Class Concept
Positions in this class plan, design, examine, analyze, develop, implement, administer, and monitor business and program processes, operation systems, and efficient business and financial systems for a large division of an agency or at the agency level. Positions evaluate business and program application systems’ functionality to identify gaps, and calculate solutions to improve business operations. Positions design business and program systems solutions by identifying and evaluating options, resolving solution issues, serving as a liaison between the business and the project team to improve productivity, and developing and delivering training. Work at this level may involve process improvement through automation of processes and implementation and management of key computer applications. Positions apply project management methodology. Positions in this class develop expertise in one or several business areas and their integration points and contribute to strategic planning of systems and technology directions.

Recruitment Standards

Knowledge, Skills, and Abilities
