

Class Concept

Employees in this class protect State property against damage and theft by making periodic rounds of assigned areas to determine if equipment, buildings and grounds are safe from fire, thievery, and similar hazards. Additional work assignments may include operation of a small heating plant and routine cleaning duties. General work assignments are performed according to an established routine. Irregular circumstances are reported immediately to the proper authority if a preliminary investigation appears to warrant such action. Prompt and thorough performance of duties is evaluated by a supervisor through examination of time clock records and observation of the extent to which property is actually protected.
