMHDDSAS has focused on the following child behavioral health workforce development strategies:

1) **Development of a NC training, coaching, and monitoring program for High Fidelity Wraparound.** This program is currently housed in the University of North Carolina at Greensboro. The HFW Program provides training, coaching, and certification of new HFW coaches. Specific tasks include:
• Approve, support, and monitor all HFW teams in NC
• Provide technical assistance to providers and LME-MCOs on selection of providers and selection of HFW staff
• Audit fidelity to the NC Wraparound Model. Findings can lead to program improvement plans and additional support.
• Monitor certification of all HFW roles
• Include at least one staff member with lived experience
• Support implementation and quality assurance

2) Support of the Coordinated Specialty Care for young people experiencing first episode psychosis through the NC technical assistance center.

3) Spread of evidenced based trauma interventions through the Child Treatment Program across the state. The Child Treatment Program trains through a learning collaborative model, tests proficiency, and rosters clinicians who have met proficiency standards.

New workforce development areas include:

• Supporting the development of family and youth peer support staff and supervisors
• Increasing the capacity of residential providers to support youth and their families in a return to their homes and communities with the appropriate supports
• Support the development and implementation strategies to improve the capacity of providers to serve transition age youth
• Use of MATCH, an evidence-based model to improve youth outcomes and clinician efficacy.

VI. Strategic Communication

Children’s Mental Health Awareness Month is the primary occasion in which NC Families United, the State Collaborative, local family organizations, and local community collaboratives collaborate to provide education about children's mental health, promote NC SOC themes, and coordinate events to reduce the stigma of child behavioral health issues. Governor’s Proclamations are obtained, school-family organizations events are coordinated, the State Collaborative recognizes SOC champions, and celebratory events occur.

The State Collaborative provides a consistent public forum to present on various features of SOC practice, system partners’ collaborations, and family advocacy and support issues. During the final year of the NC SOC (XPI) grant, The State Collaborative’s Social Marketing Committee contracted with a local professional film-maker to showcase the NC SOC. The State Collaborative has conducted a series of Learning Institutes for local SOC communities over the past two years on topics including: trauma-informed care, school mental health, and suicide prevention.

The Division, the State Collaborative, and a local LME-MCO with a SAMHSA SOC Expansion grant will collaborate over the next year in “rebranding” NC SOC to incorporate the new Integrated Care Medicaid Managed Care environment.
The Division staff make routine presentations on the development of the NC child behavioral health system at children services conferences, community collaboratives, at workforce development venues, etc.

Crisis Services

Crisis Solutions Coalition Workgroup

The Crisis Solutions Initiative Coalition workgroup includes members from various statewide organizations partnering to improve NC’s behavioral health system’s crisis response capacity. The Coalition works to develop and design strategic solutions for improved care for individuals who may experience a MH/IDD/SU crisis in order to reduce the number of visits to Emergency Departments and an increase in utilization of alternate community based services/facilities.

Facility Based Crisis Centers (FBCCs) and Behavioral Health Urgent Care Centers (BHUCs)

BHUCs are outpatient facilities that provide walk-in crisis assessment, referral, and treatment for adults with an urgent or emergent need for mental health, intellectual or developmental disabilities, or substance abuse services. Licensed behavioral health professionals and medical staff with prescriptive authority provide services. NC currently has six 24-hour BHUC facilities with plans for one more site that will be supporting communities.

FBC Centers are licensed 24-hour residential facilities that provide short term acute crisis stabilization (comprehensive clinical assessment, treatment intervention, behavior management or support plan) for children and adolescents, or adults who have a mental illness, intellectual or developmental disability, or a substance use disorder. NC currently has 23 facility based crisis centers with 313 licensed beds; twelve are IVC designated.

Community Behavioral Health Paramedicine Pilot Program

The Community Paramedicine BH Crisis Transport pilot program is an emergency department diversion program for individuals in behavioral health crisis to community alternatives for specialty behavioral health crisis intervention. Currently, nine sites operate within five LME-MCO catchment areas. Persons are treated at the scene or diverted to an FBC or BHUC.

Psychiatric Advanced Directives (PADs)

PADs allow competent persons, through advance instructions and/or appointment of a surrogate decision maker, to state their preferences for future behavioral health treatment in the event of an incapacitating psychiatric crisis. We are currently training healthcare professionals and staff in how to develop and use PADs.
Access to Care

Access to Care is monitored through contractual requirements and performance metrics that are reported quarterly.

Standards

- Emergent Care - Assessment and/or treatment within 2.25 hours of the request for care.
- Urgent Care - Assessment and/or treatment within 2 calendar days of the request for care.
- Routine Care - Assessment and/or treatment within 14 calendar days of the request for care.

Additional Monitoring

- Annual Perception of Care Survey
- NC-TOPPS

Annual Network Adequacy & Accessibility Analysis

- The LME/MCO Community Mental Health, Substance Use and Developmental Disabilities Services Annual Network Adequacy & Accessibility Analysis is one part of a continuous assessment and action process with each component driving the focus of the next:
  - LME/MCOs assess and study the LME/MCO’s community to determine needs and providers to deliver services;
  - LME/MCOs develop or update LME/MCO strategic plans, such as local business plans, network development plans and strategic initiatives, as needed, to incorporate results from the LME/MCO Network Adequacy & Accessibility analysis;
  - LME/MCOs implement strategic plans through local initiatives, quality improvement projects and other actions;
  - LME/MCOs review and assess action steps taken and determine progress and challenges in meeting needs and adjusting resources to respond to gaps in services. Annually the LME/MCOs submit a Network Adequacy & Accessibility analysis that is reviewed and approved by DMH/DD/SAS.

- In the event that the LME/MCO has a gap in a service area they submit a service exception request and answer the following questions:
  - Number of providers of the service under contract
  - Number of individuals receiving the service
  - Number of individuals in need of the service
  - Reasons why the access and choice standard cannot be met
  - New request or have you previously requested exception
  - Plan for how the LME/MCO will meet an individual’s need for access or choice to the service
  - Expected ending date of this exception
Follow-up is done on a quarterly basis through the Interdepartmental Monitoring Team.

Urban & Rural Areas of North Carolina

North Carolina
US OMB Metropolitan (Urban) and Non-Metropolitan (Rural) Counties

- Metropolitan (Urban) and Non-Metropolitan (Rural) Counties
- Metropolitan (Central County) (30 counties)
- Metropolitan (Outlying County) (16 counties)
- Non-Metropolitan (Rural) (54 counties)

Urban includes Metropolitan counties (46 counties).
Rural is anything other than Metropolitan counties (54 counties).
Central County - at least 50 percent of the population resides within urban areas of 10,000 or more population or contain at least 5,000 people residing within a single urban area of 10,000 or more population.
Outlying County - included in the Metro/Micro Statistical Area if they meet specified requirements of commuting to or from the central counties.
Data Sources: http://www.census.gov/population/metro/data/def.html (July 2015)

Source: U.S. Census Bureau, Population Division; Office of Management and Budget, July 2015 delineations, http://www.census.gov/population/metro/data/def.html, Internet Release Date: April 2016, Downloaded 7/15/16. The United States Office of Management and Budget (OMB) delineates metropolitan and micropolitan statistical areas and designates counties as Metropolitan, Micropolitan, or Neither according to published standards that are applied to Census Bureau data. The general
concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. A Metropolitan area contains a core urban area of 50,000 or more population. OMB considers all counties that are part of a Metropolitan Statistical Area (MSA) to be urban and all counties that are not part of an MSA to be rural. In NC there are 46 metropolitan (urban) counties and 54 non-metropolitan (rural) counties. The above table shows the counties that are designated as metropolitan (urban) counties. All undesignated counties are non-metropolitan (rural). The micropolitan counties that are part of the non-metropolitan (rural) group of counties are not annotated. Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a "central county" (counties). Additional "outlying counties" are included in the MSA if they meet specified requirements of commuting to or from the central counties.

Source: [http://www.census.gov/population/metro/about/](http://www.census.gov/population/metro/about/)

**How LME-MCOs and State Psychiatric Hospitals (SPHs) Coordinate Behavioral Health Services**

- SPHs routinely update LME/MCOs concerning hospitalized beneficiaries from their respective catchment areas, sending daily admission and discharge reports to the LME/MCOs, accordingly.
- SPHs are committed to returning people to their communities when well and begin discharge planning as early as possible after admissions.
- LME/MCOs, via their hospital liaisons, work with the SPHs to assist with discharges.

**Use of Telehealth to Deliver Behavioral Health Care**

**Delivering State Funded Behavioral Health Services Using Telehealth**

NC DMHDDSAS has funded the use of telehealth (also referred to as telemedicine or telepsychiatry) in the delivery of selected behavioral health services since 2007. The policy that NC DMHDDSAS has employed to guide the funding of services delivered via telehealth for persons, who rely on state-funding and who do not have Medicaid or other third-party health insurance, is the NC Division of Medical Assistance’s [Telemedicine and Telepsychiatry Clinical Coverage Policy No. 1H](https://files.nc.gov/ncdma/documents/files/1H.pdf). This Medicaid policy was first implemented in 1999.

**History of NC DMHDDSAS’ Involvement with Telehealth**

NC DMHDDSAS received funding from the NC Rural Health Foundation to award grants to ten (10) pilot programs managed by ten Local Management Entities (LMEs) and selected providers in 2007 and 2008. In State Fiscal Year (SFY) 2008-09, NC DMHDDSAS allocated $1,650,000 to LMEs for the purchase of telepsychiatry equipment to be used in Walk-In Crisis and Immediate Psychiatric Aftercare centers. NC DMHDDSAS posted Guidelines for the Use of Telepsychiatry in April 2010 to the NC DMHDDSAS website.

**NC Statewide Telepsychiatry Program in Emergency Departments**
In August 2013, the NC Department of Health and Human Services (DHHS) submitted a *Statewide Telepsychiatry Program Plan* to the Senate Appropriations Committee on Health and Human Services House Appropriations Subcommittee on Health and Human Services Joint Legislative Oversight Committee on Health and Human Services and Fiscal Research Division.

The *Statewide Telepsychiatry Program Plan* was developed to improve access to psychiatric assistance to persons with behavioral health crises who seek help in Emergency Departments (EDs). ED physicians request and receive psychiatric consultation from a remote psychiatrist via the use of telepsychiatry. Improved access is intended to:

- Reduce the length of time that the individual in crisis must wait for behavioral health assessment and referral to an appropriate level of care; and
- Reduce costs by avoiding unnecessary admissions to the most expensive and restrictive services available, psychiatric inpatient care in hospitals.

In response to the submission of the *Statewide Telepsychiatry Program Plan*, the NC General Assembly appropriated $4 million over a two-year period, followed by additional funding of $1.5 million from the Duke Endowment.

**Telehealth Moving Forward in North Carolina**

The DHHS Office of Rural Health and Community Care submitted a *Report on Telemedicine Study and Recommendations* to the NC Joint Legislative Oversight Committee on Health and Human Services on October 1, 2017.

https://d3n8a8pro7vhmx.cloudfront.net/fiscalhealthnc/pages/1443/attachments/original/1507145896/SL_2017-133_Section_2_DHHS_Study_and_Recommenda_Telemedicine_Policy_10-2-17_%2802%29.pdf?1507145896

The following recommendations were included:

- “aggressive statewide telemedicine policy” to improve health and increase access to high quality care;
- Improve access to healthcare workforce via
- Interstate Licensure Compacts (e.g., PSYPACT)
- Increase incentives for providers to reach underserved areas
- Enact recommendations of NC Office of Broadband Infrastructure’s 2017 Broadband Report
- Establish Legislative Subcommittee to develop comprehensive telemedicine implementation plan

NC DMHDDSAS will continue to collaborate with its sister agencies in DHHS, LME-MCOs, providers, and other interested partners to promote the use of telehealth as a vehicle to increase access to behavioral health care for persons in North Carolina.

**Cultural Competency**
Removing the Elephants in the Room & Broadening Your Cultural Lens, both trainings, explore cultural issues NC’s behavioral health system faces, e.g., by examining the Cultural Formation section of the DSM-5 and the ethical principles that govern licensed professionals.

Removing the Elephants in the Room training

- 30+ trainings; began February 2015, continues with most recent training offered December 2018
- LME-MCOs, AHEC, Provider agencies
- Provider staff at all levels, LME-MCO staff at all levels, State & Local CFAC members, family members, advocates, AHEC staff
- Mental Health & Substance Abuse agencies
- Substance Abuse agency had entire staff trained (~180)

Broadening Your Cultural Lens

- 15+ trainings; began May 2017; continues with most recent training offered December 2018
- Mental Health First Aid instructors, court counselors, juvenile justice professionals, school staff, law enforcement, probation, child welfare

Broadening Your Cultural Lens: Social Determinants and Health Disparities

- This is phase 2 of the previous trainings and will begin January 2018
- Explores ways in which social determinants of health and culture intersect

Cultivated Relationship with the NC Office of Minority Health and Health Disparities

- Established a liaison between DMH/DD/SAS and OMHHD to facilitate the integration of public and behavioral health related to social determinants of health.

LME-MCOs and Provider Agencies

LME-MCOs and Provider Agencies often develop their own cultural competency related activities, tools and trainings, influenced by division related trainings. The division does not develop or direct the development of cultural competency trainings; however, its work often influences LME-MCO / Provider outputs in this regard. Examples include:

- Cultural Competency Plan
- Cultural Competency Review Tool
- Cultural Competency Assessment
- Cultural Competence Provider Council
- Online trainings
- Instructor-Led trainings

The fundamental precepts of cultural competence include developing respect for differences; cultivating successful approaches to diversity; increasing awareness of one’s self and of unstated institutional cultural norms and practices; and having a working knowledge of the history, culture, beliefs, values and needs of diverse people and communities. A culturally competent approach to services requires the system to examine and potentially transform each component of mental health, intellectual and developmental disability and substance use services.
Cultural Competency Plan Recommendations

1. Develop a community system of professional mental health, developmental disability and substance abuse care that responds to the clinical needs of those we serve in the context of their culture.
2. Adopt and promote the use of the fifteen National Standards for Culturally and Linguistically Appropriate Services in Health Care (CLAS) as created by the Office of Minority Health.
3. Provide educational workshops and training in addressing cultural competence in behavioral health agencies.
4. Foster and advocate for policies and practices that support adherence to federal laws related to cultural competence.
5. Partner with the Office of Minority Health and Health Disparities to add behavioral health as an indicator on its Racial and Ethnic Health Disparities in North Carolina Report Card.
6. Establish a Cultural Competence work group within the DMH/DD/SAS.
7. Develop a cultural competency training framework that provides the system a model which can be used to build and train MH/DD/SAS professionals.
8. Research and identify best practices effective in offering culturally diverse services.
9. Engage with community-based and faith-based organizations to foster trust and support for community education forums.
10. Ensure data collection efforts include demographic points specific to race, ethnicity, gender and disability.

Customer Service and Community Rights, and Community Engagement and Empowerment Teams

These teams’ role is to support access to appropriate services, ensure rights protections in the community, and promote consumer empowerment and system advocacy. Staff include consumers and family members. They work to make it easy for consumers to share their concerns, answer their questions, help resolve their complaints, and process their appeals. There are two teams to assist consumers:

Community Engagement and Empowerment Team

- Keep you, your family members and advocates actively involved in local and state policy
- Ensure your voice, input, and service category representation (Mental Health, Intellectual/Developmental Disabilities and Substance Use Disorders) are included in improving the service system
- Help develop local grass roots advocacy and consumer groups.
- Provides support and assistance to the state and local Consumer and Family Advisory Committees (CFACs) to ensure empowerment and an informed system.
Working to ensure stakeholders have input in the design and implementation during Medicaid Transformation

Customer Service and Community Rights Team

Accessing Services

- Assist individuals and families with accessing appropriate, quality mental health, intellectual and other developmental disabilities, and substance use services.
- Assist individuals, family members, providers and citizens in accessing community resources to address other needs, including Medicaid, assistance for food, etc.
- Provide education about accessing resources for individuals and families moving to North Carolina.
- Provides services like case management for individuals with complex needs and assists individuals in obtaining appropriate, quality services. This includes individuals in a hospital emergency room, transitioning from residential service, or individuals without appropriate connection to other services.

Complaint/Concern/Grievance Response

- Assist individuals and families in filing and working toward a resolution for complaints/concerns/grievances.
- Provide information regarding response system for complaints/concerns/grievances.
- Provide information regarding services and rights to individuals and family members at all points of services including transitioning to appropriate services, changing providers.

Appeals

- Assist individuals and guardians with the process for appeals for denial, reduction, suspension and termination of state-funded services.
- Provide information to individuals, guardians and families regarding website and contact numbers for appeals for denial, reduction, termination and suspension of Medicaid services.

Technical Assistance/Monitoring

- Provide technical assistance to providers, LME-MCOs and other state agency staff on issues such as services, consumer rights, incident reporting, customer service issues, etc.
- Collect and analyze aggregate data regarding complaints, incidents, appeals and information inquiries.

Rights of Individuals Receiving Services

- Provide information regarding response system for the protection of rights when individuals are served in the community.
Monitoring community and individual rights protections, and health and safety through the incident reporting system.

Our team members complete warm phone transfers when individuals are in crisis or we feel that there is an urgent need for caller to be connected. Staff connect with a Licensed Clinician at the caller’s LME/MCO to assure that a person in crisis receives needed assistance. If our team receives a letter or e-mail (such as those sent to Asha) in which we are concerned about the safety of an individual, we ask the LME/MCO to have provider staff who are working with the individual to contact the individual. If there is no provider working with the individual, we ask the LME/MCO to request a well-check from the police.

Complaints and inquiries are received from the consumers, family members, providers, Governor’s office, legislative offices, DHHS Secretary of Health and Human Services Office, DMH/DD/SAS Division Director’s office, LME/MCO offices, community members and other stakeholders. Our team members assist individuals with all aspects of requests from requests to access services, resolving complaints, facilitating services for individuals in transition from hospitals and other settings, resolving issues with providers, informing individuals and families about their rights, etc. Staff members assist the caller or writer to the best of our ability to receive information needed toward resolution, including using Google to find information that may not pertain to MH, IDD and/or SU services. In FY 2017-2018, our team addressed 357 complaints of the total of 5,034 independent inquiries (Complaints, Information/Referrals, Incident Reports and State-funded Appeals) received by our office. Data from our team is analyzed in a quarterly report.

Adverse Events and Overview of Incident Response and Improvement System (IRIS). IRIS is our electronic incident reporting system. Providers enter an incident report into the electronic system within 72 hours of learning of the incident. The categories of an incident are death, injury, restrictive interventions, medication error, allegations of abuse/neglect and exploitation, consumer behavior, suspension, expulsion and fire. Each incident is leveled between 1 and 3, based on severity. Level I incidents generally require first aid or less for services and Level II incidents generally require treatment beyond first aid and/or police involvement or oversight agency. Level II incidents also include deaths from natural causes or terminal illness. Level III incidents are the most serious and may result in permanent or psychological impairment, a threat to safety and/or result in a media contact. Deaths from suicide, homicide, violence or unknown causes are considered Level III. Once a provider enters an incident report, the report immediately is sent to the Host LME/MCO (county where individual is receiving services), home LME/MCO (where individual resides), and licensing agency of the facility (if service is a licensed facility). If the report is a Level III, the report is also submitted to the CSCR team and if it involves a death at a licensed facility as a result of suicide, homicide or violence, the report is also submitted to the NC Division of Health Service Regulation (DHSR) Complaint Intake Unit for review. If there is an allegation of abuse, neglect or exploitation by an unlicensed staff member, the report is also submitted to DHSR Health Care Personnel Registry for investigation.

If the report is a Level II, the LME/MCOs review these incidents to assure that appropriate agencies were notified agencies (including the local Department of Social Services and law enforcement) and efforts toward reduction/elimination of further incidents. If the report is a Level III, the LME/MCO and our CSCR team review to assure appropriate notification of agencies (including the local Department of
Social Services and law enforcement), and any issues regarding health and safety are addressed as well as efforts toward reduction/elimination of further incidents.

**Quality Assurance/Quality Improvement**

**DMH/DD/SAS Internal QA/QI Structure**

Ultimate responsibility for a comprehensive and sustainable quality management program at the Division is delegated to the Division’s two Quality Committees. The Quality Committees are charged with the overall success of the Division’s quality management activities. It oversees all quality management responsibilities in the Division and serves as the hub receiving information and recommendations from the Quality Cross-Functional Committees and Special Initiatives/Projects, and it serves as the link to other DHHS quality initiatives.

To ensure the needs of those we serve are being met the Division monitors key indicators to help assure that the system is working as intended, opportunities for improvement are identified and acted upon, desired improvements are recognized and efforts to sustain successful practices are implemented and monitored to maintain achievements, as priorities change.

**LME/MCO QA/QI Monitoring**

- **The Administrative Function Indicators and standards are as follows:**
  - Percent of calls abandoned (Standard – 5% or less)
  - Percent of calls answered within 30 seconds (Standard – 95% or higher)
  - Percent of psychiatric inpatient readmits assigned to Care Coordination (Standard – 85% or higher)
  - Percent of routine authorization requests processed in 14 days (Standard – 95% or higher)
  - Percent of expedited authorization requests processed in 3 days (Standard – 95% or higher)
  - Percent of claims processed within 30 days (Standard – 90% or higher)
  - Percent of complaints resolved in 30 days (Standard – 90% or higher)

If an LME/MCO does not perform satisfactorily on any of the Administrative Function Indicators for three consecutive months, DHHS shall require the LME/MCO to submit a Plan of Correction within 30 days of notification and DMH/DD/SAS will provide technical assistance to the LME/MCO in the indicated area(s). Unsatisfactory performance is defined as not meeting the indicated standard.

- **Performance Measures are as follows:**
  - Timely Access to Emergent Care within 2 hrs.
  - Timely Access to Urgent Care within 2 days
  - Timely Access to Routine Care within 14 days
  - Emergency Dept. Visits with Primary MH/IDD/SUD Diagnosis
  - Emergency Dept. Readmissions within 30 days
  - Follow-Up After Discharge: Community Crisis Services within 3 days
  - Follow-Up After Discharge: State Psychiatric Hospitals w/in 7 days
  - State Psychiatric Hospital Readmissions within 30 days
  - Community MH Inpatient Readmissions within 30 days
  - Follow-Up After Discharge: Community Hospitals (MH) w/in 7 days
Follow-Up After Discharge: State ADATC within 7 days
State ADATC Readmissions within 30 days
Community SUD Inpatient Readmissions within 30 days
Follow-Up After Discharge: Community Hospitals (SUD) within 7 days

Performance Measures w/ Penalties - beginning January 1, 2018, the following measures have a performance standard and corresponding penalty for each standard not met:
Follow-Up After Discharge From Community Hospitals, State Psychiatric Hospitals, State ADATCs, and Detox/Facility Based Crisis Services For SUD Treatment
Follow-Up After Discharge From Community Hospitals, State Psychiatric Hospitals, and Facility Based Crisis Services For Mental Health Treatment
Number of Individuals Transitioned Into Supportive Housing (TCLI Population).

Additional Performance Measures are based on the 2012 Healthcare Effectiveness Data and Information Set (HEDIS). The HEDIS measures were created through the National Committee for Quality Assurance’s (NCQA) Committee on Performance Measurement. The performance measures will be reviewed in part by DHHS’s External Quality Review contractor for the 1915 (b)(c) Medicaid Waiver.
Penetration Rates:
Adult MH
Child MH
Adult SUD
Child SUD
Adult I/DD
Child I/DD
Initiation of Substance Abuse Disorder Services
Engagement in Substance Abuse Disorder Services
Initiation for Persons receiving Mental Health Services
Engagement for Persons Receiving Mental Health Services
Short Term Care in State Psychiatric Hospitals
Admission Rate and Length of Stay in Community Hospitals for Mental Health Treatment

Involvement of System Participants & Stakeholders in QA/QI
DMH/DD/SAS has a Quality Management staff that is embedded in the MH Planning Council. Annually DMH/DD/SAS Quality Management staff present on the following topics:
MH/SA Perception of Care Report
Quality Monitoring: NC-TOPPS
Gaps Analysis
Expenditures Reporting & Prevalence and Penetration Rates
LME-MCO Quality Improvement Projects and Network Development Plans

North Carolina- Treatment Outcomes and Program Performance System (NC-TOPPS)
North Carolina- Treatment Outcomes and Program Performance System (NC-TOPPS)
NC-TOPPS began as a pilot study funded through a 1997 federal Center for Substance Abuse Treatment (CSAT) grant. North Carolina was one of 14 States that received the CSAT grant. This initiative was a
partnership between the federal government and grantees to prepare States for development of a system to monitor and evaluate substance abuse treatment services. Based on information gathered during the pilot period lasting approximately two years, the State's Division of Mental Health, Developmental Disabilities and Substance Abuse (“the Division”) transitioned the pilot program into an on-going data collection, feedback and planning system. NC-TOPPS later became a statewide system. Assessment instruments were built on research findings and field practice. Individual assessment items were discussed and agreed upon by participating programs and State substance abuse services staff.

In the spring of 2004, the Division decided to expand the NC-TOPPS web-based data collection system into the mental health arena. A participatory, collaborative and consensus-building process, similar to the process used for substance abuse assessments, was established involving mental health providers, Local Management Entities, researchers and consumers to develop and improve measures for mental health. On July 1, 2005, NC-TOPPS became the statewide method of collecting information necessary for accountability, quality improvement and tracking outcomes for consumers of the State's substance abuse and mental health treatment services.

As a web-based system, NC-TOPPS today can be used on most laptops, tablets and cell phones. Through regular consumer-to-clinician interviews during an episode of care at months 1, 3, 6, 12, 18, 24, etc., NC-TOPPS captures information about an individual’s current situation, including such topics as symptoms, well-being, family and social relations, housing, employment, and legal system involvement. It also gathers consumers’ perspectives on the system, including barriers to treatment, choice of providers, timeliness of care, and involvement in treatment planning.

NC-TOPPS gives providers information to develop person-centered plans and track goal attainment. It gives Local Management Entities/Managed Care Organizations information to evaluate consumer needs and improve local service quality. Furthermore, it gives State decision-makers, NC residents, and the federal government information to help evaluate and improve the effectiveness of the service system.

Interview information provides one method for collection of the Division’s consumer functional outcomes data. Consumer functional outcomes data are the Division's source of information to monitor the impact of services. These data are also used to respond to departmental, legislative, and federal reporting requirements. NC-TOPPS accountability measures based on outcomes along with other performance measures are used for both the Community Mental Health Services Block Grant Program and the Substance Abuse Prevention and Treatment Block Grant Program reporting. In addition, the system provides data to meet SAMHSA’s reporting requirements for the National Outcome Measures (NOMs) and the Treatment Episode Data System (TEDS) data as requested.

The NC-TOPPS system provides information on outcomes and program performance that can be used to improve service delivery and, ultimately, the quality of life for people with mental health and substance abuse needs who are served in the public service system.

  - NC-TOPPS Login: https://nctopps.ncdmh.net/Nctopps2/Login.aspx
  - Public Dashboard: https://nctopps.ncdmh.net/ProviderQuery/Index.aspx
  - Website: https://www.ncdhhs.gov/providers/provider-info/mental-health/nc-treatment-outcomes-and-program-performance-system
Planning Steps

Step 2: Identify the unmet service needs and critical gaps within the current system.

Narrative Question:
This step should identify the unmet service needs and gaps in the state’s current M/SUD system as well as the data sources used to identify the needs and gaps of the required populations relevant to each block grant within the state’s M/SUD system. Especially for those required populations described in this document and other populations identified by the state as a priority. This step should also address how the state plans to meet the unmet service needs and gaps.

A data-driven process must support the state’s priorities and goals. This could include data and information that are available through the state’s unique data system (including community-level data), as well as SAMHSA’s data sets including, but not limited to, the National Survey on Drug Use and Health (NSDUH), the Treatment Episode Data Set (TEDS), the National Facilities Surveys on Drug Abuse and Mental Health Services, and the Uniform Reporting System (URS). Those states that have a State Epidemiological and Outcomes Workgroup (SEOW) should describe its composition and contribution to the process for primary prevention and treatment planning. States should also continue to use the prevalence formulas for adults with SMI and children with SED, as well as the prevalence estimates, epidemiological analyses, and profiles to establish mental health treatment, substance use disorder prevention, and SUD treatment goals at the state level. In addition, states should obtain and include in their data sources information from other state agencies that provide or purchase M/SUD services. This will allow states to have a more comprehensive approach to identifying the number of individuals that are receiving services and the types of services they are receiving.

In addition to in-state data, SAMHSA has identified several other data sets that are available to states through various federal agencies: CMS, the Agency for Healthcare Research and Quality (AHRQ), and others.

Through the Healthy People Initiative HHS has identified a broad set of indicators and goals to track and improve the nation’s health. By using the indicators included in Healthy People, states can focus their efforts on priority issues, support consistency in measurement, and use indicators that are being tracked at a national level, enabling better comparability. States should consider this resource in their planning.

Footnotes:
Step 2: Identify the unmet service needs and critical gaps within the current system.

Responses to Criterion 2: Mental Health System Data Epidemiology (Estimate of Prevalence and Quantitative Targets) and Criterion 4 (Targeted Services to Rural and Homeless, and Older populations) and Criterion 5: Management Systems are included in our identification of unmet service needs and critical gaps within the current service system. Our primary data sources are the Uniform Reporting System (URS) tables required for the CMHS Block Grant, our paid claims data base for federal and state funds, the Client Data Warehouse (CDW), and the web-based NC Treatment and Outcomes Performance System (NC TOPPS). Local Management Entities/Managed Care Organizations and service providers provide information on client level demographic characteristics, claims for services, and clinical outcomes to the state data systems cited above.

Estimate of Prevalence and Quantitative Targets. Adults with serious mental illness (SMI) and children and youth with serious mental disorders (SED) constitute the populations of focus of the Community Mental Health Services Block Grant. The Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMHDDSAS) uses prevalence estimates for adults with SMI and children with SED determined by the Federal Government and that are adjusted for state poverty thresholds by the National Research Institute (NRI) of the National Association of State Mental Health Directors (NASMHD) State Data Infrastructure Coordinating Center for the Center of Mental Health Services. According to their most recent data published September 2018, in NC 5.4 percent of the state’s adult population and 12.0 percent of children and youth have a diagnosable mental health disorder that meets the Diagnostic and Statistical Manual of Mental Disorders (DSM) criteria accompanied by serious role impairment that has lasted for at least twelve months and puts the individual at risk for out-of-home placement.

With a population estimate of 10,524,548 residents for 2019, North Carolina has the ninth largest population among 50 states, ranking 13th in population change between 2010-2018 (https://www.census.gov/data/tables/time-series/popest/2010s-national-total.html). Adults make up about 77.9 percent (8,203,778) of the total population of which approximately 443,004 have serious mental illness based on the SMI prevalence estimate of 5.4 percent. Children and youth make up almost a quarter (22.1%) of the population. Based on the prevalence estimate (12%) for the state, North Carolina had a total of 278,492 children and youth with SED in 2019 (population: NC Office of State Budget and Management (NC OSBM), State Demographer’s Office, https://www.osbm.nc.gov/demog/county-projections; prevalence: NRI September 2018 data).

Unmet service needs and critical gaps. The SMHA served a total of 101,046 individuals diagnosed with psychiatric disorders in community-based settings in SFY 2018 (https://www.samhsa.gov/data/sites/default/files/cbhsq-reports/NorthCarolina-2018.pdf). A total of 64,201 adults met the criteria for SMI and 1,785 children met the criteria for SED. Thus, the state treated only 14.5 percent of the 443,004 adult North Carolinians estimated to have SMI and only 0.6 percent of the 278,492 NC children and youth estimated to have SED.
**Older populations.** The NC OSBM estimates that nearly 26 percent of North Carolina’s population will be over age 60 by the year 2030, an increase of almost 61 percent from 2012. Of the state’s residents, 35.7 percent are now 50 or older, 22.6 percent are 60 or older, 11.1 percent are 70 or older, and 3.7 percent are 80 or older (https://www.osbm.nc.gov/demog/county-projections). The proportion of North Carolina’s population that is 60 and older is growing more rapidly than other components of the population. By 2035 NC OSBM projects there will be more older adults (ages 65 and older) than there will be children (under age 18).

Older groups are largely underrepresented among adults served through DMHDDSAS. Individuals 65 and over comprise about 16.5 percent of the 2019 population (https://www.osbm.nc.gov/demog/county-projections); however, only 2.2 percent of individuals served through the public mental health system were in this age group (https://www.samhsa.gov/data/sites/default/files/cbhsq-reports/NorthCarolina-2018.pdf). DMHDDSAS currently funds Geriatric Adult Mental Health Specialty Teams to increase the ability of people with mental illness to live successfully in their communities. The team consists minimally of a therapist and a registered nurse, both with experience working with the population. The team provides training and consultation to staff working in adult care homes, home health care agencies, and senior centers as well as community organizations and program staff that support older adults with mental illness to remain in their community.

DMHDDSAS and the Division of Aging and Adult Services (DAAS) co-lead the NC Mental Health and Aging Coalition, the mission of which is to focus on the mental health needs and substance use of older adults, build community capacity, and support advocacy and action. In the past year, SAMHSA and the Administration on Aging sponsored a Regional Policy Academy focused on the issues and challenges around behavioral health for older adults. The NC Team that attended the academy consisted of professionals from DMHDDSAS, DAAS, and DMA who together developed a plan to bring awareness and education to community partners to begin conversations to address issues related to suicide, depression/anxiety, alcohol, and prescription and other drug use and misuse among older adults. DMHDDSAS has included a Peer Support Specialist Certificate opportunity to engage older adults in recovery from mental health issues to provide peer support and mentoring to their cohorts.

**Rural populations.** The Community Mental Health Services Block Grant provides services to adults with serious mental illness and co-occurring disorders and to children with
serious emotional disorders and co-occurring disorders who live in rural areas where close to one-fifth (19.2%) of the state’s residents reside. The state has typically served a greater proportion of the population in rural areas. For instance, in SFY2018 the State Mental Health Agency (SMHA) delivered mental health services to 362 adults per 10,000 and 267 children or youth per 10,000 population residing in rural counties compared to 240 adults per 10,000 and 136 children and youth per 10,000 population residing in metropolitan areas. (population: https://www.osbm.nc.gov/demog/county-projections, Oct 2017; urban/rural delineation: https://www.census.gov/geographies/reference-files/time-series/demo/metro-micro-delineation-files.html, Aug 2017) DMHDDSAS, in collaboration with the Medicaid agency, the Office of Rural Health and Community Care, and the Local Management Entities/Managed Care Organizations, have engaged in several efforts to increase access to mental health and substance abuse services throughout the state. These include the expansion of telepsychiatry services, walk-in centers, and mobile crisis teams. DMHDDSAS further has an ongoing contract with the School of Nursing in the University of North Carolina at Chapel Hill to provide tuition-assistance to psychiatric mental health nurse practitioners graduate students.

In return for the funding, the students agree to find employment to serve consumers in underserved areas of the state. Recruitment and training of rural mental health professionals is also being addressed as part of the state’s current workforce initiative.

**Homeless populations.** The NC Coalition to End Homelessness, a statewide non-profit organization, holds a point-in-time count of the homeless over a 24-hour period in the last week of January each year. Results for the 2018 count showed 9268 people living in sheltered (emergency, seasonal, or transitional) and unsheltered settings, a decrease of 1415 from the previous year. Of the homeless adults, 1594 had serious mental illness while 2039 had substance use disorder.

About 10 percent of homeless adults were veterans. Projects for Assistance in Transition from Homelessness (PATH), a federal grant program administered by the state, provides outreach to individuals who are homeless and who have mental illness or co-occurring mental and substance abuse disorders.

**Needs of the military and veterans.** In 2008 the Rand Center for Military Health and Policy Research published “Invisible Wounds of War: Psychological and Cognitive Injuries, Their Consequences, and Services to Assist Recovery” that focused on post-traumatic stress disorder, major depression, and traumatic brain injury as the invisible wounds service men and women incurred because of war. The monograph included a report from a telephone survey of 1,695 individuals who had been previously-deployed in Operations Enduring Freedom and Iraqi Freedom (OEF/OIF) that found mental and cognitive problems in about a third of the respondents with 11.1 percent having a mental health condition only (PTSD or depression, no TBI), 7.3 percent having a mental health condition combined with TBI, and 12.2 percent, having
TBI only. PTSD, depression and TBI have immediate and long-term consequences for the individual, society, and the economy. And yet, close to 60 per cent of those with TBI had not been evaluated for their injury and only about 53 percent of those with PTSD or depression had gone to doctor or clinician for help. Confidentiality, availability of providers, and lack of evidence-based practices were cited as the most common barriers to treatment (http://www.rand.org/content/dam/rand/pubs/monographs/2008/RAND_MG720.pdf).

North Carolina is home to a large number of active military, National Guard and Reserves, veterans, and military families, ranking third in the country on this criterion. In a recent study, the NC Institute of Medicine noted that 35% of North Carolinians have some relationship to the military. The number of reserve component members in the state sum up to 22,000. A total of 116,000 are in the active military, while a total of 766,000 are veterans, and 190,896 are dependents of service members. Forty-three percent of service member families include children and youth. Based on the estimates of 14 percent for PTSD, 14 percent for major depression and 18.5 percent for TBI established in the Rand study cited above, 107,240 would have PTSD, another 107,240 would have major depression and 141,710 would have TBI among the veteran population alone.

DMHDDSAS serves the needs of the military primarily through the NC Focus on Service Members, Veterans, and their Families, a project that it supports. NC Focus promotes evidence-based and best practices in the screening, assessment, and treatment of active duty, National Guard, reservists, and veterans who served in the military and their families.

Race/Ethnic Disparities. Blacks or African Americans are over-represented in the mental health public service delivery system, more so among children and youth than adults. Black or African American individuals constitute 22.1 percent of the North Carolina population and 31.9% of individuals served by the SMHA. Conversely, the Hispanic or Latino population currently constitutes 10.8 percent of the total
population of North Carolinians and 4.3% of individuals served by the SMHA. North Carolina has one of the highest growth rates in Hispanic or Latino population in the nation. The growth of Hispanics or Latinos highlights a need for service providers to examine barriers that residents who are Hispanic may encounter when seeking services. Many LME/MCOs and service providers are attempting to hire Spanish speaking staff, but others still rely on using interpreters when providing services.

In summary, the CMHS Block Grant will continue to provide services to the populations identified by statute who continue to need services. The grant will focus on serving (a) children and youth with Serious Emotional Disorders (SED) and their families and (b) adults with serious mental illnesses (SMI). It will also continue its focus on priority populations with or at risk for SED and SMI to which it is currently providing services using state and/or federal funds. The state priority groups are the following:

- For mental health
  - those who are deaf and hard of hearing
  - those who are homeless
  - military veterans and their families
- Co-occurring disorders
  - Children and youth with co-occurring disorders
  - Adults with co-occurring disorders

DMHDDSAS has submitted a grant application to SAMHSA for the SOC Expansion Planning Grant that will highlight the needs of American Indians/Alaska Natives, Hispanics or Latinos, military personnel (active, guard, and reserve and their families, LGBT (Lesbian, Gay, Bisexual, and Transgendered) populations and other un- or underserved populations, including the elderly).

DMHDDSAS, Local Management Entities, the NC Mental Health Planning and Advisory Council, Consumer and Family Advisory Committees, the NC Institute of Medicine task forces, and advocacy groups conducted surveys in 2010 to determine unmet service gaps and priorities in the public mental health and substance use service delivery system, the results of which fall into six themes that provided direction to the identification of unmet needs and the prioritization of planning activities. The themes are:

- **Long Term Supports for Independence and Recovery**, including
emergency services, affordable medications, primary healthcare, housing, employment, and other supports for community living.

- **Quality and Accountability**, including comprehensive assessments, the use of evidence-based practices, performance tracking, and efficient data systems.

- **Workforce Development**, including provider trainings in core and specialty areas, especially from consumers’ and families’ perspectives, and residency rotations in mental health, substance abuse and developmental disabilities.

- **Expansion of Services**, particularly for rural areas, trauma-informed care, dual disability services, and community inpatient services.

- **Services for Vulnerable Populations**, including people who are deaf and hard of hearing, people undergoing transitions, very young children and their families, women and girls, youth who are at high risk, people who are homeless, people with justice system involvement and people with chronic illnesses.

- **Leadership and System Management**, including State and local disability-specific specialists, interagency collaboration and cooperation, use of effective funding policies, and support for consumers’ participation in policy decisions.

<tr>
<td>Priority Area:</td>
<td>Community Integration</td>
</tr>
<tr>
<td>Priority Type:</td>
<td>MHS</td>
</tr>
<tr>
<td>Population(s):</td>
<td>SMI, SED</td>
</tr>
</tbody>
</table>

Goal of the priority area:

1) Increase access to community based services
2) reduce need for inpatient care
3) Partner with people with mental health and co-occurring disorders to provide direction to the public service delivery system at the systemic and individual levels and to participate and guide treatment.

Objective:

Adults with serious mental illness, children and youth with serious emotional disorders, and people with substance use disorders and co-occurring disorders can develop their full potential if they live with freedom and dignity in the least restrictive setting and in the community of their choice.

Strategies to attain the objective:

1) Enhance community based services, strengthen system of care for children with SED and co-occurring disorders and their families, ensure post discharge planning.
2) Planning efforts will focus on increasing the representation of consumers ad their families in decision making bodies and the participation of consumers and their families in treatment planning.

**Priority #:** 2
**Priority Area:** Recovery Support Services
**Priority Type:** MHS
**Population(s):** SMI

**Goal of the priority area:**
To assist adults who have mental health and/or substance use problems, and children with SED and co-occurring disorders and their families to have a safe and stable home in a safe neighborhood, to have meaningful work, and to be a contributing member of society.
Objective:
Adults with serious mental illness, children and youth with serious emotional disorders, and people with substance use disorders and co-occurring disorders recover from the symptoms of mental illness and/or substance use is supported by a strong body of empirical evidence. Recovery support means partnering with people who have mental health and/or substance problems to provide direction to the public delivery system at the systemic and individual levels. SAMHSA has identified four elements—health, home, purpose, and community—that are essential to recovery. To facilitate and sustain recovery, people with mental illness and substance use disorders need to have services and supports to be healthy, to have a safe home in a safe neighborhood, to have meaningful work, and to be a contributing member of society.

Strategies to attain the objective:
Strengthening and developing supported employment, supportive housing, peer supports, and recovery specialists, transition, maintenance, and aftercare services that people with mental health, substance use problems, and/or co-occurring disorders need to maintain their recovery and develop resiliency.

Payments made to service providers for publicly funded community based mental health services

Data issues/caveats that affect outcome measures:

---

Priority #: 3
Priority Area: Primary and Behavioral Health Integrated Health Care
Priority Type: MHS
Population(s): SMI, SED

Goal of the priority area:
To address the primary health care needs of adults with SMI and children with SED

Objective:
People with mental illness have morbidity rates that are higher than those of the general public. Their lifespan is also considerably shorter. Analyses of the NC Mental Health Statistics Improvement Program (MHSIP) perception of care surveys that now include health questions show higher prevalence of asthma, diabetes, and cardiovascular disorders among individuals with psychotic and substance use disorders compared to the general populations as measured by the NC Behavioral Risk Factors Surveillance Surveys. The focus of planning activities for this priority will be two pronged: (1) Treatment-where individuals with mental health and substance use disorders are treated are treated for chronic illness and where people with chronic illness are treated for mental health and substance use disorders; and (2) prevention- where healthy lifestyles are promoted and the effects of medication are monitored for their physical and other side effects.

Strategies to attain the objective:
Support the promotion of healthy lifestyles and manage chronic conditions common to adults with SMI and children with SED.

---

Annual Performance Indicators to measure goal success

### Priority # 5

**Priority Area:** Services to juveniles with SED and adults with SMI who are involved with the Juvenile and Criminal Justice System

**Priority Type:** MHS

**Population(s):** SMI, SED

**Goal of the priority area:**

Address the needs of people with mental disorders, substance use disorders, co-occurring disorders, or a history of trauma in the criminal and juvenile justice system.

**Objective:**

Studies show that youth with SED and adults with SMI and people with co-occurring disorders are at high risk for involvement with the law. There is a need to increase the availability of access to and effectiveness of community-based interventions and treatment for people who are involved with the criminal justice system so that they do not end up in correctional facilities.

**Strategies to attain the objective:**

Continue collaboration and planning activities with the Department of Corrections and Administrative Office of the Courts to improve services and maximize the use of resources for justice involved people with mental health problems.

### Priority # 6

**Priority Area:** Trauma Informed Care and other Evidence Based Services

**Priority Type:** MHS

**Population(s):** SMI, SED

**Goal of the priority area:**

Address the needs of people with mental disorders, substance use disorders, co-occurring disorders, or a history of trauma in the criminal and juvenile justice system.
To increase the use of Evidence Based Practices

Objective:

Trauma is widespread, harmful, and costly public health problem. It occurs as a result of violence, abuse, neglect, loss, disaster, war and other harmful experiences. Trauma has no boundaries with regard to age, gender, socioeconomic status, race, ethnicity, geography, or sexual orientation. It is an almost universal experience of children, youth, and adults receiving treatment for mental health disorders. The need to address trauma is increasingly viewed as an important component of effective behavioral health service delivery.

Research shows that adults with mental illness and children with SED recover better if evidence based practices are used in their treatment.

Strategies to attain the objective:

Promoting training on trauma specific interventions and other evidence based practices.

Description of Data: Payments made to service providers for publicly funded community based mental health services.

Data issues/caveats that affect outcome measures::

Indicator #3

Indicator: Porportion of youth consumers with Therapeutic Foster Care

Baseline Measurement: At total of 3000 youth with SED will receive TFC

First-year target/outcome measurement: At least 3050 youth with SED will receive TFC.

Second-year target/outcome measurement: At least 3100 youth with SED will receive TFC.

Environmental Factors and Plan

1. The Health Care System, Parity and Integration - Question 1 and 2 are Required

Narrative Question

Persons with mental illness and persons with substance use disorders are likely to die earlier than those who do not have these conditions. Early mortality is associated with broader health disparities and health equity issues such as socioeconomic status but "[h]ealth system factors" such as access to care also play an important role in morbidity and mortality among these populations. Persons with mental illness and substance use disorders may benefit from strategies to control weight, encourage exercise, and properly treat such chronic health conditions as diabetes and cardiovascular disease. It has been acknowledged that there is a high rate of co-occurring M/SUD, with appropriate treatment required for both conditions.

Currently, 50 states have organizationally consolidated their mental and substance use disorder authorities in one fashion or another with additional organizational changes under consideration. More broadly, SAMHSA and its federal partners understand that such factors as education, housing, and nutrition strongly affect the overall health and well-being of persons with mental illness and substance use disorders. SMHAs and SSAs may wish to develop and support partnerships and programs to help address social determinants of health and advance overall health equity. For instance, some organizations have established medical-legal partnerships to assist persons with mental and substance use disorders in meeting their housing, employment, and education needs. Health care professionals and persons who access M/SUD treatment services recognize the need for improved coordination of care and integration of physical and M/SUD with other health care in primary, specialty, emergency and rehabilitative care settings in the community. For instance, the National Alliance for Mental Illness has published materials for members to assist them in coordinating pediatric mental health and primary care.

SAMHSA and its partners support integrated care for persons with mental illness and substance use disorders. The state should illustrate movement towards integrated systems of care for individuals and families with co-occurring mental and substance use disorders. The plan should describe attention to management, funding, payment strategies that foster co-occurring capability for services to individuals and families with co-occurring mental and substance use disorders. Strategies supported by SAMHSA to foster integration of physical and M/SUD include: developing models for inclusion of M/SUD treatment in primary care; supporting innovative payment and financing strategies and delivery system reforms such as ACOs, health homes, pay for performance, etc.; promoting workforce recruitment, retention and training efforts; improving understanding of financial sustainability and billing requirements; encouraging collaboration between M/SUD providers, prevention of teen pregnancy, youth violence, Medicaid programs, and primary care providers such as Federally Qualified Health Centers; and sharing with consumers information about the full range of health and wellness programs.

Health information technology, including EHRs and telehealth are examples of important strategies to promote integrated care. Use of EHRs - in full compliance with applicable legal requirements - may allow providers to share information, coordinate care, and improve billing practices. Telehealth is another important tool that may allow M/SUD prevention, treatment, and recovery to be conveniently provided in a variety of settings, helping to expand access, improve efficiency, save time, and reduce costs. Development and use of models for coordinated, integrated care such as those found in health homes and ACOs may be important strategies used by SMHAs and SSAs to foster integrated care. Training and assisting M/SUD providers to redesign or implement new provider billing practices, build capacity for third-party contract negotiations, collaborate with health clinics and other organizations and provider networks, and coordinate benefits among multiple funding sources may be important ways to foster integrated care. SAMHSA encourages SMHAs and SSAs to communicate frequently with stakeholders, including policymakers at the state/jurisdictional and local levels, and State Mental Health Planning Council members and consumers, about efforts to foster health care coverage, access and integrate care to ensure beneficial outcomes.

SMHAs and SSAs also may work with state Medicaid agencies, state insurance commissioners, and professional organizations to encourage development of innovative demonstration projects, alternative payment methodologies, and waivers/state plan amendments that test approaches to providing integrated care for persons with M/SUD and other vulnerable populations. Ensuring both Medicaid and private insurers provide required preventive benefits also may be an area for collaboration. One key population of concern is persons who are dually eligible for Medicare and Medicaid. Roughly, 30 percent of persons who are dually eligible have been diagnosed with a mental illness, more than three times the rate among those who are not dually eligible. SMHAs and SSAs also should collaborate with state Medicaid agencies and state insurance commissioners to develop policies to assist those individuals who experience health insurance coverage eligibility changes due to shifts in income and employment. Moreover, even with expanded health coverage available through the Marketplace and Medicaid and efforts to ensure parity in health care coverage, persons with M/SUD conditions still may experience challenges in some areas in obtaining care for a particular condition or in finding a provider. SMHAs and SSAs should remain cognizant that health disparities may affect access, health care coverage and integrated care of M/SUD conditions and work with
partners to mitigate regional and local variations in services that detrimentally affect access to care and integration. SMHAs and SSAs should work with partners to ensure recruitment of diverse, well-trained staff and promote workforce development and ability to function in an integrated care environment. Psychiatrists, psychologists, social workers, addiction counselors, preventionists, therapists, technicians, peer support specialists, and others will need to understand integrated care models, concepts, and practices.

Parity is vital to ensuring persons with mental health conditions and substance use disorders receive continuous, coordinated, care. Increasing public awareness about MHPAEA could increase access to M/SUD services, provide financial benefits to individuals and families, and lead to reduced confusion and discrimination associated with mental illness and substance use disorders. Block grant recipients should continue to monitor federal parity regulations and guidance and collaborate with state Medicaid authorities, insurance regulators, insurers, employers, providers, consumers and policymakers to ensure effective parity implementation and comprehensive, consistent communication with stakeholders. The SSAs, SMHAs and their partners may wish to pursue strategies to provide information, education, and technical assistance on parity-related issues. Medicaid programs will be a key partner for recipients of MHBG and SABG funds and providers supported by these funds. The SSAs and SMHAs should collaborate with their states’ Medicaid authority in ensuring parity within Medicaid programs.

SAMHSA encourages states to take proactive steps to improve consumer knowledge about parity. As one plan of action, states can develop communication plans to provide and address key issues. Another key part of integration will be defining performance and outcome measures. The Department of Health and Human Services (HHS) and partners have developed the National Quality Strategy, which includes information and resources to help promote health, good outcomes, and patient engagement. SAMHSA’s National Behavioral Health Quality Framework includes core measures that may be used by providers and payers.

SAMHSA recognizes that certain jurisdictions receiving block grant funds - including U.S. Territories, tribal entities and those jurisdictions that have signed a Compact of Free Association with the United States and are uniquely impacted by certain Medicaid provisions or are ineligible to participate in certain programs. However, these jurisdictions should collaborate with federal agencies and their governmental and non-governmental partners to expand access and coverage. Furthermore, the jurisdiction should ensure integration of prevention, treatment, and recovery support for persons with, or at risk of, mental and substance use disorders.

---

26 http://www.samhsa.gov/health-disparities/strategic-initiatives

Please respond to the following items in order to provide a description of the healthcare system and integration activities:

1. Describe how the state integrates mental health and primary health care, including services for individuals with co-occurring mental and substance use disorders, in primary care settings or arrangements to provide primary and specialty care services in community-based mental and substance use disorders settings.

The SAMHSA-HRSA framework conceptualizes physical and behavioral health integration as a continuum of six levels within three categories: coordinated care, co-located care, and integrated practice structures. In coordinated care, collaboration can be described as minimal, where patients are merely referred to another setting (level 1) or basic where primary and behavioral health care providers share and communicate with each other about them (level 2). In co-located care, providers serve patients in the same site with regular communication about their shared patients, but have different treatment plans for their patients (level 3). Level 4 of co-located care has a closer collaboration between providers with records shared between them. The levels of integrated care are characterized by close collaboration (Level 5) for shared patients, but separate treatment plans still exist for some patients. Full collaboration occurs in Level 6, for all patients; both types of providers develop the treatment plan at this level (https://www.integration.samhsa.gov/financing).

Integrated activities in the state can be found at all levels. In 2009, then Governor Perdue identified integrated behavioral health care as a priority in her administration and indicated the establishment of a “medical home” as an essential component of an effective mental health system citing Community Care of North Carolina (CCNC) as a model. In 2010, the state Medicaid agency - the Division of Medical Assistance (DMA) - approved the establishment of the Behavioral Health Initiative (BHI) to support the integration of primary and behavioral health care in 1,400 primary care practices serving more than a million Medicaid patients. Medicaid-eligible patients with mild to moderate behavioral health problems are served in the primary care practices that have been identified as their medical homes by medical providers who have been trained in the use of brief intervention techniques and motivational interviewing while those with more severe and persistent problems are referred to specialty clinics for behavioral health services. CCNC has developed a sophisticated system that allows the sharing of records by both primary and behavioral health care providers to facilitate care coordination. It further has an informatics system that uses performance measurement and feedback to improve quality of care while controlling costs. The Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMHDDSAS) – the SMHA and SSA – closely collaborate with CCNC for the coordinated treatment of individuals with the most severe and persistent mental health disorders.

Providers awarded funding by federal agencies such as SAMHSA and HRSA and by private local institutions such as the Kate B. Reynolds Charitable Trust and Duke Endowment offer integrated care through the co-location of a medical provider at a specialty clinic or a behavioral health care provider at a medical facility. For instance, the recently-concluded SAMHSA-funded NC Screening, Brief Intervention, and Referral (SBIRT) funded a licensed clinician (often dually-licensed for mental health and chemical addiction) to screen and provide brief intervention and treatment to patients coming in for their annual health visit who met the threshold...
for risky alcohol and drug use. Carr Mill Clinic, a behavioral health care provider has a primary care family physician on its staff funded by a grant from the Duke Endowment. Some schools and community centers also practice integrated care through the co-location of primary and behavioral health care providers.

The state aspires towards the full integration of primary and behavioral health care for individuals with mental health and substance use disorders (Level 6). But for the most part, most integrated activities still occur at the basic level of integration (Level 2). Clinics or practices that have received funding for integrated care have advanced to higher levels where collaboration and care coordination are more developed.

2. Describe how the state provide services and supports towards integrated systems of care for individuals and families with co-occurring mental and substance use disorders, including management, funding, payment strategies that foster co-occurring capability.

The state provides services and supports towards integrated care for individuals and families with co-occurring mental and substance use disorders through federal funds (i.e., Medicaid, Block Grant, and Discretionary Grants) and state funds. Clinical Coverage Policy 8-C requires that all comprehensive clinical assessments include information on an individual’s chronological general and medical health history and current issues, as well as current medications for physical conditions. These assessment requirements are applicable for all consumers and adherence is reviewed and monitored annually through block grant monitoring reviews. Additionally, Evaluation and Management codes have been approved by the Division that allow for various levels and types of health screening for many years.

North Carolina recently completed a no cost extension for its Certified Community Behavioral Health Clinic (CCBHC) grant. Although we were not selected as a demonstration site, over 60 provider agencies submitted requests to participate in the certification process. As stated in the first response, many demonstrated implementation of a number of physical health component screenings as part of their intake process.

3. a) Is there a plan for monitoring whether individuals and families have access to M/SUD services offered through QHPs?  
   b) and Medicaid?  

4. Who is responsible for monitoring access to M/SUD services by the QHP?

LME/MCO Network

5. Is the SSA/SMHA involved in any coordinated care initiatives in the state?  

6. Do the M/SUD providers screen and refer for:

   a) Prevention and wellness education  
   b) Health risks such as
      ii) heart disease  
      iii) hypertension  
      iv) high cholesterol  
      v) diabetes  
   c) Recovery supports  

7. Is the SSA/SMHA involved in the development of alternative payment methodologies, including risk-based contractual relationships that advance coordination of care?  

8. Is the SSA and SMHA involved in the implementation and enforcement of parity protections for mental and substance use disorder services?  

9. What are the issues or problems that your state is facing related to the implementation and enforcement of parity provisions?  

In 2015, Mental Health America published a report “Parity or Disparity: The State of Mental Health in America” that ranked states on the basis of the prevalence of mental illness and access to care with higher rankings indicating lower prevalence and higher access to care. North Carolina ranked as 18th in the country (with a ranking of 11th for adult and 30th for youth).

The major issues or problems related to the implementation and enforcement of parity provisions that the state is facing are related to (1) the deficit of providers for mental health, substance use, and co-occurring disorders in the state, (2) the absence or inadequacy of information about parity provisions, and (3) the stigma related to mental health and substance use disorders that prevent many people from seeking treatment or help for their problems.

10. Does the state have any activities related to this section that you would like to highlight?  

The state has a number if innovative integrated care projects. Integrated care is one of the priorities of the 115 demonstration program.

Please indicate areas of technical assistance needed related to this section
Development of payment models or reimbursement for integrated care.
Environmental Factors and Plan

2. Health Disparities - Requested

Narrative Question

In accordance with the HHS Action Plan to Reduce Racial and Ethnic Health Disparities, Healthy People, 2020, National Stakeholder Strategy for Achieving Health Equity, and other HHS and federal policy recommendations, SAMHSA expects block grant dollars to support equity in access, services provided, and M/SUD outcomes among individuals of all cultures, sexual/gender minorities, orientation and ethnicities. Accordingly, grantees should collect and use data to: (1) identify subpopulations (i.e., racial, ethnic, limited English speaking, tribal, sexual/gender minority groups, etc.) vulnerable to health disparities and (2) implement strategies to decrease the disparities in access, service use, and outcomes both within those subpopulations and in comparison to the general population. One strategy for addressing health disparities is use of the recently revised National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care (CLAS).

The Action Plan to Reduce Racial and Ethnic Health Disparities, which the HHS Secretary released in April 2011, outlines goals and actions that HHS agencies, including SAMHSA, will take to reduce health disparities among racial and ethnic minorities. Agencies are required to assess the impact of their policies and programs on health disparities.

The HHS Secretary’s top priority in the Action Plan is to “assess and heighten the impact of all HHS policies, programs, processes, and resource decisions to reduce health disparities. HHS leadership will assure that program grantees, as applicable, will be required to submit health disparity impact statements as part of their grant applications. Such statements can inform future HHS investments and policy goals, and in some instances, could be used to score grant applications if underlying program authority permits.”

Collecting appropriate data is a critical part of efforts to reduce health disparities and promote equity. In October 2011, HHS issued final standards on the collection of race, ethnicity, primary language, and disability status. This guidance conforms to the existing Office of Management and Budget (OMB) directive on racial/ethnic categories with the expansion of intra-group, detailed data for the Latino and the Asian-American/Pacific Islander populations. In addition, SAMHSA and all other HHS agencies have updated their limited English proficiency plans and, accordingly, will expect block grant dollars to support a reduction in disparities related to access, service use, and outcomes that are associated with limited English proficiency. These three departmental initiatives, along with SAMHSA’s and HHS’s attention to special service needs and disparities within tribal populations, LGBTQ populations, and women and girls, provide the foundation for addressing health disparities in the service delivery system. States provide M/SUD services to these individuals with state block grant dollars. While the block grant generally requires the use of evidence-based and promising practices, it is important to note that many of these practices have not been normed on various diverse racial and ethnic populations. States should strive to implement evidence-based and promising practices in a manner that meets the needs of the populations they serve.

In the block grant application, states define the populations they intend to serve. Within these populations of focus are subpopulations that may have disparate access to, use of, or outcomes from provided services. These disparities may be the result of differences in insurance coverage, language, beliefs, norms, values, and/or socioeconomic factors specific to that subpopulation. For instance, lack of Spanish primary care services may contribute to a heightened risk for metabolic disorders among Latino adults with SMI; and American Indian/Alaska Native youth may have an increased incidence of underage binge drinking due to coping patterns related to historical trauma within the American Indian/Alaska Native community. While these factors might not be pervasive among the general population served by the block grant, they may be predominant among subpopulations or groups vulnerable to disparities.

To address and ultimately reduce disparities, it is important for states to have a detailed understanding of who is and is not being served within the community, including in what languages, in order to implement appropriate outreach and engagement strategies for diverse populations. The types of services provided, retention in services, and outcomes are critical measures of quality and outcomes of care for diverse groups. For states to address the potentially disparate impact of their block grant funded efforts, they will address access, use, and outcomes for subpopulations.

44 https://www.minorityhealth.hhs.gov/npa/files/Plans/NSS/NSS_07_Section3.pdf

45 http://www.ThinkCulturalHealth.hhs.gov
Please respond to the following items:

1. Does the state track access or enrollment in services, types of services received and outcomes of these services by: race, ethnicity, gender, sexual orientation, gender identity, and age?
   - Race: [ ] Yes [ ] No
   - Ethnicity: [ ] Yes [ ] No
   - Gender: [ ] Yes [ ] No
   - Sexual orientation: [ ] Yes [ ] No
   - Gender identity: [ ] Yes [ ] No
   - Age: [ ] Yes [ ] No

2. Does the state have a data-driven plan to address and reduce disparities in access, service use and outcomes for the above sub-population?
   - [ ] Yes [ ] No

3. Does the state have a plan to identify, address and monitor linguistic disparities/language barriers?
   - [ ] Yes [ ] No

4. Does the state have a workforce-training plan to build the capacity of M/SUD providers to identify disparities in access, services received, and outcomes and provide support for improved culturally and linguistically competent outreach, engagement, prevention, treatment, and recovery services for diverse populations?
   - [ ] Yes [ ] No

5. If yes, does this plan include the Culturally and Linguistically Appropriate Services (CLAS) Standards?
   - [ ] Yes [ ] No

6. Does the state have a budget item allocated to identifying and remediating disparities in M/SUD care?
   - [ ] Yes [ ] No

7. Does the state have any activities related to this section that you would like to highlight?
   - Please indicate areas of technical assistance needed related to this section

Footnotes:

Environmental Factors and Plan

3. Innovation in Purchasing Decisions - Requested

Narrative Question
While there are different ways to define value-based purchasing, its purpose is to identify services, payment arrangements, incentives, and players that can be included in directed strategies using purchasing practices that are aimed at improving the value of health care services. In short, health care value is a function of both cost and quality:

Health Care Value = Quality ÷ Cost, \( V = Q ÷ C \)

SAMHSA anticipates that the movement toward value based purchasing will continue as delivery system reforms continue to shape states systems. The identification and replication of such value-based strategies and structures will be important to the development of M/SUD systems and services.

There is increased interest in having a better understanding of the evidence that supports the delivery of medical and specialty care including M/SUD services. Over the past several years, SAMHSA has collaborated with CMS, HRSA, SMAs, state M/SUD authorities, legislators, and others regarding the evidence of various mental and substance misuse prevention, treatment, and recovery support services. States and other purchasers are requesting information on evidence-based practices or other procedures that result in better health outcomes for individuals and the general population. While the emphasis on evidence-based practices will continue, there is a need to develop and create new interventions and technologies and in turn, to establish the evidence. SAMHSA supports states’ use of the block grants for this purpose. The NQF and the IOM recommend that evidence play a critical role in designing health benefits for individuals enrolled in commercial insurance, Medicaid, and Medicare.

To respond to these inquiries and recommendations, SAMHSA has undertaken several activities. SAMHSA’s Evidence Based Practices Resource Center assesses the research evaluating an intervention’s impact on outcomes and provides information on available resources to facilitate the effective dissemination and implementation of the program. SAMHSA’s Evidence-Based Practices Resource Center provides the information & tools needed to incorporate evidence-based practices into communities or clinical settings.

SAMHSA reviewed and analyzed the current evidence for a wide range of interventions for individuals with mental illness and substance use disorders, including youth and adults with chronic addiction disorders, adults with SMI, and children and youth with SED. The evidence builds on the evidence and consensus standards that have been developed in many national reports over the last decade or more. These include reports by the Surgeon General,\(^{49}\) The New Freedom Commission on Mental Health,\(^{50}\) the IOM,\(^{51}\) NQF, and the Interdepartmental Serious Mental Illness Coordinating Committee (ISMICC).\(^{52}\) The activity included a systematic assessment of the current research findings for the effectiveness of the services using a strict set of evidentiary standards. This series of assessments was published in “Psychiatry Online.”\(^{53}\) SAMHSA and other federal partners, the HHS’ Administration for Children and Families, Office for Civil Rights, and CMS, have used this information to sponsor technical expert panels that provide specific recommendations to the M/SUD field regarding what the evidence indicates works and for whom, to identify specific strategies for embedding these practices in provider organizations, and to recommend additional service research.

In addition to evidence-based practices, there are also many promising practices in various stages of development. Anecdotal evidence and program data indicate effectiveness for these services. As these practices continue to be evaluated, the evidence is collected to establish their efficacy and to advance the knowledge of the field.

SAMHSA’s Treatment Improvement Protocol Series (TIPS)\(^{54}\) are best practice guidelines for the SUD treatment. SAMHSA draws on the experience and knowledge of clinical, research, and administrative experts to produce the TIPS, which are distributed to a growing number of facilities and individuals across the country. The audience for the TIPS is expanding beyond public and private SUD treatment facilities as alcohol and other drug disorders are increasingly recognized as a major health problem.

SAMHSA’s Evidence-Based Practice Knowledge Informing Transformation (KIT)\(^{55}\) was developed to help move the latest information available on effective M/SUD practices into community-based service delivery. States, communities, administrators, practitioners, consumers of mental health care, and their family members can use KIT to design and implement M/SUD practices that work. KIT covers getting started, building the program, training frontline staff, and evaluating the program. The KITs contain information sheets, introductory videos, practice demonstration videos, and training manuals. Each KIT outlines the essential components of the evidence-based practice and provides suggestions collected from those who have successfully implemented them.
SAMHSA is interested in whether and how states are using evidence in their purchasing decisions, educating policymakers, or supporting providers to offer high quality services. In addition, SAMHSA is concerned with what additional information is needed by SMHAs and SSAs in their efforts to continue to shape their and other purchasers' decisions regarding M/SUD services.

Please respond to the following items:

1. Is information used regarding evidence-based or promising practices in your purchasing or policy decisions?  
   - Yes  
   - No

2. Which value based purchasing strategies do you use in your state (check all that apply):
   - Leadership support, including investment of human and financial resources.
   - Use of available and credible data to identify better quality and monitored the impact of quality improvement interventions.
   - Use of financial and non-financial incentives for providers or consumers.
   - Provider involvement in planning value-based purchasing.
   - Use of accurate and reliable measures of quality in payment arrangements.
   - Quality measures focus on consumer outcomes rather than care processes.
   - Involvement in CMS or commercial insurance value based purchasing programs (health homes, ACO, all payer/global payments, pay for performance (P4P)).
   - The state has an evaluation plan to assess the impact of its purchasing decisions.

3. Does the state have any activities related to this section that you would like to highlight?
   Please indicate areas of technical assistance needed related to this section.

Environmental Factors and Plan

4. Evidence-Based Practices for Early Interventions to Address Early Serious Mental Illness (ESMI) - 10 percent set aside - Required MHBG

Narrative Question

Much of the mental health treatment and recovery service efforts are focused on the later stages of illness, intervening only when things have reached the level of a crisis. While this kind of treatment is critical, it is also costly in terms of increased financial burdens for public mental health systems, lost economic productivity, and the toll taken on individuals and families. There are growing concerns among consumers and family members that the mental health system needs to do more when people first experience these conditions to prevent long-term adverse consequences. Early intervention* is critical to treating mental illness before it can cause tragic results like serious impairment, unemployment, homelessness, poverty, and suicide. The duration of untreated mental illness, defined as the time interval between the onset of a mental disorder and when an individual gets into treatment, has been a predictor of outcomes across different mental illnesses. Evidence indicates that a prolonged duration of untreated mental illness may be viewed as a negative prognostic factor for those who are diagnosed with mental illness. Earlier treatment and interventions not only reduce acute symptoms, but may also improve long-term prognosis.

SAMHSA's working definition of an Early Serious Mental Illness is "An early serious mental illness or ESMI is a condition that affects an individual regardless of their age and that is a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within DSM-5 (APA, 2013). For a significant portion of the time since the onset of the disturbance, the individual has not achieved or is at risk for not achieving the expected level of interpersonal, academic or occupational functioning. This definition is not intended to include conditions that are attributable to the physiologic effects of a substance use disorder, are attributable to an intellectual/developmental disorder or are attributable to another medical condition. The term ESMI is intended for the initial period of onset."

States may implement models that have demonstrated efficacy, including the range of services and principles identified by National Institute of Mental Health (NIMH) via its Recovery After an Initial Schizophrenia Episode (RAISE) initiative. Utilizing these principles, regardless of the amount of investment, and by leveraging funds through inclusion of services reimbursed by Medicaid or private insurance, states should move their system to address the needs of individuals with a first episode of psychosis (FEP). RAISE was a set of NIMH sponsored studies beginning in 2008, focusing on the early identification and provision of evidence-based treatments to persons experiencing FEP. The NIMH RAISE studies, as well as similar early intervention programs tested worldwide, consist of multiple evidence-based treatment components used in tandem as part of a Coordinated Specialty Care (CSC) model, and have been shown to improve symptoms, reduce relapse, and lead to better outcomes.

State shall expend not less than 10 percent of the MHBG amount the State receives for carrying out this section for each fiscal year to support evidence-based programs that address the needs of individuals with early serious mental illness, including psychotic disorders, regardless of the age of the individual at onset. In lieu of expending 10 percent of the amount the State receives under this section for a fiscal year as required a state may elect to expend not less than 20 percent of such amount by the end of such succeeding fiscal year.

* MHBG funds cannot be used for primary prevention activities. States cannot use MHBG funds for prodromal symptoms (specific group of symptoms that may precede the onset and diagnosis of a mental illness) and/or those who are not diagnosed with a SMI.

Please respond to the following items:

1. Does the state have policies for addressing early serious mental illness (ESMI)?
   - Yes
   - No

2. Has the state implemented any evidence-based practices (EBPs) for those with ESMI?
   - Yes
   - No

   If yes, please list the EBPs and provide a description of the programs that the state currently funds to implement evidence-based practices for those with ESMI.

   North Carolina is currently providing services through the Coordinated Specialty Care (CSC) Program – NAVIGATE model.

   North Carolina currently allocates funds for 3 CSC sites. Two sites have been in operation since 2015. A third site was funded in January 2017 and will begin to accept clients in July 2017.

   • Funds are allocated to Alliance Behavioral Healthcare MCO for a contract with the University of North Carolina Department of Psychiatry, Center of Excellence for a program in Raleigh, North Carolina
   • Funds are allocated to Trillium Health Resources MCO for a contract with RHA, Inc. for a program in Wilmington, North Carolina
   • Funds are allocated to Cardinal Innovations Healthcare Solutions for a contract with Carolinas Healthcare System for a program in Charlotte, North Carolina

3. How does the state promote the use of evidence-based practices for individuals with ESMI and provide comprehensive individualized treatment or integrated mental and physical health services?
CSC Programs in North Carolina bill Medicaid for covered services and are required to meet all Medicaid Billing requirements. This includes development of individualized person centered plans.

A focus of CSC services at all sites is personal recovery from the patient’s perspective.

All three funded sites use the database developed by the NC EPI-TA program for data collection that provides individual client and aggregate data. The outcome database questions used by all programs reflect the process of recovery framed in the biomedical model (reductions in symptoms, improved social and vocational functions), the person model (social connectedness, hope, identity, meaningful life, empowerment), and the impact on others (resource utilization, disability, family). The questions are meant to be clinically meaningful and to be utilized as part of routine clinical practice. The patient self-report measures are meant to be reviewed during a patient visits and the information used to guide the intervention in real time. Patients self report on symptoms at each visit. A program Satisfaction Survey is completed quarterly. Shared decision making is recognized as a key component of medical management of complex disorders. After medical provider visits patients rate the quality of the interaction with ColloRATER, a 3 item rating scale. Therapists complete a questionnaire on vocational function, arrests and housing. Medical Providers review the patient self-report of symptoms and evaluate symptom severity during their routine mental status exam. Data on metabolic risk factors including height, weight, blood pressure, HGA1c 9 diabetes screen and lipid panel is collected on a quarterly basis.

In addition to providing funding for three CSC sites, funding is provided to NC-EPI-TA program through the University of North Carolina at Chapel Hill Department of Psychiatry to provide technical assistance, consultation, training, database management and fidelity monitoring.

The NC-EPI-TA program provides services to the three sites and is also available for consultation to other providers in North Carolina who are interested in learning more about FEP and evidenced based practices.

The NC-EPI-TA program provides on-going webinars aimed to enhance clinician early recognition of early psychosis in their clinical practice. These webinars are produced through the Area Health Education Centers (AHEC) in North Carolina.

Announcements of trainings and webinars provided through SAMHSA, National Institute of Mental Health (NIMH), National Association of State Mental Health Directors (NASMHPD) and the Prodrome and Early Psychosis Program Network (PEPPNET) are disseminated to providers and the primary staff at the LME/MCOs for the three funded sites.

4. Does the state coordinate across public and private sector entities to coordinate treatment and recovery supports for those with ESMI?  
   Yes  No

5. Does the state collect data specifically related to ESMI?  
   Yes  No

6. Does the state provide trainings to increase capacity of providers to deliver interventions related to ESMI?  
   Yes  No

7. Please provide an updated description of the state’s chosen EBPs for the 10 percent set-aside for ESMI.

   As noted in question #2, North Carolina is currently providing services through the Coordinated Specialty Care (CSC) Program – NAVIGATE model. NAVIGATE is a comprehensive team based approach designed to provide early and effective treatment to individuals who have experienced a first episode of psychosis. The NAVIGATE CSC treatment model was developed by the RAISE Early Treatment Program and was one of two CSC models tested as part of the RAISE research study.

   In addition to the required functions which include assertive outreach and engagement, medication management, family therapy and education, individual therapy, supportive employment and education and case management, North Carolina requires that each CSC site include a Peer Support Specialist as part of the team. Peer support has been found to be a valuable component for CSC programs.

8. Please describe the planned activities for FFY 2020 and FFY 2021 for your state’s ESMI programs including psychosis?

   North Carolina plans to continue to implement the following CSC sites:
   • Alliance Behavioral Healthcare MCO for a contract with the University Of North Carolina Department Of Psychiatry, Center of Excellence for the Wake OASIS program located in Raleigh, North Carolina.
   • Trillium Health Resources MCO for a contract with RHA, Inc. for the SHORE program located in Wilmington, North Carolina
   • Cardinal Innovations Healthcare Solutions for a contract with Carolinas Healthcare System for the Eagle program located in Charlotte, North Carolina

   In addition to the three CSC sites, North Carolina contracts directly with the University Of North Carolina Department Of Psychiatry for the North Carolina EPI –TA program for database development and management, technical assistance, clinical consultation and fidelity monitoring. Specific activities of this program are outlined in question #s3 and 6.

   The Fidelity Monitoring Tool has been reviewed with all sites but this will be the first year that the EPI-TA program will rate the programs using the tool. Following a review the results will be discussed with each site and feedback solicited on both the usefulness of the tool and the process. The review will identify areas that need to be addressed by the programs and additional technical assistance needed that is specific to their site.

9. Please explain the state’s provision for collecting and reporting data, demonstrating the impact of the 10 percent set-aside for ESMI.

   The NC EPI-TA program developed and maintains the database base for all CSC programs. Measure selection for EPI-NC assessment is based on 1) clinical utility and administrative utility, 2) reliability and validity, and 3) feasibility. Measure selection was to a large extent influenced by the expert consensus panel organized by a collaboration between NIMH and the PhenX project. Please refer
to question #3 for an overview of the database. Specific measures include:

Measure Rationale for Measure Clinical Utility/Administrative Utility
Mental Health Statistics Improvement Program (MHSIP) Consumer Survey sections:
- Educational Status
- Current employment
- Current school
- Arrests
- Substance use
- Program satisfaction The Center for Mental Health Services (part of SAMHSA) requires the MHSIP for grant-funded programs, as a national benchmark. We collect data for all of the domains covered in the MHSIP. We use the MHSIP sections listed (to the left), modified to collect information on social interactions via electronic communications as well as in-person. • Social and vocational function are explicit targets of early intervention programs, as part of the biomedical model of recovery.
- Arrests are an expensive aspect of service utilization and thus are important to the State.
- Substance use may be a barrier to recovery.
- Program satisfaction includes the patient’s sense of whether program staff have a collaborative stance, are culturally sensitive, whether there were financial barriers to care, and overall program satisfaction. These are important to program administrators.
Colorado Symptom Index Measures patient self-report of symptoms including mood, delusions, hallucinations, thought process, suicidal and homicidal thoughts. Self-reported reduction in symptom frequency is relevant to the biomedical model of recovery.
Questionnaire about the Process of Recovery This scale was developed as a collaboration between persons with psychosis, their clinicians, and researchers to evaluate key aspects of recovery: connectedness, hope, identity, meaning, and empowerment. Measures interpersonal aspects of recovery from psychosis.
ColloboRATE Evaluates medical provider’s use of shared decision making approach, shown to enhance engagement. Patient report, 3-items that ask about their perception of the medical provider’s collaborative stance.
Brief Psychiatric Rating Scale This is collected by the medical provider, and covers key target symptoms including mood, delusions, and hallucinations, thought process, suicidal and homicidal thoughts. Clinician-rated symptom severity may differ from self-report, and is relevant to the biomedical model of recovery.

10. Please list the diagnostic categories identified for your state’s ESMI programs.
CSC Programs in North Carolina serve individuals ages 15-30 who have a diagnosis of schizophrenia spectrum illness and other psychotic disorders who have experienced a first episode of psychosis within 3 years since the onset of the psychotic illness. The following individuals are excluded:
- Individuals diagnosed with a pervasive developmental disorder or autism spectrum disorder
- Individual with an IQ of less than 70
- Individual diagnosed with an organic brain disorder
- Individual whose psychosis is secondary to substance use.

Please indicate areas of technical assistance needed related to this section.

We have the challenge of the uncertainty in the amount of funding available through the set-a-side from year to year. Sustainability of the program is an on-going issue.

OMB No. 0930-0168 Approved: 04/19/2019 Expires: 04/30/2022

Environmental Factors and Plan

5. Person Centered Planning (PCP) - Required MHBG

Narrative Question
States must engage adults with a serious mental illness or children with a serious emotional disturbance and their caregivers where appropriate in making health care decisions, including activities that enhance communication among individuals, families, caregivers, and treatment providers. Person-centered planning is a process through which individuals develop their plan of service. The PCP may include a representative who the person has freely chosen, and/or who is authorized to make personal or health decisions for the person. The PCP team may include family members, legal guardians, friends, caregivers and others that the person or his/her representative wishes to include. The PCP should involve the person receiving services and supports to the maximum extent possible, even if the person has a legal representative. The PCP approach identifies the person's strengths, goals, preferences, needs and desired outcome. The role of state and agency workers (for example, options counselors, support brokers, social workers, peer support workers, and others) in the PCP process is to enable and assist people to approach identifies the person's strengths, goals, preferences, needs and desired outcome. The role of state and agency workers (for example, options counselors, support brokers, social workers, peer support workers, and others) in the PCP process is to enable and assist people to identify and access a unique mix of paid and unpaid services to meet their needs and provide support during planning. The person's goals and preferences in areas such as recreation, transportation, friendships, therapies, home, employment, education, family relationships, and treatments are part of a written plan that is consistent with the person's needs and desires.

1. Does your state have policies related to person centered planning?  
   Yes  No

2. If no, describe any action steps planned by the state in developing PCP initiatives in the future.
   The NC Mental Health Planning and Advisory Council in their review of data has noted related trends in the perception of care survey that will be monitored for further study and recommendations.

3. Describe how the state engages consumers and their caregivers in making health care decisions, and enhance communication.
   Person centered planning is based on a variety of approaches, values, principles or “tools” to organize and guide community change and life planning with people with disabilities, their families and friends. All approaches or “tools” have distinct practices, but share common beliefs, taking into careful consideration legislative requirements, new priorities that have emerged, innovative approaches that are available, and evaluative information that has provided new direction for the planning process.

   For children, youth and families, the SOC framework, including family driven, youth guided practices and culturally and linguistically responsive practices, is the foundation upon which Child and Family Team planning is based for person centered planning. Training is offered across the state to families and providers on CFT planning from a family and youth perspective through the NC Collaborative for Children, Youth and Families. The LME SOC Coordinators and Family Partners help prepare and support families and youth in the planning process.

4. Describe the person-centered planning process in your state.
   Since the inception of the Person-Centered Plan (PCP) in 2006, the NC Division of Mental Health, Developmental Disabilities and Substance Abuse Services has supported and encouraged the utilization of person-centered planning and the professional development and growth of all people engaged in the process. Through ongoing evaluation of the PCP, the Division of MH/DD/SAS has monitored the achievement of objectives using quantifiable measures, assessed the effectiveness of particular interventions and policies, as well as monitored public opinion. Subsequently, the PCP format has been redeveloped over the last five years, Person centered planning is based on a variety of approaches, values, principles or “tools” to organize and guide community change and life planning with people with disabilities, their families and friends. All approaches or “tools” have distinct practices, but share common beliefs, taking into careful consideration legislative requirements, new priorities that have emerged, innovative approaches that are available, and evaluative information that has provided new direction for the planning process.

   The Person-Centered planning process supports strengths and recovery and applies to everyone supported and served in the North Carolina Mental Health, Developmental Disabilities and Substance Abuse system. Person-centered planning provides for the individual with or the family of a person with a disability assuming an informed and in-command role for life planning, service, support and treatment options. The person with a disability, and his/her family, or the legally responsible person directs the process and shares authority and responsibility with system professionals about decisions made.

   The policy of the NC Division of MH/DD/SAS is that the Person-Centered Plan (PCP) is the umbrella under which all planning for treatment, services and supports occurs. Person- centered planning begins with the identification of the reason the individual/family is requesting assistance. The plan focuses on the identification of the individual’s/family’s needs and desired life outcomes. This is not just a request for a specific service(s). The Qualified Professional responsible for the development of the PCP must assure that the plan captures all goals and objectives and outlines each team member’s responsibilities within the plan. This plan is based on what is most important to and for the individual/family as identified by the person/family to whom the plan belongs and the people who know and care about the person. This planning approach therefore supports good action and crisis planning. The plan captures long term and short term outcomes, goals and objectives, including detailed information regarding...
justification for continuation, modification or termination of a goal and it outlines each team members’ responsibilities within the plan.

For children, youth and families, Child and Family Team planning occurs in developing the person centered plan and often in developing the IEP and/or 504 plans for children eligible under IDEA.

Please indicate areas of technical assistance needed related to this section.

Integrating consumer, family, and youth, partnership and peer health navigators core SOC in a privatized managed care arena.

Environmental Factors and Plan

6. Program Integrity - Required

Narrative Question
SAMHSA has placed a strong emphasis on ensuring that block grant funds are expended in a manner consistent with the statutory and regulatory framework. This requires that SAMHSA and the states have a strong approach to assuring program integrity. Currently, the primary goals of SAMHSA program integrity efforts are to promote the proper expenditure of block grant funds, improve block grant program compliance nationally, and demonstrate the effective use of block grant funds.

While some states have indicated an interest in using block grant funds for individual co-pays deductibles and other types of co-insurance for M/SUD services, SAMHSA reminds states of restrictions on the use of block grant funds outlined in 42 U.S.C. §§ 300x-5 and 300x-31, including cash payments to intended recipients of health services and providing financial assistance to any entity other than a public or nonprofit private entity. Under 42 U.S.C. § 300x-55(g), SAMHSA periodically conducts site visits to MHBG and SABG grantees to evaluate program and fiscal management. States will need to develop specific policies and procedures for assuring compliance with the funding requirements. Since MHBG funds can only be used for authorized services made available to adults with SMI and children with SED and SABG funds can only be used for individuals with or at risk for SUD. SAMHSA guidance on the use of block grant funding for co-pays, deductibles, and premiums can be found at: http://www.samhsa.gov/sites/default/files/grants/guidance-for-block-grant-funds-for-cost-sharing-assistance-for-private-health-insurance.pdf. States are encouraged to review the guidance and request any needed technical assistance to assure the appropriate use of such funds.

The MHBG and SABG resources are to be used to support, not supplant, services that will be covered through the private and public insurance. In addition, SAMHSA will work with CMS and states to identify strategies for sharing data, protocols, and information to assist our program integrity efforts. Data collection, analysis, and reporting will help to ensure that MHBG and SABG funds are allocated to support evidence-based, culturally competent programs, substance use disorder prevention, treatment and recovery programs, and activities for adults with SMI and children with SED.

States traditionally have employed a variety of strategies to procure and pay for M/SUD services funded by the MHBG and SABG. State systems for procurement, contract management, financial reporting, and audit vary significantly. These strategies may include: (1) appropriately directing complaints and appeals requests to ensure that QHPs and Medicaid programs are including essential health benefits (EHBs) as per the state benchmark plan; (2) ensuring that individuals are aware of the covered M/SUD benefits; (3) ensuring that consumers of M/SUD services have full confidence in the confidentiality of their medical information; and (4) monitoring the use of M/SUD benefits in light of utilization review, medical necessity, etc. Consequently, states may have to become more proactive in ensuring that state-funded providers are enrolled in the Medicaid program and have the ability to determine if clients are enrolled or eligible to enroll in Medicaid. Additionally, compliance review and audit protocols may need to be revised to provide for increased tests of client eligibility and enrollment.

Please respond to the following items:

1. Does the state have a specific policy and/or procedure for assuring that the federal program requirements are conveyed to intermediaries and providers?  
   - Yes ☐  No ☑

2. Does the state provide technical assistance to providers in adopting practices that promote compliance with program requirements, including quality and safety standards?  
   - Yes ☐  No ☑

3. Does the state have any activities related to this section that you would like to highlight?  
   - Yes ☐  No ☑

   The Program Integrity procedures for NC Division of Mental Health, Developmental Disabilities and Substance Abuse Services (DMH/DD/SAS) are incorporated into the Service System Integrity plan. It is the purpose of the Service System Integrity Plan to support compliance, proper expenditure and accountability within DMH/DD/SAS programs by ensuring that State and Block Grant dollars are utilized appropriately, in accordance with statutory and regulatory framework, and in support of programmatic goals. The Service System Integrity Plan promotes the following principles:

   1. Promote a cost efficient and effective behavioral health care system.
   2. Ensure adherence to statutory and regulatory standards and practices.
   3. Develop and monitor communication methods, training and technical assistance regarding service system integrity.
   4. Support appropriate strategies and approaches to carrying out effective Service System Integrity efforts.
   5. Proactively recognize areas of risk that may adversely affect Service System Integrity and proactively address vulnerabilities.
   6. Fair and reasonable enforcement of system integrity monitoring. Failure to comply with system integrity efforts may result in technical assistance, plans of correction or other actions.

Please indicate areas of technical assistance needed related to this section  
N/A
Environmental Factors and Plan

7. Tribes - Requested

Narrative Question
The federal government has a unique obligation to help improve the health of American Indians and Alaska Natives through the various health and human services programs administered by HHS. Treaties, federal legislation, regulations, executive orders, and Presidential memoranda support and define the relationship of the federal government with federally recognized tribes, which is derived from the political and legal relationship that Indian tribes have with the federal government and is not based upon race. SAMHSA is required by the 2009 Memorandum on Tribal Consultation to submit plans on how it will engage in regular and meaningful consultation and collaboration with tribal officials in the development of federal policies that have tribal implications.

Improving the health and well-being of tribal nations is contingent upon understanding their specific needs. Tribal consultation is an essential tool in achieving that understanding. Consultation is an enhanced form of communication, which emphasizes trust, respect, and shared responsibility. It is an open and free exchange of information and opinion among parties, which leads to mutual understanding and comprehension. Consultation is integral to a deliberative process that results in effective collaboration and informed decision-making with the ultimate goal of reaching consensus on issues.

In the context of the block grant funds awarded to tribes, SAMHSA views consultation as a government-to-government interaction and should be distinguished from input provided by individual tribal members or services provided for tribal members whether on or off tribal lands. Therefore, the interaction should be attended by elected officials of the tribe or their designees and by the highest possible state officials. As states administer health and human services programs that are supported with federal funding, it is imperative that they consult with tribes to ensure the programs meet the needs of the tribes in the state. In addition to general stakeholder consultation, states should establish, implement, and document a process for consultation with the federally recognized tribal governments located within or governing tribal lands within their borders to solicit their input during the block grant planning process. Evidence that these actions have been performed by the state should be reflected throughout the state’s plan. Additionally, it is important to note that approximately 70 percent of American Indians and Alaska Natives do not live on tribal lands. The SMHAs, SSAs and tribes should collaborate to ensure access and culturally competent care for all American Indians and Alaska Natives in the states.

States shall not require any tribe to waive its sovereign immunity in order to receive funds or for services to be provided for tribal members on tribal lands. If a state does not have any federally recognized tribal governments or tribal lands within its borders, the state should make a declarative statement to that effect.

56 https://www.energy.gov/sites/prod/files/Presidential%20Memorandum%20Tribal%20Consultation%20%282009%29.pdf

Please respond to the following items:

1. How many consultation sessions has the state conducted with federally recognized tribes?

2. What specific concerns were raised during the consultation session(s) noted above?

3. Does the state have any activities related to this section that you would like to highlight?

Please indicate areas of technical assistance needed related to this section.

OMB No. 0930-0168 Approved: 04/19/2019 Expires: 04/30/2022

Environmental Factors and Plan

9. Statutory Criterion for MHBG - Required for MHBG

Narrative Question

Criterion 1: Comprehensive Community-Based Mental Health Service Systems
Provides for the establishment and implementation of an organized community-based system of care for individuals with mental illness, including those with co-occurring mental and substance use disorders. Describes available services and resources within a comprehensive system of care, provided with federal, state, and other public and private resources, in order to enable such individual to function outside of inpatient or residential institutions to the maximum extent of their capabilities.

Please respond to the following items

Criterion 1

1. Describe available services and resources in order to enable individuals with mental illness, including those with co-occurring mental and substance use disorders to function outside of inpatient or residential institutions to the maximum extent of their capabilities.

The SMHA provides a comprehensive system of care to enable individuals that it serves to live in communities of their choice and avoid inpatient hospitalization and institutionalization to the greatest extent possible. The array of available services includes basic outpatient services (assessment, individual therapy, group therapy, family therapy), enhanced mental health and substance abuse services (community support team, intensive in-home outpatient therapy, comprehensive outpatient therapy, Substance Abuse Intensive Outpatient program, Substance Abuse Comprehensive Outpatient Treatment, Adolescent Day Treatment), opioid/medication assisted therapies, halfway house and supported housing services, Work First services and Treatment Accountability for Safer Communities (TASC) for people who have been in the correction system. In addition, mobile and walk-in crisis services, various levels of detoxification, residential, and inpatient treatment services are available throughout the state. The continuum of services further includes evidence-based practices that are in the state service definitions (specifications of the services that providers can be paid for with public funds) such as Therapeutic Foster Care, Multi-systemic Therapy, and Family Functional Therapy for children and youth and Assertive Community Treatment, Supported Housing, and Supported Employment for adults. Other evidence-based practices are offered under the intensive in-home services definition. For example, an ACT team may implement an integrated dual disorders treatment model to better serve individuals with co-occurring mental illness and addiction. Children and youth with complex co-occurring disorders have a reinforced network of supports for improved coordinated care that is currently under development. Seeking Safety or trauma-informed cognitive behavioral therapies may be utilized under the SAIOP or SACOT service definition for those individuals who have experienced trauma in their lives. Local Management Entities/Managed Care Organizations have also developed and implemented, with DMHDDSAS approval, alternate service definitions such as peer and recovery supports, transition services, wellness, and living skills) to create a more robust continuum of care. The SMHA further coordinates Crisis Intervention Programs (CIT) that provide law enforcement officials with skills that enable them to de-escalate crisis among people with mental illness to divert them from incarceration. Tele-health is currently being utilized in areas that have shortages of therapists and/or psychiatrists. Community Prevention Technical Assistance Resources funded through the Substance Abuse Prevention and Treatment Block Grant, recently funded Cures grant in May 2017 and the State’s Strategic Prevention Framework/State Incentive Grants, provide additional resources.

DMHDDSAS receives funds from the NC General Assembly for crisis services (mobile crisis teams, emergency department length of stay plan, walk-in crisis and psychiatric after-care, and crisis intervention teams) geared towards the reduction of hospitalization, the use of emergency department services, jail diversions among people with mental health and substance use disorders. These services are implemented by the DMHDDSAS in coordination with the LME/MCOs and community partners. In addition to contracting with the 7 LME/MCOs for the delivery of the service array from prevention, early intervention, treatment and recovery services and supports, the Division also contracts with several other entities to address needs and gaps within the system. Following are some examples of those contracts:

• Governor’s Institute on Substance Abuse – The primary objective of this contract is to increase access to and improve the quality of services provided in the state by: (1) expanding the use of evidence-based/best practices through the NC Practice Improvement Collaborative (NC PIC); (2) promoting the integration of behavioral healthcare with primary healthcare in two regions of North Carolina and the rest of the state; (3) improving physician understanding of addictions and mental illnesses; and (4) enhancing the quality of the workforce and provider agencies in the state, with a special emphasis on service members, veterans and their families. Both the Mental Health and Substance Abuse Block Grants support this work.

• NC State University, Center for Urban Affairs and Community Services – This contract provides for the management of the web-based Treatment and Outcomes Program Performance System (NC TOPPS) which allows Local Management Entities/Managed Care Organizations (LME/MCOs) and their contracted network service providers to submit initial, periodic updates and episode completion interview information for all consumers within specified substance abuse and mental health populations. Data entered into the system is then used in developing accountability measures for both the Mental Health and Substance Abuse Block Grants.

Printed: 8/30/2019 1:30 PM - North Carolina - OMB No. 0930-0168  Approved: 04/19/2019  Expires: 04/30/2022
2. Does your state coordinate the following services under comprehensive community-based mental health service systems?

<table>
<thead>
<tr>
<th>Service Type</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical Health</td>
<td>☐</td>
<td>☑</td>
</tr>
<tr>
<td>Mental Health</td>
<td>☐</td>
<td>☑</td>
</tr>
<tr>
<td>Rehabilitation services</td>
<td>☐</td>
<td>☑</td>
</tr>
<tr>
<td>Employment services</td>
<td>☐</td>
<td>☑</td>
</tr>
</tbody>
</table>
Please describe or clarify the services coordinated, as needed (for example, best practices, service needs, concerns, etc.)

An overview and examples are provided in #1, 3 and 4 in this section.

In addition, the North Carolina Department of Health and Human Services (DHHS) is developing a Strategic Plan for the community and facility-based service system. This Strategic Plan will be presented to the North Carolina General Assembly in January 2018. There is particular interest in the following areas:

- Access to providers and services
- Affordability of providers and services
- Special populations & conditions (Veterans, Traumatic Brain Injuries, Autism, etc.)
- Navigating the system
- Improving quality of care
- Integration of physical and behavioral health

3. Describe your state’s case management services

Currently seven Local Management Entities/Management Care Organizations provide care coordination for youth with special healthcare needs for the 100 counties of North Carolina. In addition, case management is embedded in residential and community based services. Intensive In-Home Services, day treatment, and Multi-Systemic Therapy all incorporate case management functions within each of these behavioral health clinical policy service definitions.

DMHDDSAS is piloting high fidelity wraparound with its intensive care coordination and family and youth peer support in four sites through a SAMHSA System of Care grant. In addition, DMHDDSAS is piloting high fidelity wraparound in one additional site with the intention of improved coordination between MCO care coordination for youth involved in juvenile justice and child welfare. This project is funded by the state legislature based on recommendations from a Governor’s Task Force on Mental Health and Substance Use Disorders. The goal of these pilots is to learn how to effectively roll-out intensive care coordination and family/youth peer support (high fidelity wraparound) in order to scale up high fidelity wraparound across the state.

4. Describe activities intended to reduce hospitalizations and hospital stays.

New clinical policy and service definitions for child facility based crisis services and state funding to start-up three child facility based crisis centers and state funded case management for adults in transitioning between care and community settings (a new pilot as a result of the 2016 Governor’s Task Force on Mental Health and Substance Abuse Services).

- Use of IVC designated behavioral health urgent care centers for children and adults.
- Current work with Division of Medical Assistance to revise the mobile crisis service definition to be more responsive to children, youth, and families. and more effective for adults.
- The above mentioned high fidelity wraparound pilots.
In order to complete column B of the table, please use the most recent SAMHSA prevalence estimate or other federal/state data that describes the populations of focus.

Column C requires that the state indicate the expected incidence rate of individuals with SMI/SED who may require services in the state’s M/SUD system.

MHBG Estimate of statewide prevalence and incidence rates of individuals with SMI/SED

<table>
<thead>
<tr>
<th>Target Population (A)</th>
<th>Statewide prevalence (B)</th>
<th>Statewide incidence (C)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Adults with SMI</td>
<td>424,005</td>
<td>121,054</td>
</tr>
<tr>
<td>2. Children with SED</td>
<td>233,648</td>
<td>17,031</td>
</tr>
</tbody>
</table>

Describe the process by which your state calculates prevalence and incidence rates and provide an explanation as to how this information is used for planning purposes. If your state does not calculate these rates, but obtains them from another source, please describe. If your state does not use prevalence and incidence rates for planning purposes, indicate how system planning occurs in their absence.

Data Source:
Population Data: NC Office of State Budget and Management (OSBM). Last updated: 10/8/15 Downloaded: 2/23/16

MH Prevalence Rates*: Prevalence rates for children with Serious Emotional Disturbance (SED) and adults with Serious Mental Illness (SMI) in North Carolina were prepared for the Center for Mental Health Services (CMHS) by the National Association of State Mental Health Program Directors Research Institute (NRI) State Data Infrastructure Coordinating Center (SDICC), November 2016, for the Mental Health Block Grant.

? Children: URS Table 1b: Number of Children with Serious Emotional Disturbance, ages 9-17, by State, 2015. Note: 12% is the midpoint (11%-13%) for the LOF=60 range (SED with substantial functional impairment). The same rate was applied to children under age 9.

? Adults: URS Table 1a: Number of Persons with Serious Mental Illness, age 18 and older, by State, 2015 = 5.4%

* The number of persons with any mental illness is higher. In Sep 2011 the CDC estimated that about 25% of adults in the US have a mental illness. According to the National Surveys on Drug Use and Health, 2013 and 2014, published 12/16/15, Table 24, Any Mental Illness in the Past Year, by Age Group and State, 18.29% of adults in the US and 19.33% of adults in NC ages 18+ had any mental illness in the past year. (http://www.samhsa.gov/data/sites/default/files/NSDUHsaePercents2014.pdf).

According to the Centers For Disease Control and Prevention (CDC), 13% – 20% of children living in the United States ages 3-17 experience a mental disorder in a given year, and surveillance during 1994 – 2011 has shown the prevalence of these conditions to be increasing. (Mental Health Surveillance Among Children — United States, 2005 – 2011, May 17, 2013) (http://www.cdc.gov/mmwr/preview/mmwrhtml/su6202a1.htm).

The Any MI percents in the table above represent the upper limit of these ranges for children and adults.

Early Childhood MH (ECMH) Prevalence: According to NCIOM, Growing Up Well: Supporting Young Children’s Social-Emotional Development and Mental Health in North Carolina (NCIOM, 2012), for early childhood, national research shows that between 10-14% of children ages 0-5 have mental health problems severe enough that they have trouble functioning. (http://www.nciom.org/wpcontent/uploads/2012/08/Chapter-11.pdf) The 12% in the table above represents the midpoint for this range.

Incidence (C) - informed by SFY16 URS Table 2B

Criterion 3

Provides for a system of integrated services in order for children to receive care for their multiple needs. Does your state integrate the following services into a comprehensive system of care?

a) Social Services

b) Educational services, including services provided under IDE

c) Juvenile justice services

d) Substance misuse prevention and SUD treatment services

e) Health and mental health services

f) Establishes defined geographic area for the provision of services of such system

Yes ☐ No ☐

Yes ☐ No ☐

Yes ☐ No ☐

Yes ☐ No ☐

Yes ☐ No ☐

Yes ☐ No ☐
a. Describe your state's targeted services to rural population.

Individuals living in rural communities have access to the NC Telepsychiatry Program with 30 current sites, 29 new sites in development, and 7 provider hubs.

b. Describe your state's targeted services to the homeless population.

The Projects for Assistance in Transition from Homelessness (PATH) is a federal grant providing a team of staff who provide outreach, engagement and case management services to adults with serious mental illness who are living outside or short term shelters. PATH Programs are located in Charlotte, Greensboro and Asheville and Raleigh. In FY2016, PATH Program staff provided 1737 individuals with outreach and enrolled 740 individuals.

c. Describe your state's targeted services to the older adult population.

The Geriatric Mental Health Teams (GAST) provide training and support to staff working at community agencies, organizations and facilities providing services to older adults with mental health and substance use disorders. The training consists of mental health and substance use disorders, symptoms, and how to provide person-centered/trauma informed services. The GAST staff have begun to reach out to homeless service providers due to the increase in older adults who have become homeless.
Describe your state’s management systems.

The Division of Mental Health/Developmental Disabilities/Substance Abuse Services sets up services through a sub-contract model. Seven Local Management Entities (LME/MCO) operate across the state and cover the needs of the consumers in the state’s one hundred counties. Funding for services can come from a couple sources including Federal funding (including the MHBG) and state dollars. These are provided to the LME/MCO direct allocations. The LME/MCO in turn will then contract with providers in their areas for services needed. The LME/MCO in contracting with DMH agrees to monitor the programs, evaluate the effectiveness of services, and ensure staff have the required credentials and training.

DMH/DD/SAS has two types of subrecipients – 1) the LME-MCOs (the local mental health authorities) and 2) non-profit organizations and other nongovernmental entities that are awarded financial assistance grants to carry out specific goals and objectives of the CMHSBG. Some of the activities funded by the CMHSBG focus on the advancement of evidence-based practices for individuals with SMI or SED through the provision of training, consultation and technical assistance; the provision of services to facilitate access to services with SMI or SED and their families; the collection of data and periodic interviews of consumers at various points in treatment from intake to the completion of services for National Outcomes Measures (NOMS) reporting; the provision of services to individuals that are deaf or hard-of-hearing; and technical assistance to the pilot sites that have implemented special programs for individuals experiencing a first episode psychosis.

Each year, a risk assessment is performed on each subrecipient to identify areas of vulnerability which might preclude the entity from meeting the compliance requirements of the grant. The level of risk determines the scope and intensity of monitoring. Both entities are monitored for compliance with the conditions of their contract. The LME-MCO liaisons and contract administrators have lead responsibility for ongoing programmatic monitoring of these entities. Such monitoring takes place via site visits, phone calls, e-mail communications, face-to-face meetings and a review of reports and data submitted by the subrecipient. Reports summarizing monitoring activities are submitted to the Policy and Audit Team each month as part of the division’s subrecipient monitoring process.

Programmatic monitoring of the LME-MCOs occurs on two levels. The division assigns a liaison to each LME-MCO. The liaison monitors operations in the LME-MCO and compliance with the requirements in the performance contract, including issues that might arise involving access to mental health services and/or provider issues. The division also conducts an annual systems review of the LME-MCO which includes the CMHSBG. This is an on-site review of the LME-MCO and the providers of CMHSBG-funded services. The review includes a program review as well as a record review and looks at compliance with such requirements as eligibility, appropriate release and disclosure of information, service recipient and family participation in the treatment planning process, the promotion and implementation of evidence-based treatment services through the provision of provider training and monitoring, outreach and assertive engagement activities to individuals experiencing a first episode psychoses and their families, the provision of coordinated specialty care, the availability of crisis services and the LME-MCO support and oversight of services provided to individuals experiencing a first episode psychosis. The LME-MCOs are notified of the results of the annual systems review. Any plans of correction that result from the systems review are coordinated by the Policy and Audit Team in consultation with the Mental Health Section.

DMH/DD/SAS fiscally monitors the use of MHGB funding by the LME/MCO in multiple ways. In real time, there is monthly monitoring of the budget to actual use of funding by account/service; quarterly monitoring which reconciles LME MCO claims and self-reported expense data against actual payments to network providers. Retroactively, an annual audit is completed which includes all MHGB funding. This audit confirms utilization of funding as well as appropriate documentation after the close of timely filing and the certification of the LME/MCOs independent audits. Technical assistance is provided to LME MCOs as well as providers in the service delivery network whenever there are questions, concerns or findings.
Environmental Factors and Plan

11. Quality Improvement Plan- Requested

Narrative Question
In previous block grant applications, SAMHSA asked states to base their administrative operations and service delivery on principles of Continuous Quality Improvement/Total Quality Management (CQI/TQM). These CQI processes should identify and track critical outcomes and performance measures, based on valid and reliable data, consistent with the NBHQF, which will describe the health and functioning of the mental health and addiction systems. The CQI processes should continuously measure the effectiveness of services and supports and ensure that they continue to reflect this evidence of effectiveness. The state’s CQI process should also track programmatic improvements using stakeholder input, including the general population and individuals in treatment and recovery and their families. In addition, the CQI plan should include a description of the process for responding to emergencies, critical incidents, complaints, and grievances.

Please respond to the following items:

1. Has your state modified its CQI plan from FFY 2018-FFY 2019?  
   ☐ Yes ☐ No

   Please indicate areas of technical assistance needed related to this section.

OMB No. 0930-0168 Approved: 04/19/2019 Expires: 04/30/2022

Footnotes:
Environmental Factors and Plan

12. Trauma - Requested

Narrative Question

Trauma 57 is a widespread, harmful, and costly public health problem. It occurs because of violence, abuse, neglect, loss, disaster, war and other emotionally harmful and/or life threatening experiences. Trauma has no boundaries with regard to age, gender, socioeconomic status, race, ethnicity, geography, or sexual orientation. It is an almost universal experience of people with mental and substance use difficulties. The need to address trauma is increasingly viewed as an important component of effective M/SUD service delivery. Additionally, it has become evident that addressing trauma requires a multi-pronged, multi-agency public health approach inclusive of public education and awareness, prevention and early identification, and effective trauma-specific assessment and treatment. To maximize the impact of these efforts, they need to be provided in an organizational or community context that is trauma-informed.

Individuals with experiences of trauma are found in multiple service sectors, not just in M/SUD services. People in the juvenile and criminal justice system have high rates of mental illness and substance use disorders and personal histories of trauma. Children and families in the child welfare system similarly experience high rates of trauma and associated M/SUD problems. Many patients in primary, specialty, emergency and rehabilitative health care similarly have significant trauma histories, which has an impact on their health and their responsiveness to health interventions. Schools are now recognizing that the impact of exposure to trauma and violence among their students makes it difficult to learn and meet academic goals. Communities and neighborhoods experience trauma and violence. For some these are rare events and for others these are daily events that children and families are forced to live with. These children and families remain especially vulnerable to trauma-related problems, often are in resource poor areas, and rarely seek or receive M/SUD care. States should work with these communities to identify interventions that best meet the needs of these residents.

In addition, the public institutions and service systems that are intended to provide services and supports for individuals are often re-traumatizing, making it necessary to rethink doing business as usual. These public institutions and service settings are increasingly adopting a trauma-informed approach. A trauma-informed approach is distinct from trauma-specific assessments and treatments. Rather, trauma-informed refers to creating an organizational culture or climate that realizes the widespread impact of trauma, recognizes the signs and symptoms of trauma in clients and staff, responds by integrating knowledge about trauma into policies and procedures, and seeks to actively resist re-traumatizing clients and staff. This approach is guided by key principles that promote safety, trustworthiness and transparency, peer support, empowerment, collaboration, and sensitivity to cultural and gender issues. A trauma-informed approach may incorporate trauma-specific screening, assessment, treatment, and recovery practices or refer individuals to these appropriate services.

It is suggested that states refer to SAMHSA's guidance for implementing the trauma-informed approach discussed in the Concept of Trauma 58 paper.

57 Definition of Trauma: Individual trauma results from an event, series of events, or set of circumstances that is experienced by an individual as physically or emotionally harmful or life threatening and that has lasting adverse effects on the individual's functioning and mental, physical, social, emotional, or spiritual well-being.

58 Ibid

Please consider the following items as a guide when preparing the description of the state’s system:

1. Does the state have a plan or policy for M/SUD providers that guide how they will address individuals with trauma-related issues? ○ Yes ○ No

2. Does the state provide information on trauma-specific assessment tools and interventions for M/SUD providers? ○ Yes ○ No

3. Does the state have a plan to build the capacity of M/SUD providers and organizations to implement a trauma-informed approach to care? ○ Yes ○ No

4. Does the state encourage employment of peers with lived experience of trauma in developing trauma-informed organizations? ○ Yes ○ No

5. Does the state have any activities related to this section that you would like to highlight.

Please indicate areas of technical assistance needed related to this section.

OMB No. 0930-0168 Approved: 04/19/2019 Expires: 04/30/2022

Environmental Factors and Plan

13. Criminal and Juvenile Justice - Requested

Narrative Question

More than half of all prison and jail inmates meet criteria for having mental health problems, six in ten meet criteria for a substance use problem, and more than one-third meet criteria for having co-occurring mental and substance use problems. Youth in the juvenile justice system often display a variety of high-risk characteristics that include inadequate family support, school failure, negative peer associations, and insufficient use of community-based services. Most adjudicated youth released from secure detention do not have community follow-up or supervision; therefore, risk factors remain unaddressed.59

Successful diversion of adults and youth from incarceration or re-entering the community from detention is often dependent on engaging in appropriate M/SUD treatment. Some states have implemented such efforts as mental health, veteran and drug courts, Crisis Intervention Training (CIT) and re-entry programs to help reduce arrests, imprisonment and recidivism.60

A diversion program places youth in an alternative program, rather than processing them in the juvenile justice system. States should place an emphasis on screening, assessment, and services provided prior to adjudication and/or sentencing to divert persons with M/SUD from correctional settings. States should also examine specific barriers such as a lack of identification needed for enrollment Medicaid and/or the Health Insurance Marketplace; loss of eligibility for Medicaid resulting from incarceration; and care coordination for individuals with chronic health conditions, housing instability, and employment challenges. Secure custody rates decline when community agencies are present to advocate for alternatives to detention.

The MHBG and SABG may be especially valuable in supporting care coordination to promote pre-adjudication or pre-sentencing diversion, providing care during gaps in enrollment after incarceration, and supporting other efforts related to enrollment.

Please respond to the following items

1. Does the state (SMHA and SSA) have a plan for coordinating with the criminal and juvenile justice systems on diversion of individuals with mental and/or substance use disorders from incarceration to community treatment, and for those incarcerated, a plan for re-entry into the community that includes connecting to M/SUD services? ○ Yes ○ No

2. Does the state have a plan for working with law enforcement to deploy emerging strategies (e.g. civil citations, mobile crisis intervention, M/SUD provider ride-along, CIT, linkage with treatment services, etc.) to reduce the number of individuals with mental and/or substance use problems in jails and emergency rooms? ○ Yes ○ No

3. Does the state provide cross-trainings for M/SUD providers and criminal/juvenile justice personnel to increase capacity for working with individuals with M/SUD issues involved in the justice system? ○ Yes ○ No

4. Does the state have an inter-agency coordinating committee or advisory board that addresses criminal and juvenile justice issues and that includes the SMHA, SSA, and other governmental and non-governmental entities to address M/SUD and other essential domains such as employment, education, and finances? ○ Yes ○ No

5. Does the state have any activities related to this section that you would like to highlight? Please indicate areas of technical assistance needed related to this section.

Environmental Factors and Plan

15. Crisis Services - Requested

Narrative Question

In the on-going development of efforts to build an robust system of evidence-based care for persons diagnosed with SMI, SED and SUD and their families via a coordinated continuum of treatments, services and supports, growing attention is being paid across the country to how states and local communities identify and effectively respond to, prevent, manage and help individuals, families, and communities recover from M/SUD crises. SAMHSA has recently released a publication, Crisis Services Effectiveness, Cost Effectiveness and Funding Strategies that states may find helpful.\(^1\) SAMHSA has taken a leadership role in deepening the understanding of what it means to be in crisis and how to respond to a crisis experienced by people with M/SUD conditions and their families. According to SAMHSA’s publication, Practice Guidelines: Core Elements for Responding to Mental Health Crises.\(^2\)

"Adults, children, and older adults with an SMI or emotional disorder often lead lives characterized by recurrent, significant crises. These crises are not the inevitable consequences of mental disability, but rather represent the combined impact of a host of additional factors, including lack of access to essential services and supports, poverty, unstable housing, coexisting substance use, other health problems, discrimination, and victimization."

A crisis response system will have the capacity to prevent, recognize, respond, de-escalate, and follow-up from crises across a continuum, from crisis planning, to early stages of support and respite, to crisis stabilization and intervention, to post-crisis follow-up and support for the individual and their family. SAMHSA expects that states will build on the emerging and growing body of evidence for effective community-based crisis-prevention and response systems. Given the multi-system involvement of many individuals with M/SUD issues, the crisis system approach provides the infrastructure to improve care coordination and outcomes, manage costs, and better invest resources. The following are an array of services and supports used to address crisis response.

Please check those that are used in your state:

1. Crisis Prevention and Early Intervention
   
   a) Wellness Recovery Action Plan (WRAP) Crisis Planning
   
   b) Psychiatric Advance Directives
   
   c) Family Engagement
   
   d) Safety Planning
   
   e) Peer-Operated Warm Lines
   
   f) Peer-Run Crisis Respite Programs
   
   g) Suicide Prevention

2. Crisis Intervention/Stabilization
   
   a) Assessment/Triage (Living Room Model)
   
   b) Open Dialogue
   
   c) Crisis Residential/Respite
   
   d) Crisis Intervention Team/Law Enforcement
   
   e) Mobile Crisis Outreach
   
   f) Collaboration with Hospital Emergency Departments and Urgent Care Systems

3. Post Crisis Intervention/Support
   
   a) Peer Support/Peer Bridgers
   
   b) Follow-up Outreach and Support
   
   c) Family-to-Family Engagement
   
   d) Connection to care coordination and follow-up clinical care for individuals in crisis
   
   e) Follow-up crisis engagement with families and involved community members

Environmental Factors and Plan

16. Recovery - Required

Narrative Question
The implementation of recovery supports and services are imperative for providing comprehensive, quality M/SUD care. The expansion in access to and coverage for health care compels SAMHSA to promote the availability, quality, and financing of vital services and support systems that facilitate recovery for individuals. Recovery encompasses the spectrum of individual needs related to those with mental disorders and/or substance use disorders. Recovery is supported through the key components of: health (access to quality health and M/SUD treatment); home (housing with needed supports), purpose (education, employment, and other pursuits); and community (peer, family, and other social supports). The principles of recovery guide the approach to person-centered care that is inclusive of shared decision-making. The continuum of care for these conditions includes psychiatric and psychosocial interventions to address acute episodes or recurrence of symptoms associated with an individual's mental or substance use disorder. Because mental and substance use disorders are chronic conditions, systems and services are necessary to facilitate the initiation, stabilization, and management of long-term recovery.

SAMHSA has developed the following working definition of recovery from mental and/or substance use disorders:

Recovery is a process of change through which individuals improve their health and wellness, live a self-directed life to the greatest extent possible, and strive to reach their full potential.

In addition, SAMHSA identified 10 guiding principles of recovery:

- Recovery emerges from hope;
- Recovery is person-driven;
- Recovery occurs via many pathways;
- Recovery is holistic;
- Recovery is supported by peers and allies;
- Recovery is supported through relationship and social networks;
- Recovery is culturally-based and influenced;
- Recovery is supported by addressing trauma;
- Recovery involves individuals, families, community strengths, and responsibility;
- Recovery is based on respect.

Please see [SAMHSA's Working Definition of Recovery from Mental Disorders and Substance Use Disorders](#).

States are strongly encouraged to consider ways to incorporate recovery support services, including peer-delivered services, into their continuum of care. Technical assistance and training on a variety of such services are available through the SAMHSA supported Technical Assistance and Training Centers in each region. SAMHSA strongly encourages states to take proactive steps to implement recovery support services. To accomplish this goal and support the wide-scale adoption of recovery supports in the areas of health, home, purpose, and community, SAMHSA has launched Bringing Recovery Supports to Scale Technical Assistance Center Strategy (BRSS TACS). BRSS TACS assists states and others to promote adoption of recovery-oriented supports, services, and systems for people in recovery from substance use and/or mental disorders.

Because recovery is based on the involvement of consumers/peers/people in recovery, their family members and caregivers, SMHAs and SSAs can engage these individuals, families, and caregivers in developing recovery-oriented systems and services. States should also support existing and create resources for new consumer, family, and youth networks; recovery community organizations and peer-run organizations; and advocacy organizations to ensure a recovery orientation and expand support networks and recovery services. States are strongly encouraged to engage individuals and families in developing, implementing and monitoring the state M/SUD treatment system.

Please respond to the following:

1. Does the state support recovery through any of the following:
2. Does the state measure the impact of your consumer and recovery community outreach activity?  

3. Provide a description of recovery and recovery support services for adults with SMI and children with SED in your state.

The State provides an expanding array of recovery-oriented, person-centered services available to adults with SMI/SPMI. Brief descriptions of these services are as follows:

**Assertive Community Treatment (ACT)** services consist of a community-based group of medical, behavioral health and rehabilitation professionals who use a team approach to meet the needs of an individual with SPMI. The ACT team addresses the breadth of an individual’s needs and teaches psychiatric rehabilitation skills towards advancing personal recovery goals. The Certified Peer Support Specialist is a vital role on the team in promoting hope and self-determination that the individual can recover and regain meaningful roles and relationships in the community.

**Community Support Team (CST)** services consist of community-based mental health and substance abuse rehabilitation services and supports provided through a team approach to assist adults in achieving rehabilitative and recovery goals. CST is a 24/7 service that is designed to reduce presenting psychiatric or substance abuse symptoms and promote symptom stability, restore the individual’s community living and interpersonal skills, provide first responder intervention and deescalate the current crisis, and ensure linkage to community services and resources.

Critical Time Intervention (CTI) is a time-limited, evidence-based practice that mobilizes support for the most vulnerable individuals during periods of transition. CTI promotes a focus on recovery and psychiatric rehabilitation, and bridges the gap between institutional living and community services by ensuring that a person has enduring ties to their community and support systems during these critical periods.

Peer Support Services (PSS), provided by Peer Support staff, offers structured and scheduled activities for adults with SMI or substance abuse disorders. Services focus on the acquisition, development, and expansion of rehabilitative skills needed to move forward in recovery. PSS emphasizes personal safety, self-worth, connection to the community, self-advocacy, personal fulfillment, and development of social supports and effective communication skills.

Focus on developing Family Partner Coordinators, Family Partners, Youth Partners and Young Adult Partners working as peers and self-advocacy is vital to sustaining the strength of the SOC platform and interagency work on the individual and family and in the community, regionally and state at large.

Individual Placement and Support- Supported Employment (IPS-SE) is an evidence-based practice that helps individuals with SMI work at regular jobs of their choosing. It is a person-centered, behavioral health service that assists in choosing, acquiring, and maintaining competitively paid employment in the community for individuals 16 years and older who are unemployed or who have intermittent or interrupted employment. Employment Peer Mentors offer hope and motivation by drawing from their lived experience and employment history to encourage individuals to seek and maintain employment, wellness, and community integration.

Transition Management Services (TMS) is a service provided to individuals participating in the Transition to Community Living Initiative (TCLI), and was formerly called Tenancy Support Team (TST). TMS focuses on increasing the individual’s ability to live as independently as possible, manage their illness, and reestablish his or her community roles related to the following life domains: emotional, social, safety, housing, medical and health, educational, vocational and legal.

The State is in the process of implementing Peer Operated Respite Services (PORS), which would provide a temporary place for individuals experiencing urgent emotional distress and/or an emergent crisis to voluntarily stay overnight for an average of 3-4 days. These support services will be provided in a home-like environment operated by a Consumer-Run Organization with Certified Peer Support Specialists. Through mutual relationship-building, the PORS will create an opportunity for individuals served to learn and grow with the staff and to find ways to support one another, and remain connected and engaged in their own lives and communities. DMH/DD/SAS expects that PORS will be an effective early intervention to prevent hospitalization and facilitate recovery.

Please refer to the Environmental Factors and Plan – First Episode Psychosis for more information on recovery-oriented services for children with SED

4. Provide a description of recovery and recovery support services for individuals with substance use disorders in your state.

Please refer to the SUD Prevention and Treatment Block Grant Plan.

5. Does the state have any activities that it would like to highlight?

High Fidelity Wraparound
DMH/DD/SAS was the recipient of a four-year System of Care Expansion grant, which it used in partnership with LME-MCOs to pilot a High Fidelity Wraparound (HFW). HFW is an evidenced-informed supportive service carried out by a North Carolina Wraparound Team for youth ages 3-20 with serious emotional disturbance or a serious emotional disturbance and a co-occurring substance use disorder and/or intellectual/developmental disability.

In the first year of the HFW pilot (April 2015 – March 2016), the target included 50 North Carolina youth transitioning from Psychiatric Residential Treatment Facilities (PRTFs) to a community-based setting, such as biological parents, kinship care, DSS foster home, therapeutic foster care, and independent living. HFW strongly encourages and advocates for collaboration between services with the goal of reducing the number of meetings a family must attend and ensuring that all involved parties have the same information regarding treatment goals, progress, and any barriers that need to be addressed. The HFW team’s work includes conducting strength-based assessments, participating in the Child and Family Team held at the PRFT/Out-of-Home Placement and bringing community resources to include in the discharge planning process, developing the Child and Family Team that supports the family when the youth has returned to the home and community, and coordinating with the family to increase natural supports during the transition process. The Child and Family Team develops combined agendas and their work culminates in the creation of a comprehensive treatment plan that includes support in the youth’s school, home, and community.

There are currently five pilot sites that are working with youth and families, and the pilot teams are collecting outcomes in addition to completing consistent SAMHSA and Observation Measures Surveys with their families and youths to assess the effectiveness and impact of HFW pilot.

Transitions to Community Living Initiative

Transitions to Community Living Initiative (TCLI) is the product of a 2012 settlement between the United States Department of Justice and the State of North Carolina. TCLI focuses on the goal of recovery and community inclusion, supported through the mental health consumer movement’s advocacy on the roles of self-determination and peer supports to enhance quality of life.

Individual Placement and Support

A component of TCLI is the Individual Placement Support- Supported Employment (IPS-SE) evidence-based, behavioral health service for adults with SMI and co-occurring M/SUD. IPS teams take a holistic approach to finding competitive employment, by learning about their career goals, determining barriers to achieving those goals and working together to overcome those barriers, co-developing a person-centered plan, working together on their job search, and continuing to provide support after securing employment. Of note, IPS is unique in that the job search is centered around the preferences of the person as opposed to market availability, and following-along with the person after securing employment to address any challenges to their continued employment. By co-creating custom plans based on the aspirations and wants of people served, they are more likely to find lasting employment and feel like valued members of the community.

There are currently 36 IPS teams providing the service across the state. DMH/DD/SAS actively partners with the Division of Medical Assistance and the Division of Vocational Rehabilitation to ensure that fidelity based practice is supported by all divisions. DMH/DD/SAS also partners with stakeholder groups, including: NAMI and Employment First NC to increase awareness of IPS-SE across the state and ensure that these stakeholder groups have information to advocate for this service. DMH/DD/SAS and The UNC Center for Excellence in Community Mental Health provides training and technical assistance to IPS teams. Finally, North Carolina is a member of the Rockville Institute IPS Learning Community, which provides technical assistance and support not only from other states and countries implementing this service, it provides a direct means of communication with the organization that developed and researched this model.

Feedback received from community meetings and trainings indicates that the employment focus and employment first philosophy is a major paradigm shift for North Carolina’s system of care. There is clearly a need for hands-on systematic training and mentorship to understand the model and shift agency practices. There is also need for stronger focus on removing barriers, such as “readiness thinking,” through continuing education and research dissemination, and on improving benefits counseling with individuals and their families, as well as improving job development using the dual customer approach with employers.

DMH/DD/SAS is in the process of developing and piloting outcome-based reimbursement for IPS-SE services to incentivize providers to closely practice the IPS-SE model.

Assertive Community Treatment (ACT)

ACT is an evidence-based practice that is comprehensive and includes a multi-disciplinary clinical team that utilizes the expertise of medical, therapeutic, social work, vocational, substance abuse and peer support professionals to assist individuals diagnosed with SPMI to achieve and sustain recovery in the community of their choice. ACT services are holistic, frequent, intensive and provided directly in the community to enhance the overall quality of life through building self-confidence and proficiency across all domains of life functioning. ACT brings comprehensive psychiatric rehabilitation supports to individuals where they live to teach independent living skills to aid the individual in integrating into their community.

The UNC Center for Excellence in Community Mental Health provides training and technical assistance to ACT teams. The North Carolina ACT Coalition is a grassroots provider group that started in 2006, and has been coordinated by Dr. Lorna Moser since 2009, that meets every other month in the western and eastern regions of the state giving providers a resource for peer support,
advocacy, mentorship, and guidance.

Tenancy Support Services (TSS)  
The State ensures that TSS is provided to individuals transitioning to their own homes. Training for Tenancy Support staff is provided on psychiatric rehabilitation to assist individuals with learning skills to live and thrive in the community. DMH/DD/SAS works with the Center for Social Innovation’s T3 Training consultants, which provides easily accessible and highly tailored training. Trainings have been offered to LME-MCO TCL staff, housing specialists, care coordinators, peer support specialists, ACT teams and housing staff on Permanent Supportive Housing and Housing First models, motivational interviewing, working with landlords, conducting home visits, responding to crises, and the principles of the tenancy support approach.

Please indicate areas of technical assistance needed related to this section.

Environmental Factors and Plan

17. Community Living and the Implementation of Olmstead - Requested

Narrative Question
The integration mandate in Title II of the Americans with Disabilities Act (ADA) and the Supreme Court’s decision in Olmstead v. L.C., 527 U.S. 581 (1999), provide legal requirements that are consistent with SAMHSA’s mission to reduce the impact of M/SUD on America’s communities. Being an active member of a community is an important part of recovery for persons with M/SUD conditions. Title II of the ADA and the regulations promulgated for its enforcement require that states provide services in the most integrated setting appropriate to the individual and prohibit needless institutionalization and segregation in work, living, and other settings. In response to the 10th anniversary of the Supreme Court’s Olmstead decision, the Coordinating Council on Community Living was created at HHS. SAMHSA has been a key member of the council and has funded a number of technical assistance opportunities to promote integrated services for people with M/SUD needs, including a policy academy to share effective practices with states.

Community living has been a priority across the federal government with recent changes to section 811 and other housing programs operated by the Department of Housing and Urban Development (HUD). HUD and HHS collaborate to support housing opportunities for persons with disabilities, including persons with behavioral illnesses. The Department of Justice (DOJ) and the HHS Office for Civil Rights (OCR) cooperate on enforcement and compliance measures. DOJ and OCR have expressed concern about some aspects of state mental health systems including use of traditional institutions and other settings that have institutional characteristics to serve persons whose needs could be better met in community settings. More recently, there has been litigation regarding certain evidenced-based supported employment services such as sheltered workshops. States should ensure block grant funds are allocated to support prevention, treatment, and recovery services in community settings whenever feasible and remain committed, as SAMHSA is, to ensuring services are implemented in accordance with Olmstead and Title II of the ADA.

It is requested that the state submit their Olmstead Plan as a part of this application, or address the following when describing community living and implementation of Olmstead:

Please respond to the following items
1. Does the state’s Olmstead plan include:
   - Housing services provided.  Yes  No
   - Home and community based services.  Yes  No
   - Peer support services.  Yes  No
   - Employment services.  Yes  No

2. Does the state have a plan to transition individuals from hospital to community settings?  Yes  No

3. What efforts are occurring in the state or being planned to address the ADA community integration mandate required by the Olmstead Decision of 1999?
   Please indicate areas of technical assistance needed related to this section.

OMB No. 0930-0168 Approved: 04/19/2019 Expires: 04/30/2022

Environmental Factors and Plan

18. Children and Adolescents M/SUD Services - Required MHBG, Requested SABG

Narrative Question

MHBG funds are intended to support programs and activities for children and adolescents with SED, and SABG funds are available for prevention, treatment, and recovery services for youth and young adults with substance use disorders. Each year, an estimated 20 percent of children in the U.S. have a diagnosable mental health condition and one in 10 suffers from a serious emotional disturbance that contributes to substantial impairment in their functioning at home, at school, or in the community. Most mental disorders have their roots in childhood, with about 50 percent of affected adults manifesting such disorders by age 14, and 75 percent by age 24. For youth between the ages of 10 and 24, suicide is the third leading cause of death and for children between 12 and 17, the second leading cause of death.

It is also important to note that 11 percent of high school students have a diagnosable substance use disorder involving nicotine, alcohol, or illicit drugs, and nine out of 10 adults who meet clinical criteria for a substance use disorder started smoking, drinking, or using illicit drugs before the age of 18. Of people who started using before the age of 18, one in four will develop an addiction compared to one in twenty-five who started using substances after age 21. Mental and substance use disorders in children and adolescents are complex, typically involving multiple challenges. These children and youth are frequently involved in more than one specialized system, including mental health, substance abuse, primary health, education, childcare, child welfare, or juvenile justice. This multi-system involvement often results in fragmented and inadequate care, leaving families overwhelmed and children's needs unmet. For youth and young adults who are transitioning into adult responsibilities, negotiating between the child- and adult-serving systems becomes even harder. To address the need for additional coordination, SAMHSA is encouraging states to designate a point person for children to assist schools in assuring identified children are connected with available mental health and/or substance abuse screening, treatment and recovery support services.

Since 1993, SAMHSA has funded the Children’s Mental Health Initiative (CMHI) to build the system of care approach in states and communities around the country. This has been an ongoing program with 173 grants awarded to states and communities, and every state has received at least one CMHI grant. Since then SAMHSA has awarded planning and implementation grants to states for adolescent and transition age youth SUD treatment and infrastructure development. This work has included a focus on financing, workforce development and implementing evidence-based treatments.

For the past 25 years, the system of care approach has been the major framework for improving delivery systems, services, and outcomes for children, youth, and young adults with mental and/or SUD and co-occurring M/SUD and their families. This approach is comprised of a spectrum of effective, community-based services and supports that are organized into a coordinated network. This approach helps build meaningful partnerships across systems and addresses cultural and linguistic needs while improving the child, youth and young adult functioning in home, school, and community. The system of care approach provides individualized services, is family driven; youth guided and culturally competent; and builds on the strengths of the child, youth or young adult and their family to promote recovery and resilience. Services are delivered in the least restrictive environment possible, use evidence-based practices, and create effective cross-system collaboration including integrated management of service delivery and costs.

According to data from the 2015 Report to Congress on systems of care, services:

1. reach many children and youth typically underserved by the mental health system;
2. improve emotional and behavioral outcomes for children and youth;
3. enhance family outcomes, such as decreased caregiver stress;
4. decrease suicidal ideation and gestures;
5. expand the availability of effective supports and services; and
6. save money by reducing costs in high cost services such as residential settings, inpatient hospitals, and juvenile justice settings.

SAMHSA expects that states will build on the well-documented, effective system of care approach to serving children and youth with serious M/SUD needs. Given the multi- system involvement of these children and youth, the system of care approach provides the infrastructure to improve care coordination and outcomes, manage costs, and better invest resources. The array of services and supports in the system of care approach includes:

- non-residential services (e.g., wraparound service planning, intensive case management, outpatient therapy, intensive home-based services, SUD intensive outpatient services, continuing care, and mobile crisis response);
- supportive services, (e.g., peer youth support, family peer support, respite services, mental health consultation, and supported education and employment); and
residential services (e.g., like therapeutic foster care, crisis stabilization services, and inpatient medical detoxification).

66 The National Center on Addiction and Substance Abuse at Columbia University. (June, 2011). Adolescent Substance Abuse: America’s #1 Public Health Problem.

Please respond to the following items:

1. Does the state utilize a system of care approach to support:
   - a) The recovery and resilience of children and youth with SED?  
     - Yes □  No □
   - b) The recovery and resilience of children and youth with SUD?  
     - Yes □  No □

2. Does the state have an established collaboration plan to work with other child- and youth-serving agencies in the state to address M/SUD needs:
   - a) Child welfare?  
     - Yes □  No □
   - b) Juvenile justice?  
     - Yes □  No □
   - c) Education?  
     - Yes □  No □

3. Does the state monitor its progress and effectiveness, around:
   - a) Service utilization?  
     - Yes □  No □
   - b) Costs?  
     - Yes □  No □
   - c) Outcomes for children and youth services?  
     - Yes □  No □

4. Does the state provide training in evidence-based:
   - a) Substance misuse prevention, SUD treatment and recovery services for children/adolescents, and their families?  
     - Yes □  No □
   - b) Mental health treatment and recovery services for children/adolescents and their families?  
     - Yes □  No □

5. Does the state have plans for transitioning children and youth receiving services:
   - a) to the adult M/SUD system?  
     - Yes □  No □
   - b) for youth in foster care?  
     - Yes □  No □

6. Describe how the state provide integrated services through the system of care (social services, educational services, child welfare services, juvenile justice services, law enforcement services, substance use disorders, etc.)

NC DMHDDSAS has focuses its System of Care efforts in the following areas:

Improving Coordinated Care for Individual Youth and their Families
To improve the coordination of care for youth with the most complex needs, High Fidelity Wraparound is being piloted currently in five sites in North Carolina through both a SAMHSA-funded System of Care Grant and through a new legislative allocation to support recommendations from a Governor’s Task Force on Mental Health and Substance Use Disorders.

To improve care coordination for youth with moderate and high level needs, case management is embedded in the service definitions for community based services (Intensive In-Home Services, Multi-Systemic Therapy, and Day Treatment) and residential treatment. Youth in those services as well as youth in the custody of social service have a Child and Family Team comprised of the people who know the child best and who can be instrumental in supporting the child and family in identifying and meeting their needs. Within the last year, NC State Collaborative for Children, Youth, and Families has revised the training for Child and Family Teams and its attendant Training of Trainers to further support the coordination of care through Child and Family Teams.

Improving Coordination across Systems
To improve coordination across systems, NC has a structure of 73 Community Collaboratives and the statewide Collaborative for
Children, Youth and Families. The Community Collaboratives are staffed by 25 System of Care Coordinators employed by the behavioral health managed care organizations and partially funded through state funds. A statewide System of Care Coordinator supports the local System of Care Coordinators and is one of several DMHDDSAS liaisons with the State Collaborative.

Both the State Collaborative and the local Community Collaboratives work to identify barriers to coordination of care for multi-agency involved youth and address those barriers.

In addition, DMHDDSAS convened a Cross System Workgroup of mid-level managers from state agencies along with family representation to prioritize state level recommendations from a series of other workgroups and to develop an action plan to address shared priorities.

Improving Family Engagement and Support
DMHDDSAS contracts with a statewide family organization, NC Families United, to provide training and technical assistance on family engagement for individual family service planning as well as statewide policy making. NC Families United is heavily involved in state-level policy development and evaluation. DMHDDSAS also contracts with NC Families United for NC Youth Move as well as for youth leadership training.

The State SOC Coordinator works with local SOC Coordinators to improve their family and youth representation on local Community Collaboratives. The State Collaborative continues to promote its family-Driven Child and Family Team training which is co-trained by an agency and family member training team.

Enhancing and Improving the Array for Community Services
DMHDDSAS is preparing Medicaid and state funded service definitions to sustain its High Fidelity Wraparound pilots. The Governor’s Task Force recommended and the state legislature funded multiple pilot sites to integrate High Fidelity Wraparound, targeted case management, and MCO (Managed Care Organization) care coordination into a seamless system for juvenile justice and child welfare involved youth.

DMHDDSAS is also focusing on improving crisis services through start-up funding for three new child facility based crisis centers. In addition, DMHDDSAS is promoting behavioral health urgent care centers and is revising its mobile crisis definition to be more responsive to children’s needs.

DMHDDSAS has a multi-year partnership with the Center for Child and Family Health to provide learning collaboratives to train clinicians in evidenced based trauma interventions. The Center for Child and Family Health has focused on the following interventions: Trauma Focused Cognitive Behavior Therapy, SPARCS (Structured Psychotherapy for Adolescents Responding to Chronic Stress), Child Parent Psychotherapy, and Parent Child Interaction Therapy. This array of interventions provides age coverage from 0-18 years. By providing learning collaboratives that last from 12-18 months depending on the model and by supporting senior leaders within the provider agencies, the Center for Child and Family Health aims to ensure fidelity to these evidence based trauma models long after the initial training.

DMHDDSAS also aims to ensure that services are culturally and linguistically responsive. To that end, DMHDDSAS has started a Health Disparities Workgroup which has provided training and technical assistance to selected sites as they develop local plans to address health disparities their communities.

7. Does the state have any activities related to this section that you would like to highlight?

DMHDDSAS staff have been heavily involved in school based mental health workgroups which convened multiple listening sessions and have developed policy to support the development of and the referral system to behavioral health services. Increasing behavioral health services within schools will increase early identification and treatment of behavioral health concerns.

In addition, DMHDDSAS continues to spread Mental health First Aid training including the sponsoring two upcoming Youth Mental Health First Aid Instructor trainings for staff from the Department of Public Instruction.

DMHDDSAS is also a partner in a statewide structure to support local Juvenile Justice Substance Use Mental Health Partnerships which provide training in using local data and in evidence based interventions to improve services and supports for young people with behavioral health challenges within the juvenile justice system.

DMHDDSAS partners with the Division of Social Services in a variety of initiatives including a multi-county trauma informed care pilot (Project Broadcast), a Child Wellbeing Collaborative which was focused on system level improvement such as improved data sharing, and the development of DSS’ Performance Improvement Plan and overall DSS strategic plan following their federal review.

Please indicate areas of technical assistance needed related to this section.
Environmental Factors and Plan

19. Suicide Prevention - Required for MHBG

Narrative Question
Suicide is a major public health concern, it is the 10th leading cause of death overall, with over 40,000 people dying by suicide each year in the United States. The causes of suicide are complex and determined by multiple combinations of factors, such as mental illness, substance abuse, painful losses, exposure to violence, and social isolation. Mental illness and substance abuse are possible factors in 90 percent of the deaths from suicide, and alcohol use is a factor in approximately one-third of all suicides. Therefore, SAMHSA urges M/SUD agencies to lead in ways that are suitable to this growing area of concern. SAMHSA is committed to supporting states and territories in providing services to individuals with SMI/SED who are at risk for suicide using MHBG funds to address these risk factors and prevent suicide. SAMHSA encourages the M/SUD agencies play a leadership role on suicide prevention efforts, including shaping, implementing, monitoring, care, and recovery support services among individuals with SMI/SED.

Please respond to the following items:

1. Have you updated your state’s suicide prevention plan in the last 2 years? Yes ☐ No ☐

2. Describe activities intended to reduce incidents of suicide in your state.
   In addition to statewide awareness and gatekeeper training.
   Exploring and planning implementation of effective prevention strategies with the following populations:
   - School age students (legislation proposed for requiring suicide prevention training for all school personnel interfacing with students);
   - Veterans, National Guard, military members and family members (1 in 5 die by suicide in NC)
   - Those who experience Opioid Misuse and Overdose (counseling on access to lethal means-CALM; 1 in 6 are intentional deaths)
   - NCIOM Task Force study and recommendations regarding adolescents and older adults
   - Individuals experiencing crisis
   - Individuals in ED and those discharged
   - First responders

3. Have you incorporated any strategies supportive of Zero Suicide? Yes ☐ No ☐

4. Do you have any initiatives focused on improving care transitions for suicidal patients being discharged from inpatient units or emergency departments? Yes ☐ No ☐

5. Have you begun any targeted or statewide initiatives since the FFY 2018-FFY 2019 plan was submitted? Yes ☐ No ☐
If so, please describe the population targeted.
Exploring and planning implementation of effective prevention strategies with the following populations:
   - School age students (legislation proposed for requiring suicide prevention training for all school personnel interfacing with students);
   - Veterans, National Guard, military members and family members (1 in 5 die by suicide; 5 die weekly, more attempt in NC)
   - Those who experience Opioid Misuse and Overdose (counseling on access to lethal means-CALM; 1 in 6 are intentional deaths)
   - NCIOM Task Force study and recommendations regarding adolescents and older adults
   - Individuals experiencing crisis
   - Individuals in ED and those discharged
   - First responders
   - NC Tribal communities and youth experiencing behavioral health and life course challenges
   - Making connections with SUD and Opioid Misuse and Overdose and untreated trauma and suicide prevention
Please indicate areas of technical assistance needed related to this section.

Environmental Factors and Plan

20. Support of State Partners - Required for MHBG

Narrative Question
The success of a state’s MHBG and SABG programs will rely heavily on the strategic partnership that SMHAs and SSAs have or will develop with other health, social services, and education providers, as well as other state, local, and tribal governmental entities. Examples of partnerships may include:

- The SMA agreeing to consult with the SMHA or the SSA in the development and/or oversight of health homes for individuals with chronic health conditions or consultation on the benefits available to any Medicaid populations;

- The state justice system authorities working with the state, local, and tribal judicial systems to develop policies and programs that address the needs of individuals with M/SUD who come in contact with the criminal and juvenile justice systems, promote strategies for appropriate diversion and alternatives to incarceration, provide screening and treatment, and implement transition services for those individuals reentering the community, including efforts focused on enrollment;

- The state education agency examining current regulations, policies, programs, and key data-points in local and tribal school districts to ensure that children are safe, supported in their social/emotional development, exposed to initiatives that target risk and protective factors for mental and substance use disorders, and, for those youth with or at-risk of emotional behavioral and SUDs, to ensure that they have the services and supports needed to succeed in school and improve their graduation rates and reduce out-of-district placements;

- The state child welfare/human services department, in response to state child and family services reviews, working with local and tribal child welfare agencies to address the trauma and mental and substance use disorders in children, youth, and family members that often put children and youth at-risk for maltreatment and subsequent out-of-home placement and involvement with the foster care system, including specific service issues, such as the appropriate use of psychotropic medication for children and youth involved in child welfare;

- The state public health authority that provides epidemiology data and/or provides or leads prevention services and activities; and

- The state’s office of homeland security/emergency management agency and other partners actively collaborate with the SMHA/SSA in planning for emergencies that may result in M/SUD needs and/or impact persons with M/SUD conditions and their families and caregivers, providers of M/SUD services, and the state’s ability to provide M/SUD services to meet all phases of an emergency (mitigation, preparedness, response and recovery) and including appropriate engagement of volunteers with expertise and interest in M/SUD.

Please respond to the following items:

1. Has your state added any new partners or partnerships since the last planning period?  
   - Yes  
   - No

2. Has your state identified the need to develop new partnerships that you did not have in place?  
   - Yes  
   - No

If yes, with whom?

The SMHA has established a public academic liaison (PAL) with Duke University and law enforcement agencies among other community crisis coalition stakeholders, families and advocates in implementing a Pediatric Psychiatric Law Enforcement Transport Model Pilot to reduce trauma experienced by children, youth and young adults requiring psychiatric diagnostic services and/or transition to/from community services.

The SMHA is building a relationship with the National Center for Homeless Education and the NC Center for Homeless Education (SERVE) at UNC-Greensboro http://center.serve.org/hepnc/

The SMHA is working with partners to better address Children with Complex Needs https://www.ncdhhs.gov/about/department-initiatives/children-complex-needs

The SMHA is strengthening relationships with the State Independent Living Council and their networks across the state to promote IPS and benefits counseling in addition to working with family and youth peers and advocates to promote and sustain successful employment opportunities.

The state’s office of emergency management agency and other partners actively collaborate with the SMHA/SSA in planning for emergencies that may result in behavioral health needs and/or impact persons with behavioral health conditions and their families and caregivers, providers of behavioral health services, and the state’s ability to provide behavioral health services to meet...
all phases of an emergency (mitigation, preparedness, response and recovery) and including appropriate engagement of
volunteers with expertise and interest in behavioral health.

3. Describe the manner in which your state and local entities will coordinate services to maximize the efficiency, effectiveness, quality
and cost-effectiveness of services and programs to produce the best possible outcomes with other agencies to enable consumers
to function outside of inpatient or residential institutions, including services to be provided by local school systems under the
Individuals with Disabilities Education Act.

School Mental Health Initiative (SMHI) - The SMHA is actively working with state DPI and LEAs/IDEA and DMA-Medicaid in
exploring ways in which mental health services can become sustained and part of the child mental health service array, including
early childhood mental health consultation and related services for older school age students with behavioral health needs.

Education Services for children and youth in PRTFs (psychiatric residential treatment services) - The SMHA has actively established
contracts with PRTFs for the provision of educational services meeting NC DPI (public school) and IDEA requirements. Joint work
with NC DPI, Division of Exceptional Children (IDEA) and the NC Office of Non-Public Schools and the eligible licensed and
registered PRTFs. Joint training, implementation and monitoring of educational services is in place.

Early Childhood and Early Childhood Mental Health Consultation - The SMHA is an active partner in implementing three different
technical assistance awards in addressing challenging behaviors and intervening early with very young children who have serious
emotional and social development needs and whose families have complex needs. Services and supports are being defined across
agencies for this population. All departments and the legislature have studied and are interest in implementing and sustaining an
ECMH System of Care for young children across systems.

Cross-system workgroup- an interdepartmental child and family focused workgoup that includes family and youth members has
been established to promote common practice models, develop complementary services and supports, and problem solve in order
to work more efficiently with limited resources, especially for the most serious in need and those with complex needs.

Medicaid Reform - The 1115 Demonstration Waiver Application, also known as Medicaid Reform. Over the next 18 months or so,
CMS will review the application and discuss the reform plan in detail with the Department of Health and Human Services. Over the
next three to four years, the NC Department of Health and Human Services will work closely with people who receive Medicaid
services and their families, and with those that provide Medicaid and NC Health Choice services (such as doctors and hospitals) to
build the new Medicaid health care system. In the meantime, the Medicaid program will continue as usual, and beneficiaries will
receive care the same way they do now.

Please indicate areas of technical assistance needed related to this section.

Environmental Factors and Plan

21. State Planning/Advisory Council and Input on the Mental Health/Substance Abuse Block Grant Application- Required for MHBG

Narrative Question
Each state is required to establish and maintain a state Mental Health Planning/Advisory Council to carry out the statutory functions as described in 42 U.S. C. 300x-3 for adults with SMI and children with SED. To meet the needs of states that are integrating services supported by MHBG and SABG, SAMHSA is recommending that states expand their Mental Health Advisory Council to include substance misuse prevention, SUD treatment, and recovery representation, referred to here as an Advisory/Planning Council (PC). SAMHSA encourages states to expand their required Council's comprehensive approach by designing and implementing regularly scheduled collaborations with an existing substance misuse prevention, SUD treatment, and recovery advisory council to ensure that the council reviews issues and services for persons with, or at risk, for substance misuse and SUDs. To assist with implementing a PC, SAMHSA has created Best Practices for State Behavioral Health Planning Councils: The Road to Planning Council Integration.69

Planning Councils are required by statute to review state plans and implementation reports; and submit any recommended modifications to the state. Planning councils monitor, review, and evaluate, not less than once each year, the allocation and adequacy of mental health services within the state. They also serve as an advocate for individuals with M/SUD problems. SAMHSA requests that any recommendations for modifications to the application or comments to the implementation report that were received from the Planning Council be submitted to SAMHSA, regardless of whether the state has accepted the recommendations. The documentation, preferably a letter signed by the Chair of the Planning Council, should state that the Planning Council reviewed the application and implementation report and should be transmitted as attachments by the state.

Please consider the following items as a guide when preparing the description of the state's system:

1. How was the Council involved in the development and review of the state plan and report? Please attach supporting documentation (meeting minutes, letters of support, etc.) using the upload option at the bottom of this page.
   a) What mechanism does the state use to plan and implement substance misuse prevention, SUD treatment and recovery services?
      See letter of support
   b) Has the Council successfully integrated substance misuse prevention and treatment or co-occurring disorder issues, concerns, and activities into its work?

2. Is the membership representative of the service area population (e.g. ethnic, cultural, linguistic, rural, suburban, urban, older adults, families of young children)?

3. Please describe the duties and responsibilities of the Council, including how it gathers meaningful input from people in recovery, families, and other important stakeholders, and how it has advocated for individuals with SMI or SED.
   The Planning Council meets bi-monthly. The minutes of the Council meetings will reflect that the Council receives regular reports from NC DMH/DD/SAS on issues such as data and outcomes, trends analysis, needs assessment, service gaps, expenditures, and consumer perception of care and satisfaction. Each November a special meeting is held in which the Council reviews the annual report. During the SAMHSA application process, the Council is engaged in each meeting as noted by meeting minutes in framing plan components and priorities describing the service system. The Council's active work during meetings through the year, gathering input in between meetings from their spheres of influence, and public comments during each meeting as a standing item of their agenda, and then provided updates on the state plan, and prior to plan submission it is reviewed. The Council letter attached reflects careful consideration and recommendations. Minutes of the Council meetings will reflect these activities.
   Additionally, please complete the Behavioral Health Advisory Council Members and Behavioral Health Advisory Council Composition by Member Type forms.70

Footnotes:

70 There are strict state Council membership guidelines. States must demonstrate: (1) the involvement of people in recovery and their family members; (2) the ratio of parents of children with SED to other Council members is sufficient to provide adequate representation of that constituency in deliberations on the Council; and (3) no less than 50 percent of the members of the Council are individuals who are not state employees or providers of mental health services.

Re: letter from Carol to the State

Fax #: 919-755-2262
508-0962
August 21, 2019

Kody Kinsley
Deputy Secretary of N.C. Department of Health and Human Services
3001 Mail Center
Raleigh, NC 27699-3001

Dear Mr. Kinsley:

The North Carolina Mental Health Planning and Advisory Council (MHPAC) envisions a mental health system that works for everyone. The mission of NCMHPAC is to advise and make recommendations on the State Behavioral Health Plan(s) for services and programs for children and adults with serious mental health needs and their families. As a part of this mission, The North Carolina Mental Health Block Grant Planning and Advisory Council (MHBPGAC) has been reviewing the new two-year State Mental Health Block Grant Plan, which will provide outpatient services for adults with serious mental health disabilities and children with serious emotional disturbances (SED) for the 2020 – 2022 fiscal years. The Council has had an opportunity to ask questions of the NC Division of MH/DD/SAS planners during the most recent regularly scheduled MHBPGAC meeting and a subsequently scheduled teleconference.

This letter is written to both offer a summary of the work of the Council in reviewing the block Grant plan and report components during the past year and to offer recommendations regarding the SFy 20-22 plan. The Council’s meeting calendar was designed to align our focus on the block grant criteria, Domains and the three priority populations: review services and expenditures; receive reports from block grant recipients, and consider effective best practices across systems and individual and population-based outcomes for those living with serious mental illness (SMI), serious emotional disturbance (SED) and early serious mental illness and first episode psychosis (ESMI/FEP). We appreciate the division’s standing updates to the Council on overall state Medicaid and integrated health/behavioral health transformation and the Quality Management Team’s data analysis on outcomes and trends over time on perception of care, prevalence, penetration of services by population and providers, gaps and needs assessment, expenditures and outcomes by population and community-based services/supports provided. Each of these elements help inform the Council’s population-focused committee discussions and recommendations to the Division.

Members of the North Carolina Mental Health Block Grant Planning and Advisory Council offer the following input on the state mental health block grant plan, as well as the mental health service system in North Carolina:
The value of peer support has clearly been demonstrated. Data shows that peer support lowers mental health care costs and improves outcomes, reduces the need for inpatient care, and increases quality of life for people with a mental health disability. The MHBGPAC asks the state to expand peer support services, explore the innovative approaches to peer support happening in many other states, and consider looking at peer support services operated by mental health peer and consumer-run organizations in our state. More peer specialists, youth partners, and family partners are needed throughout the state. Include existing groups who are engaged in this arena. Also, members of the Council ask the state at ways to expand, increase, and improve the standards for peer support training, supervision, and delivery to align with the integrity of authentic peer support throughout the state.

The link between criminally involved people and the community behavioral health system must be strengthened. Studies confirm that transition coordination and support reduce recidivism and make our communities safer. The MHBGPAC urges the state to develop an outcome-based service support system for consumers of mental health services who are being released from incarceration, to include staff dedicated to conducting in-reach and connecting detainees and people reentering communities with behavioral health care services, collaboration between Medicaid, corrections and other agencies; and timely initiation and approval of applications for coverage to connect people with services and help end the cycle of incarceration. The Council would like to encourage the state to look at forensic peer support re-entry and peer bridgers models in order to reduce recidivism in falling back into the justice system.

The state must increase its efforts to build capacity and cultural competence for consumers of mental health services who are Deaf or hard of hearing and those who use American Sign Language (ASL), including but not limited to expanding the number of psychiatrists fluent in ASL.

Children with SED urgently require a continuum of services to address their needs and offer them an opportunity to be healthy and successful. North Carolina must redouble its efforts to provide a robust array of mental health services for children, specifically focusing on the availability of quality outpatient therapy, outpatient therapy plus, substance abuse intensive outpatient, and multisystemic therapy - services that are lacking for children in many parts of our state. Transportation to and from therapy, case management, care coordination and crisis services must also be widely available. Additionally, we are concerned about the recent defunding of the NC START program. The Council would like the state to look at the feasibility of adding innovative family preservation and reunification programs as a part of its continuum of care for children with SED.

Hurricanes and flooding are a stark reminder that we must zealously work to address disaster preparedness, recovery and resilience from a mental health perspective. Many individuals affected by such events experience trauma and need ongoing mental health services to
successfully overcome the challenges resulting from these disasters. Further, emergency shelter staff and other responders need training on trauma informed care and accommodating persons with disabilities.

Research indicates that integrated health care can enhance access to services, improve quality of care, lower overall health care expenditures and reduce depressive symptoms for older adults. Integrated health care for older adults, including those who have a substance disorder, must be expanded.

North Carolina’s guardianship policies and practices need reform. The state must energetically identify and implement the changes necessary to reduce guardianship for adults with serious and persistent mental illness.

Other recommendation that the Council would like to offer in implementation of statewide reforms also include:

- Clarify how the block grant and other state funds will be used to support a safety net for MHBG priority populations who are uninsured and under insured.
- Continue to review and adjust targets and measures for service goals and objectives.
- Identify ways to measure behavioral health success through interagency outcome measures (e.g. housing, employment, justice, child welfare, schools, etc.)
- Improve mechanisms to review plan components relative to the state reform and to meet federal requirements of the Council more in advance of the looming timeframes. Multiple webinars and state plan components are being held almost every two weeks with many changes proposed for standard and tailored plans for priority populations. It is challenging to keep up with these changes and have adequate time to make informed recommendations regarding use of block grant funds. In addition, other state system reforms are occurring which will also impact priority populations served, such as in schools, child welfare and juvenile justice with Raise the Age reform as an example.
- Include a summary of the housing continuum and housing support options and ways in which the Council can better advocate for safe healthy affordable inclusive options.
- Include supported education and supported employment options and funding and ways to advocate for more effective coordinated cross-agency efforts for success.
- Add additional information in the plan that summarizes broader acknowledgment of providers’ work in enhancing services and practices across the state.

The North Carolina Mental Health Block Grant Planning and Advisory Council appreciates the opportunity to inform and advise the state on the Mental Health Block Grant and on the adequacy of mental health services for children and adults throughout the state, in fulfilling its statutory duties. Appointed members of the Council bring a wealth of experience and wide variety of backgrounds to effectively discharge our duties. We look forward to continuing to
work with the state to ensure that a high quality, comprehensive mental health service delivery system is available to all residents and consumers of mental health services in North Carolina.

Sincerely,

[Signature]

Jeff McLeod
Chairperson of the NCMHPAC
Environmental Factors and Plan

Advisory Council Members
For the Mental Health Block Grant, there are specific agency representation requirements for the State representatives. States MUST identify the individuals who are representing these state agencies.

State Education Agency
State Vocational Rehabilitation Agency
State Criminal Justice Agency
State Housing Agency
State Social Services Agency
State Health (MH) Agency.

22. Public Comment on the State Plan - Required

Narrative Question

Title XIX, Subpart III, section 1941 of the PHS Act (42 U.S.C. § 300x-51) requires, as a condition of the funding agreement for the grant, states will provide an opportunity for the public to comment on the state block grant plan. States should make the plan public in such a manner as to facilitate comment from any person (including federal, tribal, or other public agencies) both during the development of the plan (including any revisions) and after the submission of the plan to SAMHSA.

Please respond to the following items:

1. Did the state take any of the following steps to make the public aware of the plan and allow for public comment?
   a) Public meetings or hearings?  
      ☐ Yes ☐ No
   b) Posting of the plan on the web for public comment?  
      ☐ Yes ☐ No  
      If yes, provide URL:  
      https://www.ncdhhs.gov/divisions/mhddsas/grants/mental-health-block-grant
   c) Other (e.g. public service announcements, print media)  
      ☐ Yes ☐ No
